

Affordability for game food plots.

The Plot Ranger is an ideal tool for planting food plots by the avid hunter or the ultimate animal lover. Sized right to work behind a sub-compact to compact tractor, your ATV or Utility Vehicle, or even your pick-up truck, this versatile implement has just what you need to be a successful food supplier or to provide an ideal habitat to the wild outdoors.

FPS SERIES

Pull-type — 48"

plot RANGER

- Convenient multi-functional hitch
- Roller/packer raises above spreader for transport
- Electrically controlled spin spreader
- Seed deflector controls spreading width
- 16" Notched discs
- Electric transport lift available

HITCH

The easily changed dual hitch incorporates a ball hitch on one side, and a tang hitch on the other. The Plot Ranger can easily be traded amongst neighbors or rental yards, without the worry of needing to change hitches.

DISC GANG

The 16" notched discs, set up in an offset pattern, aggressively rip through the soil and vegetation, opening the ground for aeration and nutrients, and supplying fresh dirt to accept seed. The aggressiveness of the disc gangs is easily changed to match your desired result.

SEED HOPPER

The durable plastic seed hopper has a tight fitting lid to keep it in place, and the elements out. The electric spinner is powered from the vehicle electrical system, and easily calibrated and operated from a control panel that is positioned with the operator. The metal deflector ring controls the seeding width to within the width of the disc gang, vs. a wider pattern like some competitive units. Why sling seed beyond your working width?

Seeder is available for quick mounting to your Utility Vehicle.

ROLLER PACKER

The simple design of the roller packer eliminates many parts, yet is efficient and effective in helping seed and soil make contact. The weight of the roller gently packs the dirt and helps eliminate air pockets, setting the seed on its way to successful germination! The roller packer easily folds forward and over the seed hopper, resting on the disc main frame for transport.

Easily control various seeding rates from your seat.

The exclusive deflector ring controls the seeding pattern to within the width of the disced area.

TRANSPORT

Pneumatic transport tires are raised and lowered either electrically or manually. The electric method uses an electric actuator that is quick and operated from the same control panel as the seed hopper. If you are planting strips, it is quick and easy to raise the Plot Ranger to move over 20 yards and set it down again and take off!
