Description of Major ICs	1-20	Printed Circuit Boards	1-36
Internal Block Diagram		Schematic Diagrams	Insertion
of the Other ICs	1-25	Parts List	Separate-volume Insertion

Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage current check (Electrical shock hazard testing)
After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).

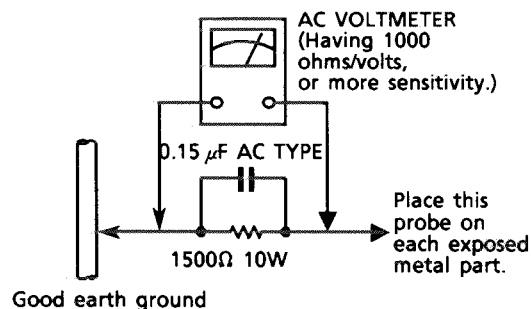

- Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor.

Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

Introduction

Become familiar with the main switches and controls on your RX-616RBK before use.

Switches, Buttons and Controls

Refer to the pages in parentheses for details.

Front Panel

- 1 Remote sensor
- 2 Display (10)
- 3 TA/NEWS/INFO button (17)
- 4 EON button (17)
- 5 MASTER VOLUME control (11)
- 6 LOUDNESS button (12)
- 7 FM MODE/MUTE button (14)
- 8 DISPLAY MODE button (15)
- 9 PTY SEARCH button (16)
- 10 PRESET/TUNING button (13, 14)
- 11 SOURCE SELECTOR (10)
- 12 POWER button (10)
- 13 Surround program buttons (18, 20, 22)
- 14 SURROUND ON/OFF button (18, 20, 22)
- 15 REAR LEVEL/CENTER LEVEL buttons (+/-) (21)
- 16 DELAY button (20)
- 17 TEST button (21)
- 18 CENTER MODE button (20)
- 19 CENTER TONE control (22)
- 20 BALANCE control (11)
- 21 TUNER CONTROL (13, 14, 16)
- 22 BASS control (11)
- 23 ENTER button (13)
- 24 TREBLE control (11)
- 25 SPEAKERS 1/2 buttons (11)
- 26 PHONES jack (12)
- 27 TAPE2 MONITOR button (10, 23)

Remote Control

- 1 POWER buttons (10, 24)
- 2 10 keys (13, 14, 24)
- 3 Source selecting buttons (FM/AM, CD, PHONO, TV/VIDEO) (10, 24)
- 4 Operating buttons for JVC audio/video components (24)
- 5 Source selecting buttons (TAPE1, TAPE2, VCR) (10, 24)
- 6 Surround adjustment buttons (20, 21)
- 7 SLEEP button (23)
- 8 CD-DISC button (24)
- 9 RDS buttons (15, 17)
- 10 VOLUME buttons (+/-) (10)

Getting Started

This section explains how to connect stereo components and speakers to the RX-616RBK, and how to connect the power supply.

Before Installation

General

- Be sure your hands are dry.
- Turn the power off to all components.
- Read the instructions supplied with the components you are going to connect.

Locations

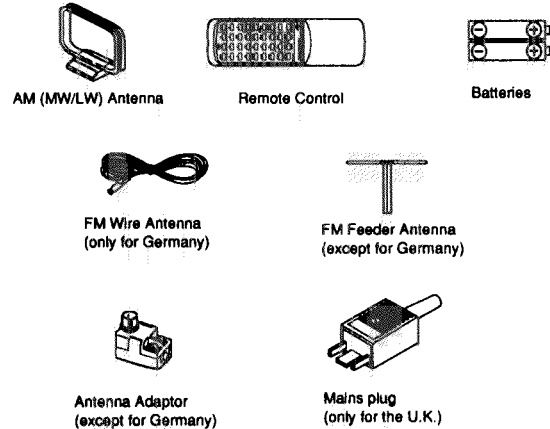

- Install the receiver in a location that is level and protected from moisture.
- The temperature around the receiver must be between 23° and 104° F (-5° and 40° C).
- Make sure there is good ventilation around the receiver. Poor ventilation could cause overheating and damage the receiver.

Handling the receiver

- Do not insert any metal object into the receiver.
- Do not disassemble the receiver or remove screws, covers, or cabinet.
- Do not expose the receiver to rain or moisture.

Checking the Supplied Accessories

Check to be sure you have all of the following items, which are supplied with the RX-616RBK.

If anything is missing, contact your dealer immediately.

Connecting the FM and AM (MW/LW) Antennas

FM Antenna Connections

For Germany

A Using the supplied wire antenna

The FM wire antenna supplied can be connected to the FM 75Ω COAXIAL as a temporary measure.

B Using the coaxial type connector (not supplied)

A 75-ohm antenna with coaxial type connector (DIN 45332) should be connected to the FM 75Ω COAXIAL terminal.

For Other European Countries

C Using the supplied feeder antenna

① Attach the feeder antenna to the supplied antenna adaptor as shown in the figure.

② Connect the antenna adaptor to the FM 75Ω COAXIAL terminal.

D Using FM 75-ohm antenna cable (not supplied)

① Open the claws at both sides and remove the cover.

② Move the conductor wire from ① to ② using tweezers or similar tool (only when using coaxial cable).

③ Fix the coaxial cable and its core.

④ Put on the cover.

⑤ Connect the supplied antenna adaptor to the FM 75Ω COAXIAL terminal.

Note:

Make sure the antenna conductors do not touch any other terminals, connecting cords and power cord. This could cause poor reception.

For Germany

Extend the supplied wire antenna horizontally.

For Other European Countries

Unfold the loops of the supplied FM feeder antenna and extend them as shown.

Fasten them up in the position which gives you the best FM reception.

If reception is poor, connect the outside antenna.

Before attaching a 75-ohm coaxial cable (the kind with a round wire going to an outside antenna), disconnect the supplied antenna.

How to strip the 75-ohm coaxial cable

1. Strip back the outside covering of the 75-ohm coaxial cable to expose the braided metallic mesh.
2. Pull the mesh back over the cable as shown.
3. Strip the insulation about 10 mm back from the central wire.
4. Attach to the supplied antenna adaptor, as shown in the diagram above.

AM (MW/LW) Antenna Connections

If reception is poor, connect an outdoor single vinyl-covered antenna to the terminal marked AM EXT.

Turn the loop until you have the best reception.

Snap the tabs on the loop into the slots of the base to assemble the AM (MW/LW) loop.

Note:

Even when connecting an outside AM (MW/LW) antenna, keep the indoor AM (MW/LW) loop antenna connected.

Connecting the Speakers

You can connect the following speakers:

- Two sets of front speakers to produce normal stereo sound
- One set of rear speakers to enjoy the surround effect
- One center speaker to produce more effective surround effect

For each speaker, connect one end of the speaker signal cable (not supplied) to the speaker terminal on the rear panel and the other end to the speaker.

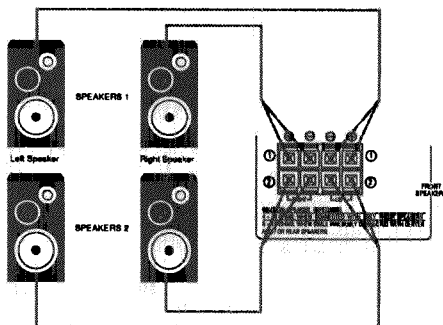

1. Open each terminal.
2. Insert the end of the speaker signal cable as shown (be sure to remove the insulation at the end of each wire first).
3. Close the terminals to clamp the speaker signal cables firmly in place.
4. Connect the black (-) and red (+) terminals on the rear panel to the black (-) and red (+) terminals marked on the speakers.

CAUTION:

Use speakers with the same impedance as marked near the terminals on the rear panel.

Connecting the front speakers

Connect the front speakers to the FRONT SPEAKERS terminals.

Connecting the rear and center speakers

Connect rear speakers to the REAR SPEAKERS terminals and center speaker to the CENTER SPEAKER terminal.

Note:

When you connect rear speakers, make sure that both left and right speakers are connected; otherwise, no sound will come out of the rear speakers.

About the speaker impedance of the speakers

CAUTION:

When connecting speakers, use the speakers with the SPEAKER IMPEDANCE indicated by the speaker terminals.

Notes:

- The required speaker impedance of the front speakers differs depending on whether or not a center and/or rear speakers are connected at the same time. Since there are four possible speaker connections with your RX-616RBK, check which one fits your case and use the speaker with the impedance described below.
- The required speaker impedance of the front speakers does not differ depending on whether both the FRONT SPEAKERS ① and FRONT SPEAKERS ② terminals are used or only one of them is used.

Connecting Audio/Video Components

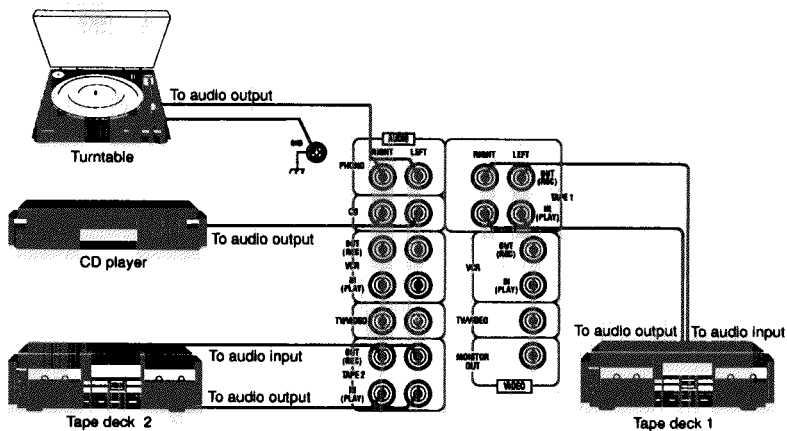

You can connect the following components to the receiver using cables with RCA pin plugs.

Audio Components	Video Components
• Turntable	• VCR
• CD player	• Video disc player
• Tape deck(s)	• TV

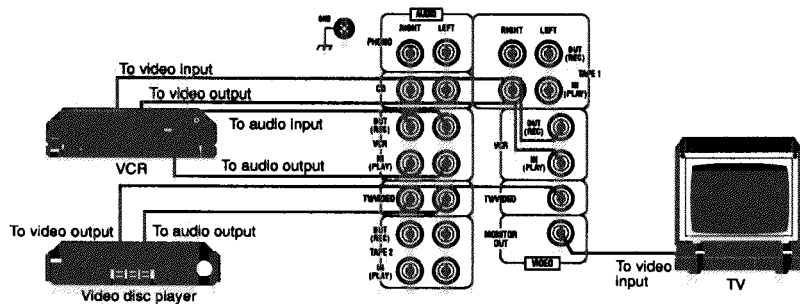

Notes:

- Both plugs and jacks are color-coded; the red ones are for right audio signals, the white ones for left audio signals, and yellow ones for video signals.
- Any turntables incorporating a small-output cartridge such as an MC (moving-coil type) must be connected to this amplifier through a commercial head amplifier or step-up transformer. Direct connection may result in insufficient volume.
- If a ground cable is provided for your turntable, connect the cable to the screw marked GND on the rear panel.

Audio component connections

Video component connections

Connecting Audio Components for the COMPU LINK-3 Remote Control System

The COMPU LINK-3 remote control system allows you to control other JVC audio components from the RX-616RBK or vice versa. To use this system, connect your JVC audio components and the RX-616RBK with the cable (monaural mini-plug) supplied with those components.

If your audio component has two COMPU LINK-3 SYNCHRO jacks, you can use either one. If it has only one COMPU LINK-3 SYNCHRO jack, connect it so that it is the last item in the series of components. (for example, the turntable in the diagram below)

Notes:

- The COMPU LINK-3 remote control system is the upgraded version of the COMPU LINK-1 and COMPU LINK-2. Even if your components has the COMPU LINK-1 or COMPU LINK-2 jacks, you can still connect it in the COMPU LINK-3 remote control system, but some functions may not work correctly.
- For more information about the COMPU LINK-3 (-1 and -2) remote control system, see page 25.

CAUTION:
The COMPU LINK-3 remote control system cannot control the tape deck connected to the TAPE2 jacks. Use only the tape deck connected to the TAPE1 jacks.

Power Supply through the RX-616RBK to a Connected Component

For Continental Europe

For the U.K.

You can use the AC outlet on the rear of the RX-616RBK to supply power to an audio component. This AC outlet is "switched" outlet. So when the RX-616RBK is off (that is, in standby mode), power is not supplied through this outlet. By turning the RX-616RBK on and off, you can turn the connected component on and off at the same time.

Note:

Do not use the AC outlet on the rear of the RX-616RBK to supply power to the component in the COMPU LINK remote control system; otherwise, the COMPU LINK remote control system may not work correctly.

The FUSE holder is provided near the AC OUTLET except for the U.K., Germany, and Italy.

Connecting the Power Cord

Before plugging the RX-616RBK into an AC outlet, make sure that all connections have been made. When the power cord is connected, the STANDBY indicator above the POWER button lights up.

Keep the power cord away from the connecting cables for the TV, VCR, and antenna. The power cord may cause noise or screen interference. We recommend that you use a coaxial cable to connect the antenna, since it is well-shielded against interference.

Notes:

- A small amount of power is always consumed even in standby mode. To switch off the power completely, unplug the power cord from the AC outlet.
- If the power cord is unplugged or a power failure occurs, preset settings will be erased in a few days.

CAUTIONS:

- Do not touch the power cord with wet hands.
- Do not pull on the power cord to unplug the receiver. When unplugging the receiver, always grasp the plug itself so as not to damage the cord.

Putting Batteries in the Remote Control

Before using the remote control, put two supplied batteries first.

1. On the back of the remote control, press down on the battery cover and slide it out.
2. Insert batteries. Make sure to observe the proper polarity: (+) to (+) and (-) to (-).
3. Slide the cover in.

If the range or effectiveness of the remote control decreases, replace the batteries. Use two R6P (SUM-3)/AA (15D) type dry-cell batteries.

CAUTIONS:

Follow these precautions to avoid leaking or cracking cells:

- Place batteries in the remote control so they match the polarity indicated: (+) to (+) and (-) to (-).
- Use the correct type of batteries. Batteries that look similar may differ in voltage.
- Always replace both batteries at the same time.
- Do not expose batteries to heat or flame.

Basic Operations

The following operations are commonly used when you play any sound source.

Turning the Power On and Off

On the front panel From the remote control

To turn on the power, press the POWER button on the front panel or the AUDIO button on the remote control. The STANDBY indicator goes off.

To turn off the power, press the POWER button or AUDIO button on the remote control again. The STANDBY indicator lights up.

Selecting a Source to Play

You need to select the source to listen to before you start playing any source.

On the front panel:

Turn the SOURCE SELECTOR so that the desired source name appears on the display (at the same time the arrow (▲) on the display points the source).

Selected source name appears

- VCR View the video component connected to the VCR jacks.
- TV/VIDEO View the video component connected to the TV/VIDEO jacks.
- FM Listen to an FM broadcast.
- AM Listen to an AM (MW/LW) broadcast.
- PHONO Listen to a record.
- CD Listen to the CD player.
- TAPE1 Listen to the tape deck connected to the TAPE1 jacks.

To listen to the tape deck connected to the TAPE2 jacks, press the TAPE2 MONITOR button so that the TAPE2 MONITOR indicator lights up on the display.

From the remote control:

Press the desired source selecting buttons.

- VCR View the video component connected to the VCR jacks.
- TV/VIDEO View the video component connected to the TV/VIDEO jacks.
- FM/AM* Listen to an FM or AM (MW/LW) broadcast. Each time you press the button, the band alternates between FM and AM (MW/LW).
- PHONO* Listen to a record.
- CD* Listen to the CD player.
- TAPE1* Listen to the tape deck connected to the TAPE1 jacks.
- TAPE2 Listen to the tape deck connected to the TAPE2 jacks.

Notes:

- The TAPE2 MONITOR button on the front panel and the TAPE2 button on the remote control have a different function from other source selecting buttons, since this function allows you to monitor the recording. For more details, see "Recording Monitor" on page 23.
- When you press one of the source selecting buttons marked above with an asterisk, the RX-616RBK automatically turns on.

Selecting the Front Speakers

When you have connected two sets of front speakers, you can select which to use. Pressing in the SPEAKERS 1 or SPEAKERS 2 button activates the respective set of speakers.

To use the set of speakers connected to the FRONT SPEAKERS ① terminals, press in the SPEAKERS 1 button (ON), and press out the SPEAKERS 2 button (OFF).

To use the set of speakers connected to the FRONT SPEAKERS ② terminals, press in the SPEAKERS 2 button (ON), and press out the SPEAKERS 1 button (OFF).

To use both sets of speakers, press in both the SPEAKERS 1 and 2 buttons (ON).

To use neither set of speakers, press out both the SPEAKERS 1 and 2 buttons (OFF).

Note:

When only one set of the front speakers is connected to either the FRONT SPEAKERS ① or ② terminals, do not press in both SPEAKERS 1 and 2 buttons (ON). If you do, no sound comes out of the front speakers.

Adjusting the Volume

On the front panel

From the remote control

On the front panel:

To increase the volume, turn the MASTER VOLUME control clockwise.

To decrease the volume, turn it counterclockwise.

From the remote control:

To increase the volume, press the VOLUME + button.

To decrease the volume, press the VOLUME - button.

CAUTION:

Always set the MASTER VOLUME control to the minimum before starting any source. If the MASTER VOLUME control is left turned up, the sudden blast of sound energy can permanently damage your hearing and/or ruin your speakers.

Adjusting the Speaker Output Balance

If the sounds you hear from the right and left speakers are unequal, you can adjust the speaker output balance with the BALANCE control.

To decrease the left channel sound, turn the BALANCE control clockwise.

To decrease the right channel sound, turn it counterclockwise.

Adjusting the Tone

You can increase or decrease the amount of bass and treble reinforcement.

Adjusting the bass

To increase the bass reinforcement, turn the BASS control clockwise.

To decrease the bass reinforcement, turn it counterclockwise.

When set to the FLAT position, no bass reinforcement is applied.

Adjusting the treble

To increase the treble reinforcement, turn the TREBLE control clockwise.

To decrease the treble reinforcement, turn it counterclockwise.

When set to the FLAT position, no treble reinforcement is applied.

Listening at Low Volume (Loudness)

Human ears are not sensitive to bass at low volume. To compensate for this, the loudness function automatically boosts the bass level as you lower the volume.

To use the loudness function, press the LOUDNESS button. The LOUDNESS indicator lights up on the display.

To turn the function off, press the LOUDNESS button again. The LOUDNESS indicator goes off.

Recording a Source

You can record any source playing through the RX-616RBK to the tape decks connected to the TAPE1 and TAPE2 jacks, and the VCR connected to the VCR jacks at the same time.

While recording, you can listen to the selected sound source at whatever sound and tone settings you like, without affecting the sound levels of the recording.

Notes:

- When recording from the tape deck connected to the TAPE2 jacks to the one connected to TAPE1, press TAPE2 MONITOR button and select a source other than TAPE1.
- The output volume level, tone adjustments, as well as surround effects cannot affect the recording.
- See also "Recording Monitor" on page 23.

CAUTION:

Be sure the EON indicator (see page 17) is off before you start recording. If the indicator is on, the recording source will be changed temporarily when the EON indicator starts blinking.

Listening with Headphones

A standard pair of headphones can be connected to the PHONES jack on the front panel. Be sure to turn down the volume before connecting or putting on headphones, as high volume can damage both the headphones and your hearing.

To listen with only headphones

Press out both the SPEAKERS 1 and 2 buttons (OFF).

Receiving Radio Broadcasts

You can browse through all the stations or use the preset function to go immediately to a particular station.

Tuning in Stations Manually

1. Select the band.

On the front panel:

Turn the SOURCE SELECTOR.

From the remote control:

Press the FM/AM button so that the last received station of the last received band is tuned in. Each time you press the button, the band alternates between FM and AM (MW/LW).

2. Press the PRESET/TUNING button to set the tuning mode to the manual mode.

Each time you press the button, the tuning mode alternates between the preset mode and manual mode. (When shipped from the factory, the tuning mode is initially set to the manual mode.)

3. Turn the TUNER CONTROL clockwise or counterclockwise.

Turning it clockwise increases the frequency.

Turning it counterclockwise decreases the frequency.

Notes:

- When you turn the TUNER CONTROL fast, the frequency keeps changing until you turn the TUNER CONTROL again.
- When a station of sufficient signal strength is tuned in, the TUNED indicator lights up on the display.
- When an FM stereo program is received, the STEREO indicator also lights up.

Using the Preset Tuning

Once a station is assigned to a channel number, the station can be quickly tuned. You can preset up to 40 stations at random.

Storing the preset stations

1. Tune in the station you want to preset (see above).

2. Press the ENTER button.

"CH- ——" appears on the display for 5 seconds.

3. Select a channel number within the 5 seconds.

On the front panel:

Turn the TUNER CONTROL

From the remote control:

Press the +10 button and the 10 keys.

Examples: For channel number 5, press 5. For channel number 15, press +10 then 5.

For channel number 20, press +10 then 10.

Note:

When you use the remote control, be sure that the +10 button and the 10 keys are activated for tuner, not for the CD. (See page 24.)

4. Press the ENTER button again while the selected channel number is blinking on the display. "MEMORY" appears, and the station is assigned to the selected channel number.

To cancel a stored preset station

Storing a new station on a used number erases the previously stored one.

CAUTION:

Preset stations may be erased when power is cut off to the receiver, as when it is unplugged from the AC outlet or a power failure occurs. If the preset stations are lost, simply set the stations again using the above procedure.

Tuning in a Preset Station

On the front panel:

1. Turn the SOURCE SELECTOR to select either FM or AM (MW/LW). The last received station of the selected band is tuned in.

Note:

If you see a channel number on the display, the RX-616RBK is already in the preset mode, skip step 2 below.

2. Press the PRESET/TUNING button to set the tuning mode to the preset mode.

3. Turn the TUNER CONTROL to select a preset channel number.

Turning it clockwise changes preset channels in increasing order.

Turning it counterclockwise changes preset channels in decreasing order.

On the remote control:

1. Press the FM/AM button.

Press the FM/AM button so that the last received station of the last selected band will be tuned in.

Each time you press the button, the band alternates between FM and AM (MW/LW).

2. Press the +10 button and the 10 keys to select a preset channel number.

Examples: For channel number 5, press 5. For channel number 15, press +10 then 5.

For channel number 20, press +10 then 10.

Note:

When you use the remote control, be sure that +10 button and the 10 keys are activated for tuner, not for the CD. (See page 24.)

Selecting the FM Reception Mode

You can change the FM reception mode so that reception will be improved.

When an FM stereo broadcast is hard to receive or noisy

Press the FM MODE/MUTE button on the front panel. The MUTE AUTO indicator goes off on the display. Reception will improve although you will lose the stereo effect. In this mode, you will hear noise while tuning into the stations.

To restore stereo effect

Press the FM MODE/MUTE button again so that the MUTE AUTO indicator lights up on the display. In this mode, when a program is broadcast in stereo, you will hear stereo sound; when in monaural, you will hear monaural sounds. This mode is also useful to suppress static noise between stations.

Using the RDS (Radio Data System) to Receive FM Stations

RDS allows FM stations to send additional signals along with their regular program signals. For example, the stations send their station names, and information about what type of program they broadcast, such as sports or music, etc.

When tuned to an FM station which provides the RDS service, the RDS indicator lights up.

With the RX-616RBK, you can receive the following types of RDS signals.

PS (Program Service):	shows station names commonly known
PTY (Program Type):	shows types of broadcast programs
RT (Radio Text):	shows text messages the station sends
TA (Traffic Announcement):	shows traffic announcement is being broadcast

What information can RDS signals provide?

You can see the RDS signals the station sends on the display.

To show the RDS signals on the display:

Press the DISPLAY MODE button while listening to an FM station.

Each time you press the button, the display changes to show you the following information:

PS (Program Service):

While searching, "PS" appears and then the station names will be displayed. "NO PS" appears if no signal is sent.

PTY (Program Type):

While searching, "PTY" appears and then the type of the broadcast program will be displayed. "NO PTY" appears if no signal is sent.

RT (Radio Text):

While searching, "RT" appears and then text messages the station sends will be displayed. "NO RT" appears if no signal is sent.

Station Frequency:

Station frequency (non-RDS service.)

Notes:

- If searching finishes at once, "PS", "PTY", and "RT" will not appear on the display.
- If you press the DISPLAY MODE button while listening to an AM (MW/LW) station, the display only shows station frequency.
- RDS is not available in AM (MW/LW) broadcasts.

On characters displayed

When the display shows PS, PTY, or RT signals, the following characters are used.

- The display cannot differentiate upper case and lower case letters and always uses upper case letters.
- The display cannot show accented letters; therefore, "A", for instance, may stand for accented "A's" like "Å, Ä, Å, Å, Å, and Å."

A	Å, Ä, Å, Å, Å, Å	K	K	U	U, Ö, Ü, Ü, Ö	0	0	*	*	<	<
B	B	L	L	V	V	1	1	+	+	>	>
C	Ç, Ç, Ç	M	M	W	W	2	2	--	--	=	=
D	D, D	N	N, Ñ	X	X	3	3	,	,	\	\
E	E, É, É, É, É, É	O	Ö, Ö, Ö, Ö, Ö, Ö	Y	Y	4	4	.	.	'	'
F	F	P	P	Z	Z, Z, Z	5	5	/	/		
G	G	Q	Q			6	6	--	--		
H	H	R	R, R, R			7	7	--	--		
I	I, I, I, I, I	S	S, S, S			8	8	--	--		
J	J	T	T			9	9				

To search the program by PTY codes

PTY SEARCH

TUNER CONTROL

ENTER

One of the advantages of the RDS service is that you can locate a particular kind of program by specifying the PTY codes.

To search a program using the PTY codes: (Possible only on the front panel)

1. Press the PTY SEARCH button while listening to an FM station. The display alternates between "PTY" and "SELECT."
2. Turn the TUNER CONTROL clockwise or counterclockwise to select a PTY code. The display gives you the PTY codes described below.
3. Press the ENTER button. While searching, the display alternates between "SEARCH" and the selected PTY code. The RX-616RBK searches 40 preset channels, stops when it finds the one you have selected, and tunes in that station.

To continue searching after the first stop, press the PTY SEARCH button again while the indications on the display blink.

If no program is found, "NOT FOUND" appears on the display.

To stop searching any time during the process

Using any tuner operating buttons and controls will stop searching.

Descriptions of the PTY codes

- NEWS:** News
- AFFAIRS:** Topical program expanding on the current news or affairs
- INFO:** Programs on medical service, weather forecast, etc.
- SPORT:** Sports events
- EDUCATE:** Educational programs
- DRAMA:** Radio plays
- CULTURE:** Programs on national or regional culture
- SCIENCE:** Programs on natural sciences and technology
- VARIED:** Other programs like comedies or ceremonies
- POP M:** Pop music
- ROCK M:** Rock music
- M.O.R. M:** Middle-of-the-road music (usually called "easy listening")
- LIGHT M:** Light music
- CLASSICS:** Classics
- OTHER M:** Other music
- NONE:** Undefined (this cannot be searched.)

When an emergency broadcast (ALARM signal) is sent from an FM station

The RX-616RBK automatically switches the source to FM and tunes in the station except in the following cases:

- When you are listening to non-RDS stations (all AM (MW/LW) and some FM stations).
- When the power to the RX-616RBK is turned off.

While receiving an emergency broadcast, "ALARM" appears on the display.

To switch to a broadcast program of your choice temporarily

Another convenient RDS service is called "EON (Enhanced Other Network)." This allows the RX-616RBK to switch temporarily to a broadcast program of your choice (NEWS, TA, and/or INFO) from other sources *except the following cases*:

- When you are listening to a non-RDS station (all AM (MW/LW) stations and some FM stations)
- When the last received FM station is a non-RDS station.

To select the program type

Press the TA/NEWS/INFO button on the front panel. Each time you press the button, the display changes to show the following:

TA: Traffic Announcement
 NEWS: News
 INFO: Programs on medical service, weather forecast, etc.

To use the EON function

Press the EON button either on the front panel or on the remote control. The EON indicator lights up on the display, and the RX-616RBK enters EON standby mode.

<p>CASE 1 If there is no station broadcasting the program you have selected</p> <p>The RX-616RBK continues playing the current source.</p> <p>When a station starts broadcasting the program you have selected, the RX-616RBK automatically switches to the station. The EON indicator starts blinking.</p> <p>When the program is over, the RX-616RBK goes back to the currently selected source, but still remains in EON standby mode.</p>	<p>CASE 2 If there is a station broadcasting the program you have selected</p> <p>The RX-616RBK stops playing the current source, and tunes in the program. The EON indicator starts blinking.</p> <p>When the program is over, the RX-616RBK goes back to the currently selected source, but still remains in EON standby mode.</p>
--	---

To stop listening to the program selected by EON

Press the EON button again so that the EON indicator goes off on the display. The RX-616RBK enters EON off mode and goes back to the currently selected source. Each time you press the button, the EON mode alternates between standby mode and off mode.

Notes:

- In EON standby mode, if you change the source to AM or if you carry out synchronized recording (see page 25), EON standby mode is canceled temporarily. The RX-616RBK goes back to EON standby mode again when you have finished that operation.
- While listening to a program tuned in by the EON function, you can only use the POWER, EON, and DISPLAY MODE buttons.
- When the RX-616RBK is turned off, the EON function is also turned off.

CAUTION:

When the source alternates intermittently between the station tuned in by the EON function and the currently selected source, press the EON button to cancel the EON function (the EON indicator goes off on the display). This is not the malfunction of the RX-616RBK.

Using the Surround Processor

The built-in surround processor provides three types of sound programs --- Dolby Pro Logic, Dolby 3-Channel Logic, and JVC's Hall Surround.

What is surround?

The sound heard in a concert hall or a movie theater consists of direct sound and indirect sound: early reflections and reverberations. The reflected sound and the reverberations are always delayed by the distances of the ceiling and walls from the listener. The early reflections and reverberations are some of the most important elements of the acoustic surround.

On JVC's Hall Surround

In order to reproduce a more realistic sound field in your listening room while playing an ordinary stereo source, JVC's Hall Surround has been designed to give you clear vocals and to create the feeling of a concert hall. The sound is reproduced through the front speakers and rear speakers.

On Dolby Surround

The Dolby Surround has been also developed to reproduce these important elements at home.

To watch the soundtracks of video software bearing the mark * which includes the same encoded surround information as found in Dolby Stereo films, the RX-616RBK can provide you with 2 Dolby Surround programs (Dolby Pro Logic and Dolby 3CH Logic).

Dolby Pro Logic: Select this mode when the optional rear speakers are connected.

Dolby 3ch Logic: Select this mode when no rear speakers are connected.

Both modes can be used either with or without a center speaker.

Note:

The surround processor has no effect on monaural sources.

* Manufactured under license from Dolby Laboratories Licensing Corporation. DOLBY and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

Using JVC's Hall Surround

You need to connect one set of rear speakers to obtain the full effect.

On the front panel:

1. Press SURROUND ON/OFF button.

One of the surround program indicators (PRO LOGIC, 3CH LOGIC, or HALL) lights up on the display.

2. Press HALL.

From the remote control:

1. Press the ON/OFF button on the SURROUND section.

One of the surround program indicators lights up.

2. Press the MODE button on the SURROUND section repeatedly until the HALL indicator lights up on the display.

To cancel the Hall Surround, press the SURROUND ON/OFF button (or the ON/OFF button on the remote control) again.

Note:

You can also adjust the delay time (see step 4 on page 20) and the sound level of the rear speakers (see step 6 on page 21) for Hall Surround. Once you have adjusted the delay time for the Hall Surround, the RX-616RBK memorizes the setting.

Speaker arrangements

The following illustrations show how to obtain the optimum sound environment for various Dolby Surround settings. Try to find the speaker direction and location to create the optimum sound field.

CASE 1 When you have added a center speaker and rear speakers

In this case:

1. Select PRO LOGIC.
2. Select NORMAL or WIDE for center mode.

See page 20 for more details.

CASE 2 When you have added rear speakers

In this case:

1. Select PRO LOGIC.
2. Select PHANTOM for center mode.

See page 20 for more details.

CASE 3 When you have added a center speaker (without rear speakers)

In this case:

1. Select 3CH LOGIC.
2. Select NORMAL or WIDE for center mode.

See page 20 for more details.

Preparing for the Dolby Surround

The RX-616RBK memorizes two sets of Dolby Surround adjustments; one for Pro Logic and the other for 3ch Logic. However, the sound levels of center and rear speakers cannot be stored separately.

1. Set the surround mode on.

On the front panel:

Press the SURROUND ON/OFF button so that one of the surround program indicators lights up on the display.

From the remote control:

Press the ON/OFF button on the SURROUND section so that one of the surround program indicators lights up on the display.

2. Select either PRO LOGIC or 3CH LOGIC.

On the front panel:

Press the PRO LOGIC button or the 3CH LOGIC button.

From the remote control:

Press the MODE button on the SURROUND section.

Each time you press the button, the surround program changes as follows:

PRO LOGIC: when you use the rear speakers

3CH LOGIC: when you use no rear speakers

HALL: This is JVC's original surround program, and is different from the Dolby Surround. To use this, see page 18.

3. Press the CENTER MODE button.

Each time you press the CENTER MODE button, the mode changes as follows.

PHANTOM: Select this mode when you don't use a center speaker.

NORMAL: Select this mode when the size of the center speaker is smaller than that of the front speakers.

WIDE: Select this mode when the size of the center speaker is the same as that of the front speakers.

OFF: Select this mode to shut off the output of the center channel signal.

Note:

When you have selected 3CH LOGIC in step 2 above, you cannot select PHANTOM.

4. Press the DELAY button to set the delay time of the delayed sound.

Each time you press the button, the delay time changes among 3 levels.

DELAY-1: When your distance to the rear speakers is greater than that to the front speakers.

DELAY-2: When your distance to your rear speakers is almost equal to that to the front speakers.

DELAY-3: When your distance to your rear speakers is less than that to the front speakers.

Note:

When you have selected 3CH LOGIC in step 2 above, you cannot adjust the delay time.

On the front panel

From the remote control

5. Press the TEST button to check your setting.

When you press the button, "TEST" starts blinking and a test tone comes out of speakers in the following order:

On the front panel

From the remote control

6. Set the levels of center and rear speakers.

On the front panel:

Press the CENTER LEVEL +/- button to set the sound level of the center speaker, and Press the REAR LEVEL +/- button to set the sound level of the rear speakers.

From the remote control:

Press the CENTER +/- button while pressing the LEVEL CONTROL button to set the sound level of the center speaker, and Press the REAR +/- button while pressing the LEVEL CONTROL button to set the sound level of the rear speakers.

Notes:

- You can adjust these levels in 2 dB steps within the range of ± 20 dB. The sound levels of the left and right rear speakers will be the same.
- You cannot set the sound level of the rear speakers when you have selected 3CH LOGIC.
- You cannot set the sound level of the center speaker when you select PHANTOM or OFF for center mode.
- Although the sound levels of center and rear speakers can be stored, they are not stored separately for each surround program.

7. Press the TEST button again to finish the preparation.

The test tone stops.

Using the Dolby Surround

Once you have set the Dolby Surround adjustments you can use the same adjustments (except the sound level setting for the center and rear speakers) every time you want to enjoy Dolby Surround.

On the front panel:

1. Press the SURROUND ON/OFF button so that one of the surround program indicators lights up on the display.
2. Press either the PRO LOGIC or 3CH LOGIC button if the surround program indicator you want does not light up.
3. Play a sound source which was processed with Dolby Surround and is labeled with **DOLBY SURROUND** mark.

From the remote control:

1. Press the ON/OFF button on the SURROUND section so that one of the surround program indicator lights up on the display.
2. Press the MODE button on the SURROUND section repeatedly if the surround program indicator you want does not light up. Each time you press the button, the display changes to show the following:

3. Play a sound source which was processed with Dolby Surround and is labeled with **DOLBY SURROUND** mark.

To make dialogues in movies softer or clearer

By using the CENTER TONE control you can adjust the level of mid-frequency range, which the human voice is mostly made up of.

To make dialogues clearer, turn the control toward SHARP.

To make them softer, turn the control toward SOFT.

When set to the FLAT position, no adjustment is applied.

Note:

The CENTER TONE control cannot be used when sounds do not come out of the center speaker.

Other Features

The RX-616RBK has some other features like recording monitor function and sleep timer. By using these useful features, your audio life will be much improved.

Recording Monitor

If the tape deck connected to the TAPE2 jacks is of the three-head type, you can compare the sound quality of the playing source and of the recording being made on the tape deck.

On the front panel

From the remote control

To use the recording monitor function

Press the TAPE2 MONITOR button on the front panel or the TAPE2 button on the remote control. The TAPE2 MONITOR indicator lights up on the display. You can hear the sound just recorded on the tape.

To cancel recording monitor function

Press the TAPE2 MONITOR button or the TAPE 2 button again. The TAPE2 MONITOR goes off, and you hear the sound from the source playing.

Notes:

- Refer also to the manual supplied with your tape deck.
- Do not press the TAPE2 MONITOR button if no component is connected to the TAPE 2 jacks; otherwise, no sound comes out of the speakers

Sleep Timer

Using the sleep timer, you can fall asleep to music and know the RX-616RBK will turn off by itself rather than play all night.

To set the sleep timer

Press the SLEEP button on the remote control repeatedly while playing a source. The SLEEP indicator blinks on the display.

Each time you press the button, the shut-off time shown on the display changes as shown below:

The RX-616RBK will turn off after the time you have set.

To check or change the time remaining until the shut-off time

Press the SLEEP button once. The remaining time is displayed in minutes. If you press the button repeatedly, you can change the shut-off time.

To cancel the sleep timer

Press the SLEEP button repeatedly until the SLEEP indicator goes off.

Using the Remote Control

You can operate JVC's audio and video components with this receiver's remote control, since control signals for JVC components are preset in the remote control.

To operate these components with the remote control, first select a source with the source selecting buttons on the remote control. Then, operate that source using the remote control.

Note:

If you choose a source on the receiver directly, the remote control will not operate that source. To operate a source with the remote control, the source must be selected using buttons on the remote control.

After pressing the FM/AM button, you can perform the following operations:

FM/AM Alternates between FM and AM (MW/LW).

- 1 — 10, +10 Selects a preset channel number directly
- To select channel number 5, press 5. For channel number 15, press +10, then 5. For channel number 20, press +10, then 10.

After pressing the CD button, you can perform the following operations on a CD player:

- ▶ Starts playing
- ◀ Returns to the beginning of the current track
- ▶▶ Skips to the beginning of the next track
- Stops playing
- 1 — 10, +10 Selects a track number directly
- To select track number 5, press 5. For track number 15, press +10, then 5. For track number 20, press +10, then 10.

After pressing the TAPE1 button, you can perform the following operations on a tape deck:

- ▶ Starts playback
- ◀ Returns to the beginning of the current track
- ▶▶ Skips to the beginning of the next track
- Stops operation

After pressing the VCR button, you can perform the following operations on a VCR:

- ▶ Starts playback
- Stops operation

Note:

You can also turn the VCR and TV on and off by pressing the VCR or TV button in the POWER section of the remote control.

After pressing the CD-DISC button, you can perform the following operations on a CD player-changer:

- 1 — 6, P Select the number of a disc installed in a CD player-changer. Then continue to operate the CD player as described above.

COMPU LINK Remote Control System

The COMPU LINK remote control system allows you to operate JVC audio components through the remote sensor on the RX-616RBK.

To use this remote control system, you need to connect JVC audio components through the COMPU LINK-3 SYNCHRO jacks (see page 8) in addition to the connections using cables with RCA pin plugs (see page 7). This remote control system allows you to use four functions listed below.

■ Remote Control through the Remote Sensor on the RX-616RBK

You can control all components through the remote sensor on the RX-616RBK using this remote control. For details, see page 24.

Note:

Aim the remote control directly at the remote sensor on the RX-616RBK.

■ Automatic Source Selection

When you press the play (▶) button on a connected component or on its own remote control, the RX-616RBK automatically turns on and changes the source to the component. On the other hand, if you select a new source on the RX-616RBK or the remote control, the selected component begins playing immediately. In both cases, the previously selected source continues playing without sound for a few seconds.

■ Automatic Power On/Off (only possible with the COMPU LINK-3 connection)

Both the CD player and tape deck turns on and off along with the RX-616RBK.

When you turn on the RX-616RBK, the CD player or tape deck will turn on automatically, depending which component has been previously selected.

When you turn off the RX-616RBK, both the CD player and tape deck will turn off. Refer also to the manuals supplied with your CD player and tape deck.

■ Synchronized Recording

Synchronized recording means the tape deck starts recording as soon as a CD or record begins playing.

To use synchronized recording, follow these steps:

- 1 Put a tape in the tape deck, and a disc in the CD player (or a record on the turntable).
- 2 Press the record (●) button and the pause (⏸) button on the tape deck at the same time. This puts the tape deck into recording pause.

Note:

If you do not press the record (●) button and pause (⏸) button at the same time, the synchronized recording feature will not operate.

- 3 Press the play (▶) button on the CD player or on the turntable.

The source changes on the RX-616RBK, and as soon as play starts, the tape deck starts recording. When the play ends, the tape deck enters recording pause, and stops 4 seconds later.

Notes:

- You cannot carry out synchronized recording while receiving a program selected by EON (see page 17).
- During synchronized recording, the selected source cannot be changed.
- If your CD player is playing in program mode, a 4-second blank is recorded between tracks so that the music scan feature of your tape deck can be used on the recorded tape.
- If the power of any component is shut off during synchronized recording, the COMPU LINK remote control system may not operate properly. In this case, you must start again from the beginning.

Troubleshooting

Use this chart to help you solve daily operational problems. If there is any problem you cannot solve, contact your JVC service center.

PROBLEM	POSSIBLE CAUSE	SOLUTION
The display does not light up	The power cord not plugged in	Plug the power cord into an AC outlet
No sound from speakers	Speaker wires not connected	Check speaker wiring and reconnect if necessary
	The SPEAKERS buttons are not set correctly	Press the SPEAKERS buttons in or out correctly
	An incorrect source is selected	Select the correct source
Sound from one speaker only	The TAPE2 MONITOR indicator lights up when no component is connected to the TAPE2 jacks	Press the TAPE2 MONITOR button so that the indicator goes off
	Speaker wires are not connected properly	Check speaker wiring and reconnect if necessary
Continuous hiss or buzzing during FM reception	The BALANCE control is set to one extreme	Adjust the BALANCE properly
	Incoming signal is too weak	Adjust the antenna
	The station is too far away	Select a new station
The source alternates between an FM station and the currently selected source	An incorrect antenna is used	Check with your dealer to be sure you have a correct antenna
	Antennas are not connected properly	Check connections
Occasional cracking noise during FM reception	An incorrect EON signal are being sent	Press the EON button so that the EON function is off, and that the EON indicator goes off
Howling during record playing	Ignition noise from automobiles	Move the antenna farther from automobile traffic
Remote control does not work	Your turntable is too close to speakers	Move speakers away from the turntable
	There is an obstruction in front of the remote sensor on the RX-616RBK	Remove the obstruction
	Batteries are weak	Replace batteries

Specifications

Amplifier

Output Power	At Stereo operation	65 watts per channel, min. RMS, both channels driven into 4 ohms at 1 kHz with no more than 0.9% total harmonic distortion (IEC268-3/DIN).
		50 watts per channel, min. RMS, both channels driven into 8 ohms at 1 kHz with no more than 0.9% total harmonic distortion (IEC268-3/DIN).
	At Surround operation	50 watts per channel, min. RMS, both channels driven into 8 ohms, 20 Hz to 20 kHz with no more than 0.06% total harmonic distortion.
	Front Channels	60 watts per channel, min. RMS, driven into 8 ohms at 1 kHz with no more than 0.7% total harmonic distortion.
	Center channel	60 watts, min. RMS, driven into 8 ohms at 1 kHz, with no more than 0.7% total harmonic distortion .
	Rear channels	15 watts per channel, min. RMS, driven into 8 ohms at 1kHz, with no more than 0.7% total harmonic distortion
Total Harmonic Distortion (8 ohms, 1 kHz)		0.06 %* at 50 watts output (* Measured by JVC Audio Analysis System)
Frequency Response (8 ohms)	PHONO CD,TAPE1,TAPE2,VCR,TV/VIDEO	20 Hz to 20 kHz (± 0.5 dB) 10 Hz to 30 kHz (+0, -1 dB)
Signal-to-Noise Ratio (‘66 IHF/DIN)	PHONO CD,TAPE1,TAPE 2,VCR,TV/VIDEO	71 dB/66 dB (at REC OUT) 91 dB/67 dB (at REC OUT)
RIAA Phono Equalization		± 0.5 dB (20 Hz to 20 kHz)
Audio Input Sensitivity/ Impedance (1 kHz)	PHONO CD,TAPE1,TAPE2,VCR,TV/VIDEO	2.5 mV/47 k ohms 200 mV/47 k ohms
Audio Output Level	TAPE1,TAPE2,VCR	200 mV
Tone Control Range	BASS TREBLE	+8 ± 2 dB, -8 ± 2 dB (at 100 Hz) +8 ± 2 dB, -8 ± 2 dB (at 10 kHz)
Video Input Sensitivity/ Impedance	VCR,TV/VIDEO	1 Vp-p/75 ohms
Video Output Level	VCR,TV/VIDEO,MONITOR OUT	1 Vp-p (at 1 Vp-p input)
Synchronization		negative
Signal-to-Noise Ratio		45 dB

FM tuner (IHF)

Tuning Range		87.5 MHz to 108.0 MHz
Usable Sensitivity		10.8 dBf (0.95 μ V/75 ohms)
50 dB Quieting Sensitivity	Monaural Stereo	16.3 dBf (1.8 μ V/75 ohms) 38.3 dBf (22.5 μ V/75 ohms)
Signal-to-Noise Ratio (IHF-A weighted)	Monaural Stereo	80 dB at 85 dBf 73 dB at 85 dBf
Total Harmonic Distortion	Monaural Stereo	0.15 % at 1 kHz 0.2 % at 1 kHz

Stereo Separation at REC OUT	40 dB at 1 kHz
Capture Ratio	1.5 dB (10 mV / 300 ohms)
Alternate Channel Selectivity	60 dB: (± 400 kHz)
Frequency Response	30 Hz to 15 kHz: (+0.5 dB, -3 dB)

AM tuner

Tuning Range	MW:	522 kHz to 1,629 kHz
	LW:	144 kHz to 288 kHz
Usable Sensitivity	Loop antenna	300 μ V/m at 1,000 kHz
	External antenna	30 μ V at 1,000 kHz
Signal-to-Noise Ratio		50 dB (100mV/m, at 1,000 kHz)

General

Power Requirements	Continental Europe:	AC 230V [~] , 50 Hz
	Great Britain:	AC 240V [~] , 50 Hz
Power Consumption		280 watts
		5 watts (in standby mode)
Dimensions (W x H x D)		435 x 156 x 405 mm
		(17 ³ / ₁₆ x 6 ³ / ₁₆ x 16 inches)
Weight	Continental Europe:	10.6 kg (23.4 lbs)
	Great Britain:	11 kg (24.3 lbs)

Technical Explanation

1. Outline

RDS (Radio Data System) means the system to transmit control signal such as frequency information for tuning, traffic information and so on.

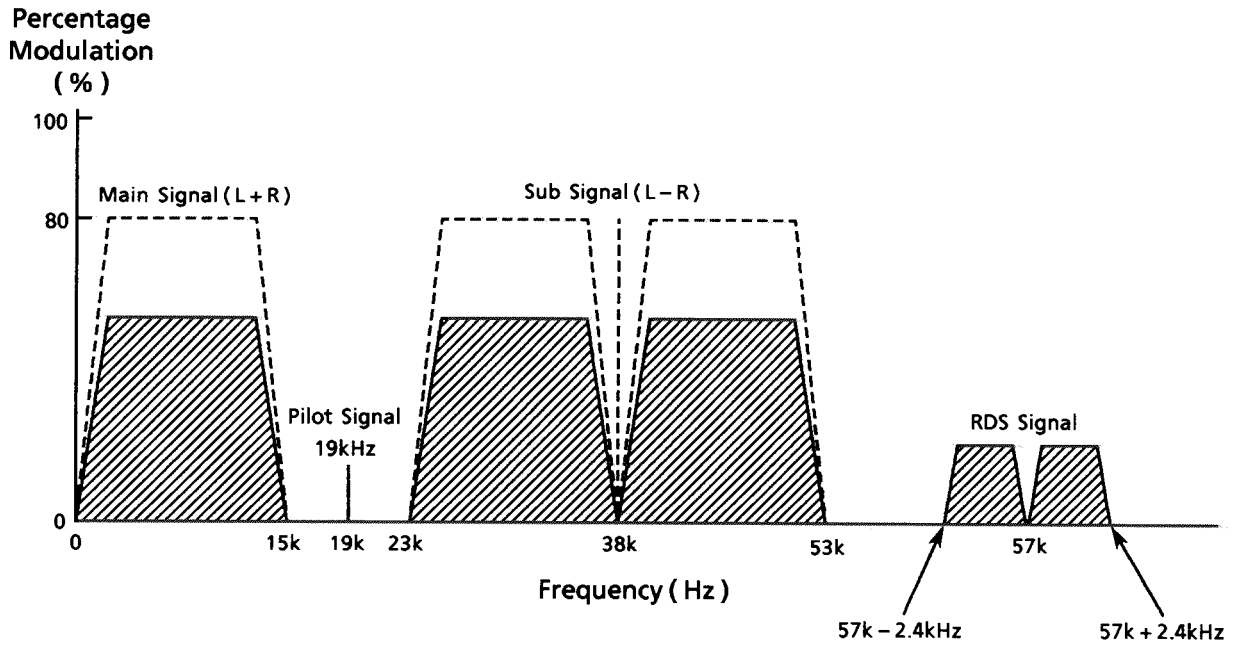

RDS signal which is DSB modulated at sub carrier frequency of 57kHz is FM modulated into main carrier signal.

Table-1 shows the details for RDS signal.

Figure 1 shows the frequency spectrum at RDS signal and stereo modulated (composite) signal.

[Table-1] RDS signal's Specification

	Item	Specification
Modulation Form	Sub Carrier Frequency	57kHz
	Sub Carrier Modulation Form	Duble Sideband Carrier Suppression Amplitude Modulation
	Frequency Deviation	RDS only : $\pm 2\text{kHz}$ TRI: $\pm 1.2\text{kHz}$
	Data Modulation Form	Two Phase PSK (Phase Shift Keying)
	Data Coding Form	Differential Coding
	Occupied Bandwidth	$57\text{kHz} \pm 2.4\text{kHz}$ ($\sqrt{100\%}$ cosine roll off Characteristic
Data Form	Bit late	1,187.5bit/s
	Error correcting	(26,16) Reduction Cyclic Code
	1 Block	26bit
	1 Group	104bit (4 block)
	Synchronism Form	Offset ward

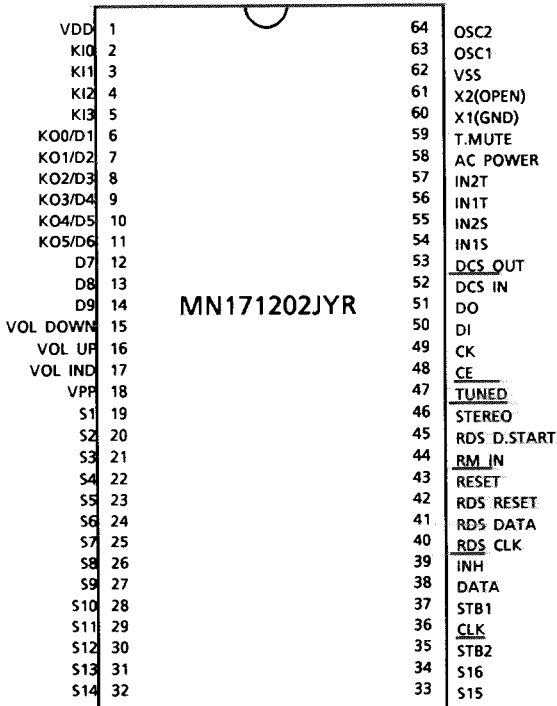

[Fig. 1] Frequency Spectrum at RDS signal & Stereo modulated Signal

■ LC7218 (IC121) : PLL Synthesizer

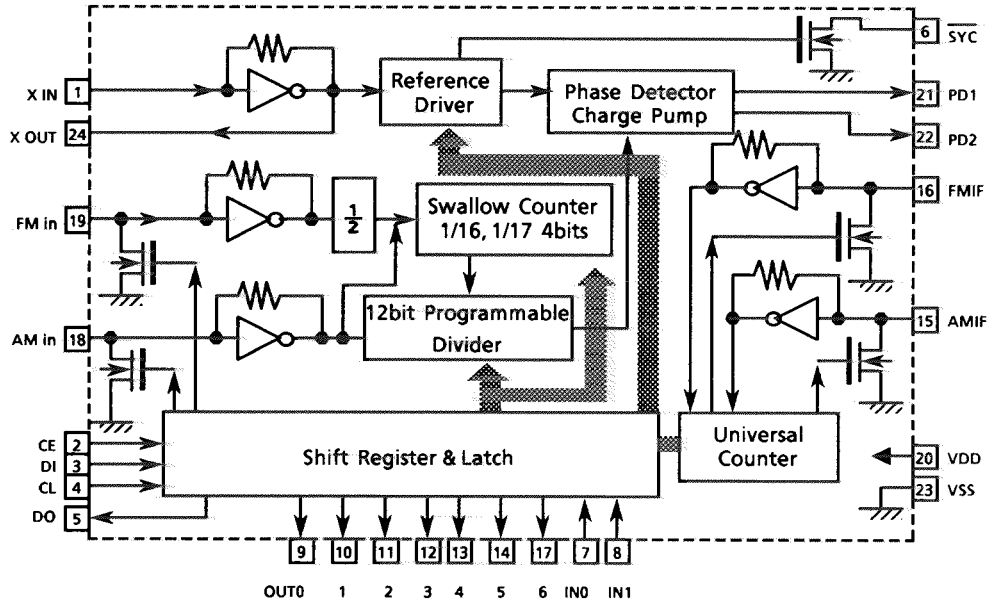

1. The main function descriptions

- (1) It makes the local oscillation frequency by the control data from IC201.
- (2) Decode the control signal and transmit the signal for receiving conditions.
- (3) For the best tuning, count the internal-frequency and transmit the data to IC201.

2. Terminal Layout

3. Block Diagram

4. Pin Functions

Pin No.	Symbol	I/O	Functions
1,24	X in , X out	I/O	Crystal oscillator (7.2MHz).
2	CE	I	Fix the chip enable to "H" when inputting (Di) and outputting (DO) the serial data.
3	DI	I	Receive the control data from the controller (IC201).
4	CL	I	This clock is used to synchronize data when transmitting the data of Di and DO.
5	DO	O	Transmit the data from LC7218 to the controller which is synchronized with CL.
6	SYNC	-	Not used.
7	TUNED	I	Receive the tuned signal from IC102 (LA1836).
8	STOP IN	-	Connected to GND
9	POWER	-	Not used.
10	QSC	-	Not used.
11	MONO	O	It is "H" on FM-monaural, "L" on FM-Stereo.
12	FM	O	It is "L" on FM mode.
13	MW	O	It is "L" on MW mode.
14	LW	O	It is "L" on LW mode.
15	AM-IF	I	Universal counter input for AM-IF from IC102 (LA1836).
16	FM-IF	I	Universal counter input for FM-IF from IC102(LA1836).
17	IF REQ	O	Output the "IF-signal request" to IC102 when the pin-7 (tuned in) goes to "H".
18	AMOSC	I	Input the local oscillator signal of AM.
19	FMOSC	I	Input the local oscillator signal of FM.
20	V _{DD}	-	This is a terminal of power supply.
21	PD1	O	PLL charge pump output : When the local oscillator signal frequency is higher than the reference frequency high level signals will output. When it is lower than the reference frequency, low level signals will output. When it is same as reference frequency signals, it will be floating.
22	PD2	-	Not used.
23	V _{SS}	-	Connected to GND

RX-616RBK

LA1836M (IC102) : FM AM IF AMP & detector

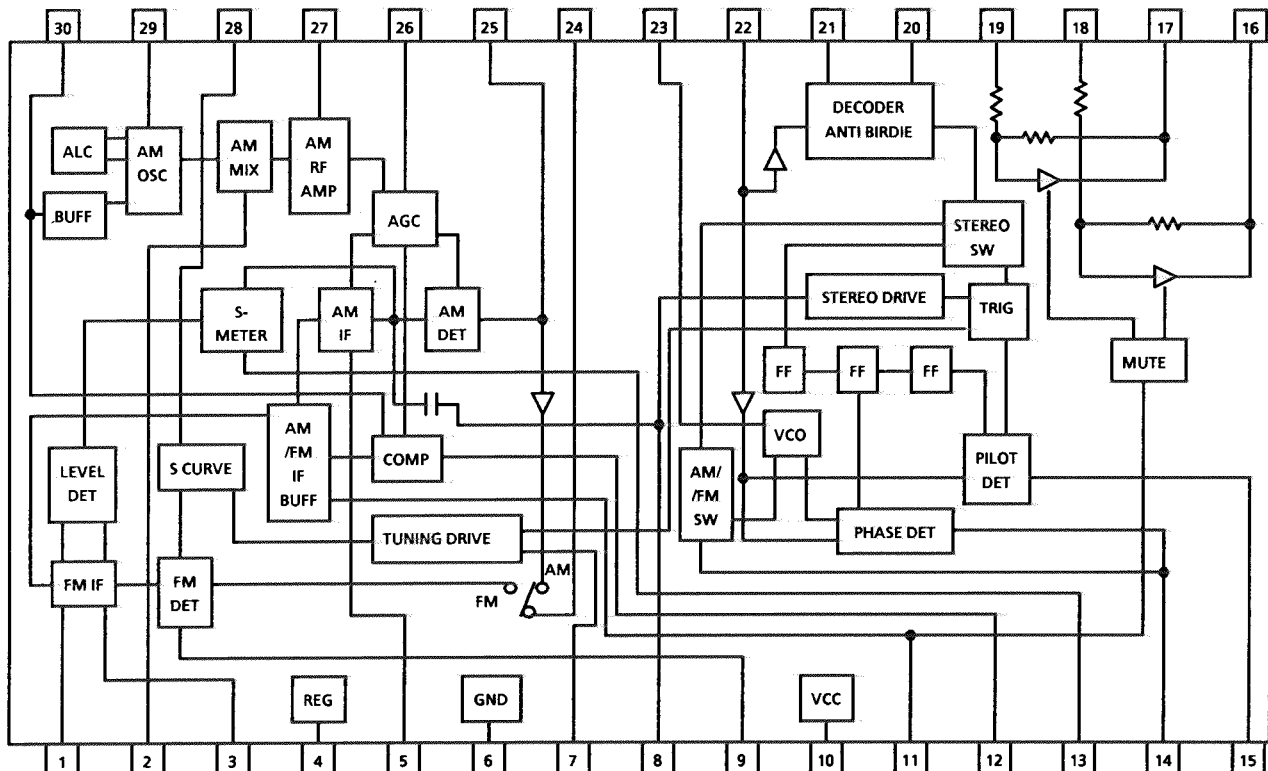

1. Terminal Layout

3. Pin Function

Pin No.	Symbol	I/O	Function
1	FM IN	I	This is an input terminal of FM IF Signal.
2	AM MIX	O	This is an output terminal for AM mixer.
3	FM IF	I	Bypass of FM IF
4	REG	-	Register value between pin4 and pin28 desides the frequency width of the input signal.
5	AM IF	I	Input of AM IF Signal.
6	GND	-	This is the device ground terminal.
7	SIG	O	When the set is tunning ,this terminal becomes "L".
8	ST/AM IF	O	Stereo indicator output. Stereo : "L", Mono : "H"
9	FM DET	-	FM detect transformer.
10	VCC	-	This is the power supply terminal.
11	FM/AM IF	O	When the signal of IF REQ of IC121(LC7218) appear, the signal of FM/AM IF output.
12	VSM	O	S Meter output and adjust AM SD sensitivity.
13	AM C.F.	I	This is a terminal of AM ceramic filter.
14	FM/AM	I	Change over the FM /AM input. "H" : FM, "L" : AM
15	MONO/ST	O	Stereo : "H", Mono : "L"
16	L OUT	O	Left channel signal output.
17	ROUT	O	Right channel signal output
18	L IN	I	Input terminal of the Left channel post AMP.
19	R IN	I	Input terminal of the Right channel post AMP.
20	MPX LOUT	O	Mpx Left channel signal output.
21	MPX ROUT	O	Mpx Right channel signal output.
22	MPX IN	I	Mpx input terminal.
23	VCO	I	Voltage controlled oscillator terminal.
24	DET OUT	O	AM/FM detection output.
25	AM DET	-	AM low cut adjustment.
26	AM AGC	I	This is an AGC voltage input terminal for AM.
27	AM RF	I	This is an input terminal for AM RF signal.
28	AFC	-	This is an output terminal of voltage for FM-AFC.
29	AM OSC	-	This is a terminal of AM Local oscillation circuit.
30	OSC BUFFER	O	AM Local oscillation Signal output.

■ M50198P(IC602) : Digital Delay IC

1. Explanation of the operation

Audio signal is input to LPF1 to reduce the high frequency components. The output from LPF1 is coded to 1 bit signal by ADM modulator and comparator with inside .This digital signal is input to main control logic. And this signal obtain various effect,and is written in SRAM .At the same time main control logic read the data from SRAM ,and input it to ADM demodulator .The ADM demodulator converts 1bit signal to analog signal.The analog signal is input to LPF2 to reduce the suprius components,and output to Pin 13.

- LPF1 Reject the high frequency components which is contained the input signal and unnecessary.
- LPF2 Reject the suprius components which is generated by the ADM demodulation by using with comparator.
- OP1,CC1 For ADM modulator.
- OP2,CC2 For ADM demodulator.

DISASSEMBLY PROCEDURES

■ Removing The Top Cover

1. Remove the 4 screws fastening both sides of top cover, and the 2 screws fastening the rear side.
2. Remove the top cover.

■ Removing The Bottom Cover

1. Remove the 12 screws **A** and **Ⓛ**.
2. Remove the bottom cover.

- ※ The screw **Ⓛ** which secures the bottom cover is also used for ground. It is necessary to ground before checking after the bottom cover is removed. (See Fig.-3.)

■ Removing The Front Panel Assembly

1. Remove the 3 screws **Ⓒ** fastening top of the front panel, and the 4 screws **Ⓑ** fastening bottom of the bottom cover.
2. Remove the master volume knob **Ⓧ**, and **Ⓨ** knobs.
3. Remove the nut fastening the master volume.
4. Remove the front panel disconnecting some wires.

■ Removing The Front P.C. Board

1. Removing the front panel Assembly.
2. Remove the **Ⓩ** knobs.
3. Remove the 9 screws **ⓐ**.
4. Remove the front P.C. Board.

■ Removing The Tuner P.C. Board

1. Remove all screws **ⓑ** and **ⓓ** installed at rear panel.
2. Take it out.

- ※ 3pcs. of the screw **ⓓ** which secure the rear panel are also used for ground. Installing of those screws is required before checking.

■ Removing The Power Transistor

1. Remove the top cover and bottom cover.
2. Unsolder the broken transistor.
3. Remove the some screws fastening it.
4. Remove it.

ADJUSTMENT PROCEDURES

■ Tuner section

Tuning range

Area	Renge		
	LW(Kz)	MW(Kz)	FM(Mz)
The U.K., Continetal Europe	144~288	522~1629	87.5~108

(1) Tuning Voltage

Confirm the voltages in the table at TP101. If voltages are not satisfied, replace T111 for MW and for LW or FE101 for FM.

FM Tuning voltage (Unit: V)

Area	Freqency	
	87.5MHz	108MHz
The U.K., Continetal Europe	1.6 ± 1.0	8.0 ± 2.0

AM Tuning voltage (Unit: V)

Area	Fregency(MW)		Fregency(LW)	
	522KHz	1629KHz	144KHz	288KHz
The U.K., Continetal Europe	1.0 > 0.5	7.5 < 8.5	1.0 > 0.5	5.0 < 7.5

(2) FM Center meter

Receive a broadcast by using the function of 'AUTO STOP'.

Adjust T141 (Detector coil) so taht the voltage at TP102 becomes $0 \pm 1.5\text{mV}$.

■ Power Amplifier section

■ Idling current

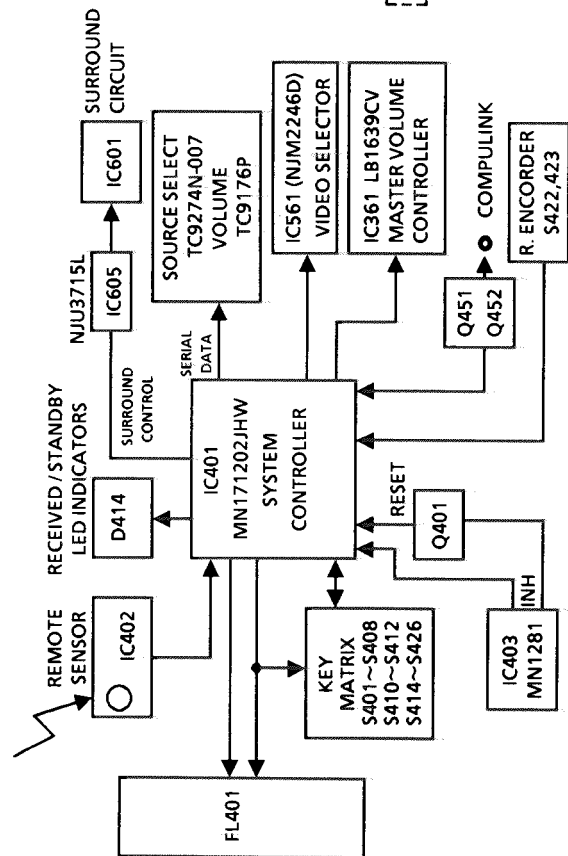

- (1) Set the volume control to minimum during this adjustment.
- (2) Turn R791 and R792 fully counterclockwise to warm up before adjustment. If the heatsink is already warm from previous use the correct adjustment can not be made.
- (3) Connect a DC voltmeter to R773 resistor's leads for left channel, or to R774 for right channel.
- (4) Adjust R773 for left channel, or R774 for right channel, so that the DC voltmeter becomes 2mV~7mV.
