

## **BLACK BURST, TONE & VIDEO/AUDIO DA MODEL PAV-880**

MADE IN THE USA

### **FEATURES**

- ◆ **6 Black Burst Outputs**
- ◆ **Tone Generator**
- ◆ **1 X 8 or two 1 X 4 Video**
- ◆ **1 X 8 Mono or 1 X 4 Stereo**

The PAV-880 provides the user with six precision black burst outputs for system distribution. Its stable internal timebase provides flawless output signals for black burst reference, factory adjusted to RS-170A standards. Black burst is provided on rear panel BNC connectors. In addition, a high quality 1 KHz tone generator is provided for audio system testing. A rear panel terminal block allows for easy connection to the system. The balanced, low impedance output conforms to Audio Engineering Society (AES) standards for audio distribution.

The video DA section has high impedance loop through in the 1X8 mode of operation. In the dual 1X4 mode, the input is terminated internally. The dual mode of operation provides four outputs of each of the two inputs. A switch on the rear panel allows the unit to operate as a dual 1X4 DA with two terminated inputs with four outputs each amplifier section.

Two gain controls on the front panel adjust the video level to  $\pm 3\text{dB}$  for each set of four outputs. The video bandwidth is 20 MHz, making it a very useful device for any application. A fuse on the front panel provides easy replacement.

The audio DA section has high impedance loop through. All connections for the inputs and outputs use positive captive screw clamp terminals blocks located on the rear panel. A switch on the front panel allows the unit to operate as a mono or stereo DA with one input and eight outputs mono or 2 X 4 stereo. Selecting the dual 1 X 4 mode is required for stereo operation with four outputs for each of the Left and Right channels. A Master Gain Control on the front panel adjust the audio gain to  $\pm 16\text{dB}$ . A gain trim control for each channel allows for independent level adjustment. A balanced match of each channel is easily obtained.
