

USER GUIDE

NI USB-6221/6229/6251/6259 OEM

This document provides dimensions, pinouts, and information about the connectors, switch, LEDs, and chassis ground of the NI USB-6221/6229/6251/6259 OEM devices.

Caution There are no product safety, electromagnetic compatibility (EMC), or CE marking compliance claims made for the USB-6221/6229/6251/6259 OEM devices. Conformity to any and all compliance requirements rests with the end product supplier.

Figure 1 shows the USB-6221/6251 OEM and USB-6229/6259 OEM devices.

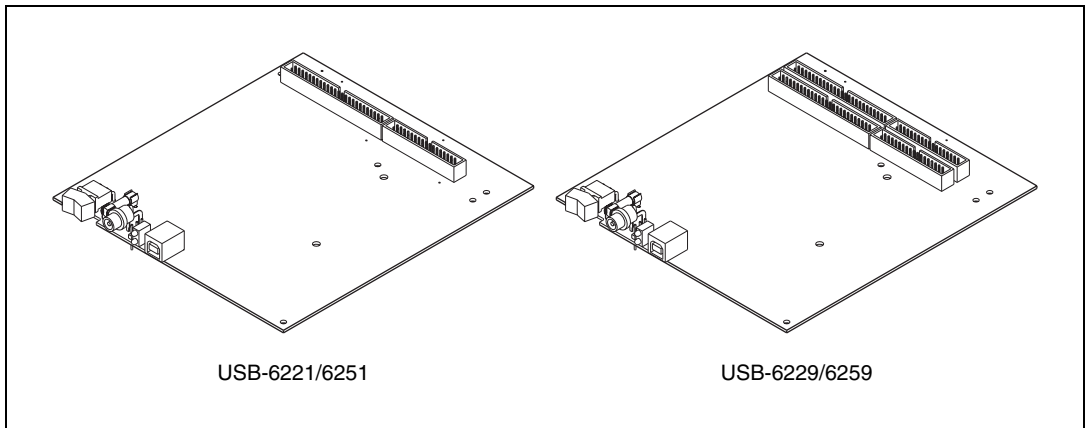

Figure 1. USB-6221/6251 and USB-6229/6259 OEM Devices

Refer to the *NI 622x Specifications* document for USB-6221/6229 specifications and the *NI 625x Specifications* document for USB-6251/6259 specifications. Refer to the *M Series User Manual* for more information about USB-6221/6229/6251/6259 devices. You can find all documentation at ni.com/manuals.

Dimensions

Figure 2 shows the dimensions of the USB-6221/6251 OEM device.

Figure 2. USB-6221/6251 OEM Dimensions in Inches (Millimeters)

Figure 3 shows the dimensions of the USB-6229/6259 OEM device.

Figure 3. USB-6229/6259 OEM Dimensions in Inches (Millimeters)

I/O Connector Pinouts

Figures 4 through 7 show the connector pinouts for the USB-6221 OEM, USB-6229 OEM, USB-6251 OEM, and USB-6259 OEM devices.

Refer to the *M Series User Manual* at ni.com/manuals for more information about USB-6221/6229/6251/6259 signals and how to connect them.

Figure 7. USB-6259 OEM Connector Pinout

LEDs

USB-6221/6229/6251/6259 OEM devices have two LEDs that reflect the device state. The green READY LED indicates whether the device is powered on and configured as a USB device. The yellow ACTIVE LED indicates whether there is USB bus activity.

Three connectors on the device allow you to connect an external LED circuit to the device. To connect an external READY LED, use E1 as the positive connection (+3.3 V) and E2 as the negative connection. To connect an external ACTIVE LED, use E1 as the positive connection and E3 as the negative connection. E1 is current limited with a 100 Ω resistor to the 3.3 V internal supply. This configuration limits the current to approximately 16 mA into a single external LED or approximately 8 mA each when both LEDs are on. You also can limit this current further by using external resistors as shown in Figure 8.

Figure 8. USB-6221/6229/6251/6259 OEM LEDs

Figure 9 shows how to connect an external READY or ACTIVE LED circuit to the device.

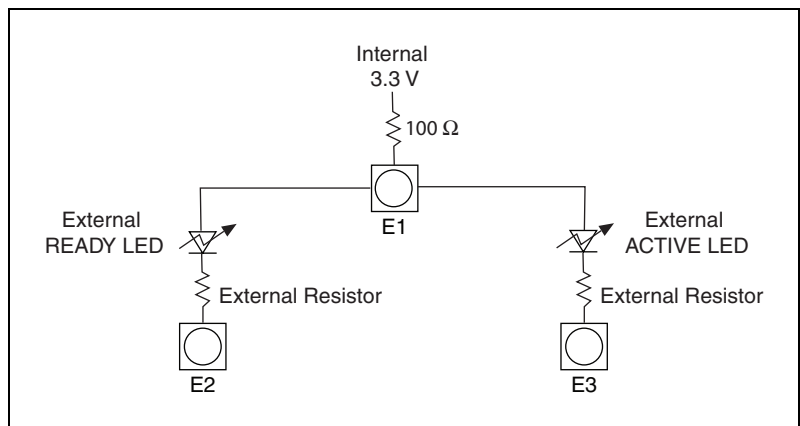

Figure 9. Schematics of the USB-6221/6229/6251/6259 OEM LEDs

Power Switch

The power switch on the USB-6221/6229/6251/6259 OEM device powers the device on and off. Figure 10 shows the pins on the power switch.

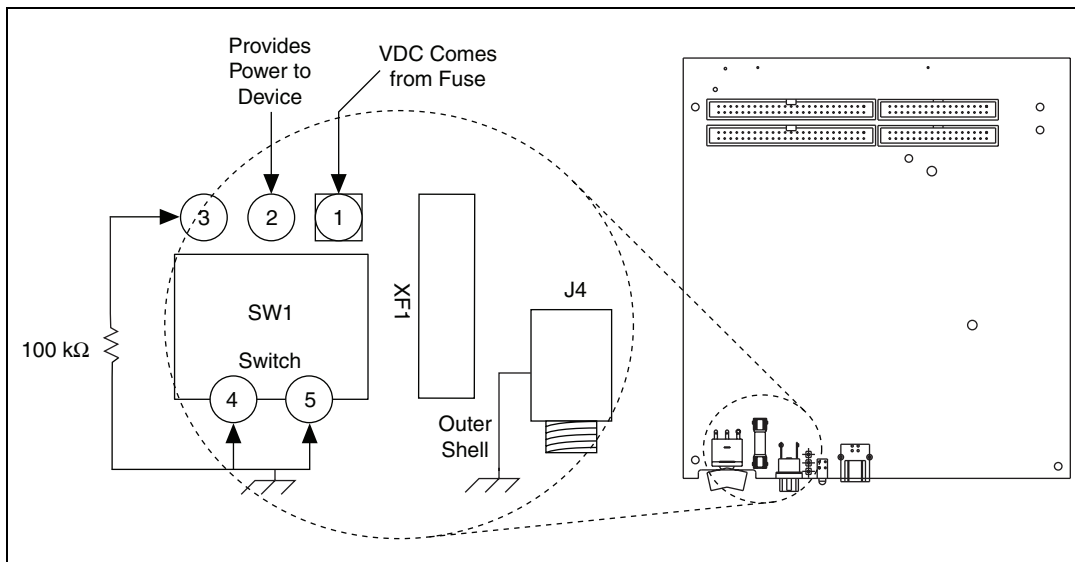

Figure 10. Power Switch (USB-6229/6259 OEM Shown)

Pin 1 is connected to VDC through the fuse (reference designator XF1). The VDC is the voltage provided by the power supply through the power connector (reference designator J4) and must be 11–30 V, 20 W.

Pin 2 provides power to the circuitry on the USB-6221/6229/6251/6259 OEM device. When the switch is in the On position, the VDC power supply from pin 1 is routed to pin 2.

Pin 3 connects pin 2 to ground through a 100 kΩ resistor when the switch is in the Off position. This allows the internal power supply in the USB-6221/6229/6251/6259 OEM device to safely discharge to ground when it is powered off. Figure 11 shows a schematic of the switch.

Figure 11. Schematic of the USB-6221/6229/6251/6259 OEM Switch

Chassis Ground

Chassis ground provides a connection between the enclosure and USB ground.

D GND is connected to the chassis ground through an internal connection to hole A, shown in Figure 12. The chassis ground directly connects to USB shield ground.

The USB-6221/6229/6251/6259 OEM device includes several mounting holes that are plated and designed for user-configured ground connections between the device chassis ground and the appropriate system ground. Figure 12 shows where the different grounds are connected.

Note The holes that are labeled B are reserved for an external shield. Do *not* use these holes as mounting holes.

Figure 12. Ground Connections (USB-6229/6259 OEM Shown)

Device Components

Table 1 contains information about the components used for interfacing and interacting with the USB-6221/6229/6251/6259 OEM device.

Table 1. USB-6221/6229/6251/6259 OEM Components

Component	Reference Designator(s) on PCB	Manufacturer	Manufacturer Part Number
LEDs	DS1	Dialight	553-0332
34-pin connectors	J1, J2*	3M	N2534-6002RB
50-pin connectors	P1, P2*	3M	N2550-6002UB
USB connector	J3	AMP	787780-1
Power connector	J4	Switchcraft	722RA
Power switch	SW1	ITT Industries, Cannon	E101J1A3QE2
F 2A L 250V fuse	XF1	Littelfuse	217.002
68-pin connectors [†]	J6*, J7	Honda	PCS-E68RLMD1+
* J2, P2, and J6 are available on USB-6229/6259 OEM devices only.			
[†] Optional mass termination connectors. These are not populated by default.
