PRECAUTIONS WHEN USING CADMIUM-FREE CONTACT TYPE

Models with cadmium-free contacts have been introduced in order to reduce environmentally harmful substances. ("F" is affixed to the end of the part number.) We ask customers who are currently using products with cadmium-containing contacts (no "F" at the end of the part number) to please make the switch to models with cadmium-free contacts. When switching, operating life may differ depending on the load. Please be sure to verify this by conducting an evaluation using actual equipment.

NOTES

1. Switch mounting

Mount the switch with the recommended panel mounting hole dimensions shown in the dimensions.

Contact us if you are considering using a panel of other than the recommended size and shape.

2. Regarding fastening lead wires to terminals

1) When connecting the tab terminals, use a .250 Quick-connect and insert the terminals straight in.

If they are skewed, the terminals will require excessive insertion force. In addition, there is some variation in the insertion force required for different receptacles from different manufacturers, so confirm how much force is needed

REFERENCE

1. Outline of UL1054 test Overload test AJ9: 20A 250V AC (Power factor 0.75 to 0.8) 50 operation Endurance test AJ9: 16A 250V AC (Power factor 0.75 to 0.8) 6×10^3 operation After testing, temperature rise of terminals should be less than 30°C and no abnormality should be observed in characteristics. under actual conditions.

Do not solder wires onto tab terminals. 2) With manual soldering: Complete the soldering connection work within 3 seconds with the tip of the soldering iron (60W soldering iron) at a temperature of 420°C or lower, and take care not to apply any force to the terminal area. Avoid touching the switch with soldering iron.

3) The terminals should be connected in such a way that they are not under constant stress from the connecting wires.

4) Terminal material is copper alloy which may discolor due to finger's oil or after a long time. But that discoloration does not effect actual performance.

3. Resistance to chemicals

To clean the switch unit, use a neutral detergent diluted with water. Do not use acidic or alkaline solvents as

they may damage the switch. Furthermore, be careful not to get any of the detergent solution inside of the switch

while cleaning it. **4. Environment**

Avoid using and storing these switches in a location where they will be exposed to corrosive gases, silicon, or high dust levels, all of which can have an adverse effect on the contacts.

5. Take care not to drop the product as it may impair perfomance.

2. Outline of EN61058-1 test

After switching 5×10^3 times on the above load condition at both $85^{+5}_{0}^{\circ}$ C and $25\pm10^{\circ}$ C, temperature rise of terminals should be less than 55° C and no abnormality should be observed in characteristics.
