## GENERAL / SYSTEM SET-UP

### INTRODUCTION

#### SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

### ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

### SYSTEM SET-UP

### PERSONNEL SAFETY

The following precautions are recommended for personnel safety:

- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- This equipment should be serviced by a qualified technician only.

### SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained within.

# OPERATING FEATURES

## 1. Operation Features

The TK-2140 is a VHF FM radio designed to operate in both trunking format and conventional format. The programmable features are summarized.

### ■ Trunking Format

This format can handle up to 32 systems with up to 250 groups in each system. The transceiver can be used in both trunked mode and conventional mode. Systems, groups, and their functions are programmed.

### ■ Conventional Format

This format can handle up to 250 groups with 250 channels in each group.

The transceiver can be used only in conventional mode. Groups, channels, and their functions are programmed.

## 2. Transceiver Controls and Indicators

### 2-1. Physical Layout

#### ① Antenna connector

Connect an (optional) antenna here.

#### ② Rotary encoder

Rotate this encoder to activate its programmable function. (System or Group Up/ Down in Trunking Format, and Group or Channel Up/ Down in Conventional Format.) For further details, contact your dealer.

#### ③ POWER switch/ VOLUME control

Turn clockwise to switch ON the transceiver. Rotate to adjust the volume. Turn counterclockwise fully to switch OFF the transceiver.

#### ④ Transmit/ Battery low indicator

This red LED lights during transmission. If programmed by your dealer, when the battery pack power is low, the LED flashes during transmission. Replace or recharge the battery pack.

#### ⑤ Auxiliary (orange) key

Press to activate its auxiliary function {page 13}.

#### ⑥ Battery pack safety catch

Flip this catch to prevent accidentally pressing the battery pack release latch.

#### ⑦ Battery pack release latch

Press this latch to release the battery pack.

#### ⑧ PTT (Push-To-Talk) switch

Press this switch, then speak into the microphone to call a station.

#### ⑨ Side 1, Side 2 keys

Press to activate their auxiliary functions.

#### ⑩ S, A, ▲ B, and C► keys

Press to activate their auxiliary functions.

#### ⑪ Universal connector

Connect the (optional KMC-25) speaker/ microphone here. Otherwise, keep the supplied cover in place.

### 2-2. Programmable keys

Keys ②, ⑤, ⑧ and ⑨ can be programmed with the auxiliary functions listed in the following table. The keys can only be programmed with functions, depending on whether you are using Conventional Format or Trunking Format. Please contact your dealer for further details on these functions.

Function	Conventional Format	Trunking Format
Auto Telephone	No	Yes
Channel Down	Yes	No
Channel Up	Yes	No
Channel Up/Down <sup>1</sup>	Yes	No
Display Character	Yes	Yes
DTMF ID (BOT)	Yes	Yes
DTMF ID (EOT)	Yes	Yes
Emergency <sup>2</sup>	Yes	Yes
Group Down	Yes	Yes
Group Up	Yes	Yes
Group Up/Down <sup>1</sup>	Yes	Yes
Home Channel	Yes	No
Home Group	No	Yes
Key Lock	Yes	Yes
Lamp	Yes	Yes
Memory (RCL/STO)	Yes	Yes
Memory (RCL)	Yes	Yes
Memory (STO)	Yes	Yes
Message Mode <sup>3</sup>	Yes	Yes

## OPERATING FEATURES / REALIGNMENT

Function	Conventional Format	Trunking Format
Monitor Momentary	Yes	Yes
Monitor Toggle	Yes	Yes
None	Yes	Yes
Operator Selectable Tone	Yes	No
Redial	Yes	Yes
RF Power Low	Yes	Yes
Scan	Yes	Yes
Scan Del/Add	Yes	Yes
Scan Temporary Delete	No	Yes
SP Attenuation <sup>4</sup>	Yes	Yes
Squelch Level	Yes	No
Squelch Off Momentary	Yes	Yes
Squelch Off Toggle	Yes	Yes
System Down	No	Yes
System Up	No	Yes
System Up/Down <sup>1</sup>	No	Yes
Talk Around	Yes	No
Telephone Disconnect	No	Yes

- <sup>1</sup> These functions can be programmed only on key ②, the encoder.  
<sup>2</sup> This function can be programmed only on key ⑤, the Auxiliary (orange) key.  
<sup>3</sup> This function can be programmed only on key ⑨'s A key.  
<sup>4</sup> This function can be programmed only on the programmable function key of the optional KMC-25 speaker/ microphone.

## 2-3. Display

Indicator	Description
	Displays the channel or group number in conventional mode and the system or group number in trunking mode.
	Appears when performing Priority Scan.
	Appears when the key programmed as Monitor is pressed.
	This icon is not used on this transceiver.
	Appears when performing Scan.
	Appears when the key programmed as RF Power LO is pressed.
	Appears while using the telephone system.
	Appears when you have a message.
	Displays the group name or the system/ group number with up to 10 digits. The remaining 2 digits are used for various indicators.

## REALIGNMENT

## 1. Modes

Mode	Function
User mode	For normal use.
Panel test mode	Used by the dealer to check the fundamental characteristics.
Panel tuning mode	Used by the dealer to tune the radio.
PC mode	Used for communication between the radio and PC (IBM compatible).
Data programming mode	Used to read and write frequency data and other features to and from the radio.
PC test mode	Used to check the radio using the PC. This feature is included in the FPU. See panel tuning.
Firmware programming mode	Used when changing the main program of the flash memory.
Clone mode	Used to transfer programming data from one radio to another.
Self programming mode (Conventional Format)	Frequency, signalling and features write to the radio.
Firmware version information mode	Firmware version number is displayed on the LCD.

## 2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[A]+Power ON (Two seconds)
PC mode	Received commands from PC
Panel tuning mode	[Panel test mode]+[S]
Firmware programming mode	[S]+Power ON
Clone mode	[C]+Power ON (Two seconds)
Self programming mode (Conventional Format)	[LAMP]+Power ON (Two seconds)
Firmware version information mode	[side 1] + Power ON (Two seconds)

## 3. Panel Test Mode

Setting method refer to ADJUSTMENT.

## 4. Panel Tuning Mode

Setting method refer to ADJUSTMENT.

# REALIGNMENT

## 5. PC Mode

### 5-1. Preface

The TK-2140 transceiver is programmed by using a personal computer, programming interface (KPG-36) and programming software (KPG-74D).

The programming software can be used with an IBM PC or compatible. Figure 1 shows the setup of an IBM PC for programming.

### 5-2. Connection procedure

1. Connect the TK-2140 to the personal computer with the interface cable.
2. When the POWER switch on, user mode can be entered immediately. When PC sends command the radio enter PC mode, and "PROGRAM" is displayed on the LCD.  
When data transmitting from transceiver, the red LED is blinking.  
When data receiving to transceiver, the green LED is blinking.

#### Notes:

- The data stored in the personal computer must match model type, when it is written into the flash memory.
- Change the TK-2140 to PC mode, then attach the interface cable.

### 5-3. KPG-36 description

#### (PC programming interface cable: Option)

The KPG-36 is required to interface the TK-2140 to the computer. It has a circuit in its D-subconnector (25-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-36 connects the universal connector of the TK-2140 to the computers RS-232C serial port.

### 5-4. Programming software description

The KPG-74D programming disk is supplied in 3-1/2" disk format. The software on this disk allows a user to program TK-2140 radios via programming interface cable (KPG-36).

### 5-5. Programming with IBM PC

If data is transferred to the transceiver from an IBM PC with the KPG-74D, the destination data (basic radio information) for each set can be modified. Normally, it is not necessary to modify the destination data because their values are determined automatically when the frequency range (frequency type) is set.

The values should be modified only if necessary. Data can be programmed into the flash memory in RS-232C format via the universal connector.

Fig. 1

## 6. Firmware Programming Mode

### 6-1. Preface

Flash memory is mounted on the TK-2140. This allows the TK-2140 to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

### 6-2. Connection procedure

Connect the TK-2140 to the personal computer (IBM PC or compatible) with the interface cable (KPG-36). (Connection is the same as in the PC Mode.)

### 6-3. Programming

1. Start up the programming software (Fpro.exe).
2. Set the communications speed (normally, 57600 bps) and communications port in the configuration item.
3. Set the firmware to be updated by file name item.
4. Turn the TK-2140 power ON with the [S] switch held down. When "PROG 57600" appears, release your finger from the switch.
5. Check the connection between the TK-2140 and the personal computer, and make sure that the TK-2140 is in the Program mode.
6. Press write button in the window. A window opens on the display to indicate progress of writing. When the TK-2140 starts to receive data, the [P] icon is blinking.
7. If writing ends successfully, the LED on the TK-2140 lights and the checksum is displayed.
8. If you want to continue programming other TK-2140 s, repeat steps 4 to 7.

#### Notes:

- This mode cannot be entered if the Firmware Programming mode is set to Disable in the Programming software (KPG-74D).
- When programming the firmware, it is recommend to copy the data from the floppy disk to your hard disk before update the radio firmware.

Directly copying from the floppy disk to the radio may not work because the access speed is too slow.

### 6-4. Function

1. If you press the [Side 2] switch while "PROG 57600" is displayed, the checksum is displayed. If you press the [Side 2] switch again while the checksum is displayed, "PROG 57600" is redisplayed.
2. If you press the [Side 1] switch while "PROG 57600" is displayed, the display changes to "PROG 19200" to indicate that the write speed is low speed (19200 bps). If you press the [Side 1] switch again while "PROG 19200" is displayed, the display changes to "PROG 38400", and the write speed becomes the middle-speed mode (38400 bps). If you press the [Side 1] switch again while "PROG 38400" is displayed, the display returns to "PROG 57600".

#### Note:

Normally, write in the high-speed mode.

## CIRCUIT DESCRIPTION

## 1. Overview

This transceiver is VHF/FM portable transceiver designed to operate in the frequency range of 136 to 174MHz (K) and a VHF/FM band EFJ LTR™ trunked system compatible FM portable transceiver that can be programmed to operate on both LTR and conventional systems.

## 2. Circuit Configuration by Frequency

The receiver is a double-conversion superheterodyne with a first intermediate frequency (IF) of 44.85MHz and a second IF of 455kHz. Incoming signals from the antenna are mixed with the local signal from the PLL to produce the first IF of 44.85MHz.

This is then mixed with the 44.395MHz second local oscillator output to produce the 455kHz second IF. This is detected to give the demodulated signal.

The transmit signal frequency is generated by the PLL VCO, and modulated by the signal from the microphone. It is then amplified and sent to the antenna.

Fig. 1 Frequency configuration

## 3. Receiver System

## 3-1. RF unit

An incoming RF signal from the antenna terminal is passed through the antenna switch (D102,103,104 and D105 are off) and then the bandpass filter (L215,217). The bandpass filter is

Fig. 2 Receiver section

adjusted by a variable capacitor. The input voltage to the variable capacitor is regulated by the voltage output from the D/A converter (IC307). The signal is amplified by RF amplifier (Q207), and passed through the bandpass filter (L210,213). The resulting signal is applied to the first mixer (Q206), where it is mixed with the first local oscillator signal output from the frequency synthesizer to produce the first IF (44.85MHz).

## 3-2. IF unit

The first IF signal is passed through a four-pole monolithic crystal filter (XF202) to remove a adjacent channel signal. The filtered first IF signal is amplified by the first IF amplifier (Q205) and then applied to the IF system IC (IC200). The IF system IC provides a second mixer, second local oscillator, limiting amplifier, quadrature detector and RSSI (Received Signal Strength Indicator). The second mixer mixes the first IF signal with the 44.395MHz of second local oscillator output (crystal unit X200) and produces the second IF signal of 455kHz.

The second IF signal is passed through the ceramic filter (CF200; Wide, CF201 ; Narrow) to more remove the adjacent channel signal. The filtered second IF signal is amplified by the limiting amplifier and demodulated by the quadrature detector with ceramic discriminator (CD200). The demodulated

Center Frequency		Nominal 455kHz

Insertion Loss	at 455 kHz	Max. 6.0dB

**Table 2 Ceramic filter (L72-0996-05): CF201**

signal is routed to the audio circuit.

### 3-3. Wide/Narrow changeover circuit

Narrow and Wide settings can be made for each channel by switching the ceramic filters CF200 (Wide), CF201 (Narrow).

The WIDE (high level) and NARROW (low level) data is output from IC311.

Regardless of NARROW or WIDE band selection, signals always pass through the filter, CF200.

When the WIDE band is selected, Q201 is turned ON, then D202 and D203 are turned OFF.

So, the signal does not pass through the filter CF201. When the NARROW band is selected, Q201 is turned OFF, then D202 and D203 are turned ON. So, the signal passes through the filters, CF200 and CF201.

Q503 turns on/off with the Wide/Narrow data and the IC200 detector output level is changed to maintain a constant output level during wide or narrow signals.

**Fig. 3 Wide/Narrow changeover circuit**

### 3-4. Audio amplifier circuit

The demodulated signal from IC200 goes through the mute switch (Q204) and is amplified by IC300 (2/2), high-pass filtered, low-pass filtered, high-pass filtered, band-eliminate filtered, and de-emphasized by IC500.

The signal then goes through an AF amplifier IC305 (2/2), an electronic volume control (IC307), and an AF switch (Q308 is on), and is routed to audio power amplifier (IC313), where it is amplified and output to the internal speaker.

The audio mute signal (AM1) from the shift register becomes Low in the standby and Q302, Q303 which are power supply circuit for IC313 turn off. Also, IC500 is set to the power down mode according to data from microprocessor, and the AF signal is muted. When the audio is output, AM1 becomes High to turn Q302, Q303 ON, and voltage is supplied to power terminal VP of IC313. Also, IC500 is canceled out of the power down mode.

The speaker is switched by the logic of speaker switching terminal SSW on the universal connector. When SP-MIC is not attached, the logic of SSW becomes High and SW (Q308) is turned ON, and the AF signal is input to both amplifiers of IC313.

When SP-MIC is attached, SSW is connected to GND at inside of SP-MIC. For this reason, Q308 is turned OFF, and the AF signal is input only to amplifier for EXT SP of IC313.

Change of INT/EXT SP refer to Fig. 4.

AM1	SSW	VC1	VC2	SP
H	H	H	L	INT
H	L	L	H	EXT
L	H	L	L	MUTE
L	L	L	L	MUTE

**Fig. 4 Audio amplifier circuit**

## CIRCUIT DESCRIPTION

### 3-5. Squelch circuit

The output from IC200 enters FM IC again, then passed through a band-pass filter. And passed through a band-pass filter IC202 (2/2). The noise component output from IC202 (2/2) is amplified by Q208 and rectified by D201 to produce a DC voltage corresponding to the noise level. The DC voltage is sent to the analog port of the CPU (IC309). And IC200 outputs a DC voltage (RSSI) corresponding to the input of the IF amplifier. The CPU reads the RSSI signal via pin 93.

IC309 determines whether to output sounds from the speaker by comparing the input voltage of pin 91 and pin 93 with the preset value.

Fig. 5 Squelch circuit

Fig. 6 Squelch and RSSI voltage vs ANT input level

## 4. Transmitter System

### 4-1. Microphone amplifier

The signal from the internal microphone goes through the mute switch (Q301).

When the SP-MIC is not attached, the microphone switching terminal (MSW) on the universal connector becomes High, and mute switch (Q301) is turned ON. When the SP-MIC is attached, MSW is connected to GND at inside of SP-MIC. For this reason, Q301 is turned OFF, the internal microphone is muted, and only the input of the external microphone is supplied to the microphone amplifier.

The signal from microphone passes through the limitter circuit in D501 and amplified by IC501 (1/2), and Mic mute switch (Q502 is off in TX) and through the high-pass filter, the ALC circuit, the low-pass filter, the high-pass filter, and pre-emphasis/IDC circuit in IC500 on the small board. When encoding DTMF, mute switch (Q501) is turned OFF for muting the microphone input signal.

The signal passes through the D/A converter (IC307) for the maximum deviation adjustment, and enters the summing amplifier consisting of IC305 (1/2), and is mixed with the low speed data from the CPU (IC309).

The output signal from the summing amplifier passes through the D/A converter (IC307) again and goes to the VCO modulation input.

The other output signal from the summing amplifier passes through the D/A converter (IC307) again for the BAL adjustment, and the buffer amplifier (IC302 : 2/2), and goes to the VCXO modulation input.

Fig. 7 Microphone amplifier

### 4-2. Drive and Final amplifier

The signal from the T/R switch (D101 is on) is amplified by drive amplifier (Q100 and Q101) to +15~17dBm.

The output of the drive amplifier is amplified by the RF power amplifier (Q106) to 5.0W (1W when the power is low). The RF power amplifier is MOS FET transistor. The output of the RF power amplifier is then passed through the harmonic filter (LPF) and antenna switch (D102,103 are on) and applied to the antenna terminal.

Fig. 8 Drive and final amplifier and APC circuit

### 4-3. APC circuit

The APC circuit always monitors the current flowing through the drive amplifier (Q103) and the RF power amplifier (Q106) and keeps a constant current. The voltage drop at R119, R120 and R125 is caused by the current flowing through the RF power amplifier and this voltage is applied to the differential amplifier (IC100 1/2).

IC100(2/2) compares the output voltage of IC100(1/2) with the reference voltage from IC307, and the output of IC100(2/2) controls the VGG of the RF power amplifier to make the both voltages to same voltage.

The change of power high/low is carried out by the change of the reference voltage. Q105,107 and 108 are turned on in transmit and the APC circuit is active.

# CIRCUIT DESCRIPTION

## 5. Frequency Synthesizer Unit

### 5-1. Frequency synthesizer

The frequency synthesizer consists of the VCXO (X1), VCO, PLL IC(IC1) and buffer amplifiers.

The VCXO generates 16.8MHz. The frequency stability is 2.5ppm within the temperature range of -30 to +60°C. The frequency tuning and modulation of the VCXO are done to apply a voltage to pin 1 of the VCXO. The output of the VCXO is applied to pin 8 of the PLL IC.

The TK-2140's VCO consists of 2VCO and covers a dual range of the 180.85~218.85MHz and the 136~174MHz. The VCO generates 180.85~218.85MHz for providing to the first local signal in receive. The operating frequency is generated by Q3 in transmit mode and Q2 in receive mode. The oscillator frequency is controlled by applying the VCO control voltage, obtained from the phase comparator (IC1) to the variable capacitor diodes (D1, D3, D7, and D8 in transmit mode and D2, D4, D9 and D10 in receive mode).

The T/R pin of IC312 goes "high" in receive mode causing Q4, Q6 and Q3 to turn off, and Q2 turn on. The T/R pin goes "low" in transmit mode.

The outputs from Q2 and Q3 are amplified by buffer amplifier (Q5) come to the amplifiers.

The PLL IC consists of a prescaler, fractional divider, reference divider, phase comparator, charge pump. This PLL IC is fractional-N type synthesizer and performs in the 40, 50 or 60kHz reference signal which is eighth of the channel step (5, 6.25 or 7.5kHz). The input signal from the pins 5 and 8 of the PLL IC is divided down to the 40, 50 or 60kHz and compared at phase comparator. The pulsed output signal of the phase comparator is applied to the charge pump and transformed into DC signal in the loop filter (LPF). The DC signal is applied to the pin 1 of the VCO and locked to keep the VCO frequency constant.

PLL data is output from DP (pin 73), CP (pin 74) and EP (pin 72) of the microprocessor (IC309). The data are input to the PLL IC when the channel is changed or when transmission is changed to reception and vice versa. A PLL lock condition is always monitored by the pin 30 (UL) of the microprocessor. When the PLL is unlocked, the UL goes low.

Fig. 9 PLL block diagram

## 6. Control Circuit

The control circuit consists of microprocessor (IC309) and its peripheral circuits. It controls the TX-RX unit and transfers data to and from the display unit. IC309 mainly performs the following;

- 1) Switching between transmission and reception by PTT signal input.
- 2) Reading system, group, frequency, and program data from the memory circuit.
- 3) Sending frequency program data to the PLL.
- 4) Controlling squelch on/off by the DC voltage from the squelch circuit.
- 5) Controlling the audio mute circuit by decode data input.
- 6) Transmitting tone and encode data.

### 6-1. Memory circuit

Memory circuit consists of the CPU (IC309) and a flash memory (IC308), a flash memory has a capacity of 2M bits that contains the transceiver control program for the CPU and data such as transceiver channels and operating features.

This program can be easily written from an external devices. Data. such as operating status, are programmed into the EEPROM (IC310).

#### • Flash Memory

**Note :** The flash memory holds data such as written with the FPU (KPG-74D), firmware program (User mode, Test mode, Tuning mode, etc.) This data must be rewritten when replacing the flash memory.

#### • EEPROM

**Note :** The EEPROM stores tuning data (Deviation, Squelch, etc.).

Realign the transceiver after replacing the EEPROM.

Fig. 10 Memory circuit

### 6-2. Low battery warning

The battery voltage is monitored by the microprocessor (IC309). When the battery voltage falls below the voltage set by the Low Battery Warning adjustment, the red LED flashes to notify the operator that it is time to replace the battery. If the battery voltage falls even more (NiCd, NiMH: approx. 5.8V, Li-ion: approx. 6.1V), a beep sounds and transmission is stopped.

Low battery warning	Battery condition
The red LED flashes during transmission	The battery voltage is low but the transceiver is still usable.
The red LED flashes and continuous beep sounds while PTT pressed	The battery voltage is low and the transceiver is not usable to make calls.

## CIRCUIT DESCRIPTION

## 7. Signalling Circuit

## 7-1. Encode

## • Low-speed data (QT,DQT,LTR)

Low-speed data is output from pin 1 of the CPU. The signal passes through a low-pass CR filter, and goes to the summing amplifier (IC305 1/2). The signal is mixed with the audio signal and goes to the VCO and VCXO (X1) modulation input after passing through the D/A converter (IC307) for BAL adjustment.

## • High-speed data (DTMF)

High-speed data is output from pin 2 of the CPU. The signal passes through a low-pass filter consisting of IC304, and provides a TX DTMF tone and a RX DTMF tone. TX DTMF deviation making an adjustment by microprocessor is passed through the D/A convertor (IC307) and then applied to the audio processor (IC500).

The signal is mixed with the audio signal and goes to the VCO and VCXO. The RX DTMF tone is passed a summing amplifier (IC305 2/2). The D/A converter (IC307) for audio control, audio power amplifier and then to the speaker.

## • MSK (ESN)

ESN utilizes 1200bps MSK signal. MSK signal is output from pin 6 of IC500. The signal passes through the D/A converter (IC307) for the MSK deviation adjustment. and is routed to the VCO. When encoding MSK, the microphone input signal is muted.

Fig. 13 Encode

## 7-2. Decode

## • Low-speed data (QT,DQT,LTR)

The demodulated signal from the IF IC (IC200) is amplified by IC300 (2/2) and passes through a low-pass filter (IC306) to remove audio components. The signal is input to pin 95 of the CPU.

The CPU digitizes this signal, performs processing such as DC restoration, and decodes the signal.

## • High-speed data (DTMF)

The DTMF input signal from the IF IC (IC200) is amplified by IC300 (2/2) and goes to IC301, the DTMF decoder. The decoded information is then processed by the CPU. During transmission and standby, the DTMF IC is set to the power down mode when the PD terminal is High. When the line is busy, the PD terminal becomes Low, the power down mode is canceled and decoding is carried out.

## • High-speed data (2 tone)

The demodulated signal from the IF IC (IC200) is amplified by IC300 (2/2) and passes through an audio processor (IC500) and band-pass filter IC303 (1/2) and IC 201 (1/2) to remove a low-speed data. The CPU digitizes this signal, performs processing such as DC restoration, and decodes the signal.

## • MSK (ESN)

The MSK input signal from the IF IC is amplified by IC300 (1/2) and goes to pin 5 of IC500. The signal is demodulated by MSK demodulator in IC500. The demodulated data goes to the CPU for processing.

Fig. 14 Decode

# CIRCUIT DESCRIPTION

## 8. Power Supply Circuit

Battery +B is supplied via a 3A fuse from the battery terminal connected to the TX-RX unit. After passing through the power switch, power supply (SB) is applied to the three AVR's. IC401 supplies 5V (5M) to the control circuit, and IC403 supplies 5V (5C) to common circuits. IC402 supplies to the TX circuit, the RX circuit and common circuits of needless save mode. During transmission, 5TC becomes Low and Q405 is turned ON to supply 5V (5T) to the TX circuit. During reception, 5RC becomes Low and Q404 is turned ON to supply 5V (5R) to the RX Circuit.

The power supply voltage monitor IC (IC404) monitors power supply voltage (SB). If the voltage falls (less than 5V), the VOUT port goes “LOW” level, the CPU INT port also goes “LOW” level, and the CPU stops.

**Fig. 15 Power supply circuit**

## SEMICONDUCTOR DATA

Microprocessor : 30620M8A-XXXGP (TX-RX UNIT : IC309)

## ■ Pin function

Pin No.	Port Name	I/O	Function
1	LSDO	O	Low speed data output. (QT/DQT/LTR)
2	HSDO	O	High speed data output. (DTMF)
3	HSDI	I	High speed data input. (2Tone)
4	DSTB	O	D/A converter data strobe output.
5	5RC	O	RX power control. H: TX L: RX
6	BYTE	-	+5V.
7	CNV <sub>ss</sub>	-	GND.
8	AFDAT	O	MODEM MSK encode data output.
9	AFRDT	I	MODEM MSK decode data input.
10	RESET	-	CPU reset.
11	XOUT	-	CPU clock.
12	VSS	-	GND.
13	XIN	-	CPU clock.
14	V <sub>cc</sub>	-	+5V
15	-	-	NC
16	DTSTD	I	DTMF decoder data detect input.
17	AFTRD	I	MODEM MSK encode data output timing Pulse input.
18	AFRTM	I	MODEM MSK decode data Input timing pulse input.
19	EEPDAT	I/O	EEPROM data input/output.
20	BEEP	O	Beep output.
21	SKEY	I	[S] Key input.
22	AKEY	I	[A] Key input.
23	BKEY	I	[B] Key input.
24	CKEY	I	[C] Key input.
25	AUX	I	[AUX] Key input.
26	PTT	I	[PTT] Key input.
27	MONI	I	[MON] Key input.
28	LAMP	I	[LAMP] Key input.
29	AUXTXD	O	External serial interface (COM1) TDX1.
30	AUXRXD	I	External serial interface (COM1) RXD1.
31	DTMDAT	I	DTMF decoder data input.
32	DTCLK	O	DTMF decoder clock output.
33	TXD	O	Serial interface (COM0) TXD0 (to MIC connector).
34	RXD	I	Serial interface (COM0) RXD0 (to MIC connector).
35	DAT	O	Common data output.
36	CLK	O	Common clock output.
37	RDY	-	Can not used.
38	ALE	-	Can not used.
39	HOLD	-	Can not used.
40	HLDA	-	Can not used.
41	BLCK	-	Can not used.
42	RD	O	Flash memory RD bus.
43	BHE	-	Can not used.
44	WR	O	Flash memory WR bus.
45	SAVE	O	Battery save output.
46	SELF	I	Self programming mode enable input.
47	CS/MODE	O	LCD driver chip select output.
48	CS0	O	Flash memory chip enable.
49	A19	-	Can not used.
50~59	A18~A9	O	Flash memory address bus.

Pin No.	Port Name	I/O	Function
60	V <sub>cc</sub>	-	+5V
61	A8	O	Flash memory address bus.
62	VSS	-	GND.
63~70	A7~A0	O	Flash memory address bus.
71	UL	I	PLL unlock detect input.
72	EP	O	PLL IC Data Strobe output.
73	DP	O	PLL IC Data output.
74	CP	O	PLL IC Clock output.
75~78	EN4~1	I	Rotary SW input 4~1.
79~86	D7~D0	I	Flash memory data bus.
87	PF	I	SP-Mic PF switch input.
88	VOL	I	Volume level input.
89	BATT2	I	Battery distinction input.
90	BATT1	I	Battery voltage
91	ASQL	I	Squelch level input.
92	TEMP	I	Thermistor input.
93	RSSI	I	Received signal strength indicator input (RSSI).
94	AVSS	-	GND.
95	LSDI	I	Low speed data input (QT/DQT/LTR).
96	VREF	-	+5V
97	AVCC	-	+5V
98	SFTSTB1	O	Shift register data strobe output.
99	OE	O	Shift register output enable output.
100	AFSTB	O	MODEM data strobe output.

# DESCRIPTION OF COMPONENTS

## TX-RX UNIT (X57-6400-10)

Ref. No.	Use/Function	Operation/Condition
IC1	MOS IC	PLL IC
IC100	MOS IC	APC AMP
IC200	MOS IC	IF IC
IC201	MOS IC	AF AMP, Filter
IC300	MOS IC	AF AMP, Filter
IC301	MOS IC	DTMF Decoder
IC302	MOS IC	AF AMP, Filter
IC303	MOS IC	AF AMP, Filter
IC304	MOS IC	AF AMP, Filter
IC305	MOS IC	AF AMP, Filter
IC306	MOS IC	AF AMP, Filter
IC307	MOS IC	Potential Meter
IC308	ROM IC	Flash ROM
IC309	MPU	MPU
IC310	ROM IC	EEPROM
IC311,312	MOS IC	Shift Register
IC313	BI-POLAR IC	AF Power AMP
IC400	MOS IC	Detector
IC401	MOS IC	5M AVR
IC402	MOS IC	5CNS AVR
IC403	MOS IC	5C AVR
IC404	MOS IC	Detector
IC500	MOS IC	Base Band IC
IC501	MOS IC	AF AMP, Filter
Q1	TRANSISTOR	f in RF AMP
Q2	FET	RX VCO oscilstion
Q3	FET	TX VCO oscilstion
Q4	FET	VCO Switch
Q5	TRANSISTOR	Buffer AMP
Q6	TRANSISTOR	VCO Switch
Q7	TRANSISTOR	Ripple filter
Q8	TRANSISTOR	TX/RX common RF AMP
Q100	TRANSISTOR	Pre-drive AMP
Q101	TRANSISTOR	Pre-drive AMP
Q103	FET	TX Drive AMP
Q104,105	TRANSISTOR	APC Switch
Q106	FET	TX Final AMP
Q107	FET	APC Switch
Q108	TRANSISTOR	APC Switch
Q201	TRANSISTOR	W/N Switch
Q203	FET	AF detect Switch
Q204	FET	DM Switch
Q205	TRANSISTOR	IF AMP
Q206	FET	Front-end 1st mixer
Q207	FET	Front-end RF AMP
Q208	TRANSISTOR	Noise AMP
Q300	TRANSISTOR	Beet shift Switch
Q301	FET	Mic mute
Q302	TRANSISTOR	AF AMP AVR switch
Q303	TRANSISTOR	AF AMP AVR
Q304	TRANSISTOR	LCD AVR
Q305	FET	Int/Ext Switch
Q306	TRANSISTOR	TX LED switch

Ref. No.	Use/Function	Operation/Condition
Q307	FET	Int/Ext Switch
Q308	FET	Int/Ext Switch
Q309	TRANSISTOR	BUSY LED switch
Q310	TRANSISTOR	LCD LED AVR switch
Q311	TRANSISTOR	LCD LED AVR
Q400	FET	5MS Switch
Q401	FET	5MS Switch
Q403	TRANSISTOR	5R Switch
Q404	FET	5R Switch
Q405	TRANSISTOR	5T Switch
Q406	FET	SAVE Switch
Q500	TRANSISTOR	RX AF mute
Q501	FET	TX AF mute
Q502	FET	Mic mute
Q503	TRANSISTOR	W/N Switch
D1	Variable capacitance diode	TX VCO
D2	Variable capacitance diode	RX VCO
D3	Variable capacitance diode	TX VCO
D4	Variable capacitance diode	RX VCO
D5	Variable capacitance diode	TX VCO modulation
D6	DIDOE	Ripple filter switch
D7,8	Variable capacitance diode	TX VCO
D9,10	Variable capacitance diode	RX VCO
D100,101	DIDOE	TX/RX RF switch
D102-105	DIDOE	ANT switch
D106	ZENER DIODE	APC protect
D200	DIDOE	SQL voltage charge
D201	DIDOE	SQL rectification
D202,203	DIDOE	W/N Switch
D205-208	Variable capacitance diode	BPF Tuning
D209	DIDOE	DM charge/discharge switch
D300	DIDOE	AF AMP bias
D301	DIDOE	AF AMP protect
D302	DIDOE	Surge absorption
D303,304	ZENER DIODE	Protect
D305	ZENER DIODE	AF AMP AVR
D306	DIDOE	Surge absorption
D307	ZENER DIODE	Protect
D308	ZENER DIODE	Mic input protect
D309	LED	TX red LED
D310	LED	RX green LED
D402	DIDOE	Surge absorption
D403	DIDOE	5MS protect switch
D405	DIDOE	5M protect
D501	DIDOE	Mis input protect

## PARTS LIST

\* New Parts.  $\Delta$  indicates safety critical components.Parts without **Parts No.** are not supplied.Les articles non mentionnés dans le **Parts No.** ne sont pas fournis.Teile ohne **Parts No.** werden nicht geliefert.

## Test Equipment Required for Alignment

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output	136 to 174MHz Frequency modulation and external modulation. -127dBm/0.1μV to greater than -47dBm/1mV
2. Power Meter	Input Impedance Operation Frequency Measurement Range	50Ω. 136 to 174MHz or more. Vicinity of 10W
3. Deviation Meter	Frequency Range	136 to 174MHz.
4. Digital Volt Meter (DVM)	Measuring Range Input Impedance	10mV to 10V DC High input impedance for minimum circuit loading.
5. Oscilloscope		DC through 30MHz.
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz. 0.2ppm or less.
7. Ammeter		5A.
8. AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz. 1mV to 10V.
9. Audio Generator (AG)	Frequency Range Output	50Hz to 5kHz or more. 0 to 1V.
10. Distortion Meter	Capability Input Level	3% or less at 1kHz. 50mV to 10Vrms.
11. 16Ω Dummy Load		Approx. 16Ω, 3W.
12. Regulated Power Supply		5V to 10V, approx. 5A Useful if ammeter equipped.

## ■ The following parts are required for adjustment

### 1. Antenna connector adapter

The antenna connector of this radio uses an SMA terminal.

Use an antenna connector adapter [SMA(f) – BNC(f) for adjustment. (The adapter is not provided as an option, so buy a commercially-available one.)

### Note

When the antenna connector adapter touches the knob, draw out the knob to mount the connector.

### 2. Universal connector

Use the interface cable (KPG-36) for PC tuning or the lead wire with plug (E30-3287-18) and screw (N08-0535-08) for panel tuning. Connect the plug to the universal connector of the radio and tighten the screw.

The lead wire with plug (E30-3287-18) and screw (N08-0535-08) terminals are as follows. Numbers are universal connector terminal numbers.

### Caution

1. When connecting the plug to the universal connector of the radio, a short circuit may occur. To prevent this, be sure to turn the radio POWER switch off.
2. Since the RX AF output is a BTL output, there is a DC component. Isolate this with a capacitor or transformer as shown in the figure.
3. Do not connect an instrument between red or black and GND.

- **Universal connector**

## ADJUSTMENT

- Panel tuning

- PC tuning

Connect the wires to the PCB in the connector case of interface cable.

For output the wires out of the connector case, need to process the connector case.

- Removing the front panel

After removing the battery pack, knobs, and antenna, remove the 2 screws from the back of the transceiver. Lift the chassis away from the bottom part gently, then pull out the chassis as shown below.

- Connecting the PTT, MIC, SP, and SW2 cables

When connecting the PTT, MIC, SP and SW2 2-wire cables, ensure that the color of each cable mates as shown in the following diagram.

# ADJUSTMENT

## ■ How to assemble the antenna connector and its terminal.

The antenna connector and its terminal are supplied as separate parts.

When replacing the antenna connector and/or terminal, assemble the parts prior to the replacement.

1. Mount the antenna connector onto the chassis ①.
  - Double-sided adhesive tape is attached to the terminal; peel off the tape cover ②.
  - Attach the terminal to the antenna connector as shown below.
  - Slide the antenna terminal along the adhesive cushion on the chassis so that the adhesive part on the terminal is firmly attached to the antenna connector ③.
  
  2. Remove the antenna connector from the chassis with its terminal attached, then solder the center part of antenna connector to its terminal ④.
- Do not use excessive solder on terminal.

## Repair Jig (Chassis)

Use jig (part No.: A10-4060-04) for repairing the TK-2140. Place to TX-RX unit on the jig and fit it with screws.

The jig facilitates the voltage check and protects the final amplifier FET when the voltage on the flow side of the TX-RX unit is checked during repairs.

## How to Remove the Cable

1. Gently draw out both sides of the connector lever uniformly in the direction of the arrow with tweezers.  
(CN303, CN304, CN305, CN306)

2. Gently rise up the connector lever in the direction of the arrow with a fine regular screwdriver or tweezers.  
(CN301, CN302, CN400)

## ADJUSTMENT

**Test Mode****■ Test mode operating features**

This transceiver has a test mode. **To enter test mode, press [A] key and turn power on. Hold [A] key until test channel No. and test signalling No. appears on LCD.** Test mode can be inhibited by programming. To exit test mode, switch the power on again. The following functions are available in test mode.

**• Controls**

Controls	"FCN" appears	"FCN" not appears
[PTT]	Used when making a transmission.	Used when making a transmission.
[AUX]	Unused	Unused
[Side1]	Monitor ON and OFF.	Monitor ON and OFF.
[Side2]	Lights the lamp for five seconds. Lighting is extended for a further five seconds by pressing any key while the lamp is lit.	Changes wide and narrow.
[S]	Sets to the Tuning mode.	Sets to the Tuning mode.
[A]	Function OFF	Function ON.
[B]	Compander function ON and OFF.	RF power HIGH and LOW.
[C]	Best shift ON and OFF.	Changes signalling.
[ENCODER]	Changes channel.	Changes channel.

**Note:** If a [S],[A],[B],[C] key is pressed during transmission, the DTMF corresponding to the key that was pressed is sent.

**• LCD indicator**

"SCN"	Unused
"  "	Lights at Compander ON.
"LO"	Lights at RF Power Low.
"P"	Unused
"MON"	Lights at moniter ON.
"SVC"	Unused
"  "	Unused

**• LED indicator**

Red LED	Lights during transmission. Blinks at the low battery voltage warning.
Green LED	Lights when there is a carrier.

**• Sub LCD indicator**

"FCN"	appears at Function ON.
"n"	appears at Narrow ON.

**■ Frequency and signalling**

The set has been adjusted for the frequencies shown in the following table. When required, re-adjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

**Frequency (MHz)**

Channel No.	K	
	RX	TX
1	155. 05000	155. 10000
2	136. 05000	136. 10000
3	173. 95000	173. 90000
4	155. 00000	155. 00000
5	155. 20000	155. 20000
6	155. 40000	155. 40000
7~16	—	—

**Signalling**

Signalling No.	RX	TX
1	None	None
2	None	100Hz square
3	LTR data	LTR data
4	QT 67.0Hz	QT 67.0Hz
5	QT 151.4Hz	QT 151.4Hz
6	QT 210.7Hz	QT 210.7Hz
7	QT 250.3Hz	QT 250.3Hz
8	DQT D023N	DQT D023N
9	DQT D754I	DQT D754I
10	DTMF DEC, (159D)	DTMF ENC, (159D)
11	None	DTMF tone 9
12	2 tone 321.7/928.1Hz	None
13	Single tone 1200Hz	Single tone 1200Hz
14	None	MSK
15	MSK code	MSK code

**• Preparations for tuning the transceiver**

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

When ever the transmitter is turned, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with a  $16\Omega$  dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

**• Transceiver tuning****(To place transceiver in tuning mode)**

Channel appears on LCD. Set channel according to tuning requirements.

## ADJUSTMENT

## LCD display (Test mode)

channel No. Signalling No.

## LCD display (Tuning mode)

FREQ □□□ 1

Adjustment item      Adjustment value (1~256)

Press [S], now in tuning mode. Use [**◀ B**] button to write tuning data through tuning modes, and channel selector knob to adjust tuning requirements (1 to 256 appears on LCD).

Use [**C ▶**] button to select the adjustment item through tuning modes. Use [**A**] button to adjust 3 or 5 point tuning, and use [**LAMP**] button to switch between Wide/Narrow.

## Panel Tuning Mode frequency table

TEST Ch	K	
	RX frequency (MHz)	TX frequency (MHz)
L	136.05000	136.10000
L2	146.05000	146.10000
C	155.05000	155.10000
H2	164.05000	164.10000
H	173.95000	173.90000

 M2: 162-174MHz  
 M3: 136-150MHz

# TK-2140

## SPECIFICATION

### General

Frequency Range

RX, TX ..... K : 136 to 174MHz

Systems ..... Trunked Mode : Maximum 32

Groups ..... Maximum 250

Channels ..... Trunked Mode : Maximum 600

Conventional Mode : Maximum 250

Channel Spacing (Wide/Narrow) ..... 25kHz, 30kHz/12.5kHz, 15kHz

PLL Channel Stepping ..... 2.5, 5.0, 6.25, 7.5kHz

Operating Voltage ..... DC 7.5V ±20%

Battery Life ..... About 9 hours at 5-5-90 duty cycle with KNB-24L battery

About 8 hours at 5-5-90 duty cycle with KNB-25A battery

About 12 hours at 5-5-90 duty cycle with KNB-26N battery

Temprature Range ..... -30°C to +60°C (-22°F to +140°F)

Dimension and Weight

With KNB-24L (1400mAh battery) ..... 4.13" (105mm) H x 2.21" (56mm) W x 1.16" (29.5mm) D x 0.66lbs (300g)

### Receiver (Measurements made per TIA/EIA-603)

RF Input Impedance ..... 50Ω

Sensitivity

12dB SINAD (Wide/Narrow) ..... 0.25µV/0.28µV

Selectivity (Wide/Narrow) ..... 70dB/65dB

Intermodulation (Wide/Narrow) ..... 70dB/65dB

Spurious ..... 70dB

Frequency Stability ..... ±0.00025% (-30°C to +60°C)

Channel Spread ..... 38MHz : K

Audio Power Output ..... 500mW at 16Ω less than 5% distortion

### Transmitter (Measurements made per TIA/EIA-603)

RF Power Output

Hi ..... 5W

Low ..... 1W

RF Output Impedance ..... 50Ω

Spurious ..... 70dB

Modulation (Wide/Narrow) ..... 16K0F3E/11K0F3E

FM Noise (Wide/Narrow) ..... 45dB/40dB

Audio Distortion ..... Less than 3%

Frequency Stability ..... ±0.00025% (-30°C to +60°C)

Channel Spread ..... 38MHz : K

## KENWOOD CORPORATION

14-6, Dogenzaka 1-chome, Shibuya-ku, Tokyo 150-8501, Japan

KENWOOD SERVICE CORPORATION

P.O. BOX 22745, 2201 East Dominguez Street, Long Beach, CA 90801-5745,
