It is the policy of OMEGA Engineering, Inc. to comply with all worldwide safety and EMC/EMI regulations that apply. OMEGA is constantly pursuing certification of its products to the European New Approach Directives. OMEGA will add the CE mark to every appropriate device upon certification.

The information contained in this document is believed to be correct, but OMEGA accepts no liability for any errors it contains, and reserves the right to alter specifications without notice.
WARNING: These products are not designed for use in, and should not be used for, human applications.

WARRANTY/DISCLAIMER

OMEGA ENGINEERING, INC. warrants this unit to be free of defects in materials and workmanship for a period of **13 months** from date of purchase. OMEGA's WARRANTY adds an additional one (1) month grace period to the normal **one (1) year product warranty** to cover handling and shipping time. This ensures that OMEGA's customers receive maximum coverage on each product.

If the unit malfunctions, it must be returned to the factory for evaluation. OMEGA's Customer Service Department will issue an Authorized Return (AR) number immediately upon phone or written request. Upon examination by OMEGA, if the unit is found to be defective, it will be repaired or replaced at no charge. OMEGA's WARRANTY does not apply to defects resulting from any action of the purchaser, including but not limited to mishandling, improper interfacing, operation outside of design limits, improper repair, or unauthorized modification. This WARRANTY is VOID if the unit shows evidence of having been tampered with or shows evidence of having been damaged as a result of excessive corrosion; or current, heat, moisture or vibration; improper specification; misapplication; misuse or other operating conditions outside of OMEGA's control. Components in which wear is not warranted, include but are not limited to contact points, fuses, and triacs.

OMEGA is pleased to offer suggestions on the use of its various products. However, OMEGA neither assumes responsibility for any omissions or errors nor assumes liability for any damages that result from the use of its products in accordance with information provided by OMEGA, either verbal or written. OMEGA warrants only that the parts manufactured by it will be as specified and free of defects. OMEGA MAKES NO OTHER WARRANTIES OR REPRESENTATIONS OF ANY KIND WHATSOEVER, EXPRESS OR IMPLIED, EXCEPT THAT OF TITLE, AND ALL IMPLIED WARRANTIES INCLUDING ANY WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED. LIMITATION OF LIABILITY: The remedies of purchaser set forth herein are exclusive, and the total liability of OMEGA with respect to this order, whether based on contract, warranty, negligence, indemnification, strict liability or otherwise, shall not exceed the purchase price of the component upon which liability is based. In no event shall OMEGA be liable for consequential, incidental or special damages.

CONDITIONS: Equipment sold by OMEGA is not intended to be used, nor shall it be used: (1) as a "Basic Component" under 10 CFR 21 (NRC), used in or with any nuclear installation or activity; or (2) in medical applications or used on humans. Should any Product(s) be used in or with any nuclear installation or activity, medical application, used on humans, or misused in any way, OMEGA assumes no responsibility as set forth in our basic WARRANTY/DISCLAIMER language, and, additionally, purchaser will indemnify OMEGA and hold OMEGA harmless from any liability or damage whatsoever arising out of the use of the Product(s) in such a manner.

RETURN REQUESTS/INQUIRIES

Direct all warranty and repair requests/inquiries to the OMEGA Customer Service Department. BEFORE RETURNING ANY PRODUCT(S) TO OMEGA, PURCHASER MUST OBTAIN AN AUTHORIZED RETURN (AR) NUMBER FROM OMEGA'S CUSTOMER SERVICE DEPARTMENT (IN ORDER TO AVOID PROCESSING DELAYS). The assigned AR number should then be marked on the outside of the return package and on any correspondence.

The purchaser is responsible for shipping charges, freight, insurance and proper packaging to prevent breakage in transit.

FOR **WARRANTY** RETURNS, please have the following information available BEFORE contacting OMEGA:

1. Purchase Order number under which the product was PURCHASED,
2. Model and serial number of the product under warranty, and
3. Repair instructions and/or specific problems relative to the product.

FOR **NON-WARRANTY** REPAIRS, consult OMEGA for current repair charges. Have the following information available BEFORE contacting OMEGA:

1. Purchase Order number to cover the COST of the repair,
2. Model and serial number of the product, and
3. Repair instructions and/or specific problems relative to the product.

OMEGA's policy is to make running changes, not model changes, whenever an improvement is possible. This affords our customers the latest in technology and engineering.

■ Preface: Request and notice

This instruction describes pen type RD200 series hybrid recorder (100 mm printing width) and pen type RD2800 series hybrid recorder (180 mm printing width).

In order to use your recorder correctly and safely and to prevent malfunctions, please read this instruction manual carefully.

Other instruction manuals to be provided separately

This instruction manual describes the operation under the standard specifications and also operations for the optional specifications of (1) alarm output/remote contacts and (2) printing format. For the communications interface unit and the optional specification of mathematical function/totalization, exclusive manuals are provided separately. Also for other optional specifications, of which description of operation is necessary, the relevant instruction manuals are provided respectively. Please read these together with this instruction manual if necessary.

Requests

1. To agents or distributors
   Make sure to pass this instruction manual to final customers.
2. To our valuable customers
   Keep this instruction manual until disposing of your recorder.

—————————————— Notices ——————————————

1. All or any part of this manual may not be duplicated or reproduced in any form, without first obtaining the permission of CHINO.
2. The details of this manual may be subject to change without notice.
3. The contents in this instruction manual have been carefully checked. However, if any question should still arise or if any error, omission or other deficiency be found, please inform your local CHINO sales agent of the details.
4. CHINO will not be responsible for any troubles resulting from the operations of your recorder.

Contents (1)

The items marked with ⚠ in titles contain ⚠ Warning and ⚠ Caution Read these items without fail.

Contents (2)

The items marked with ⚠ in titles contain ⚠ Warning and ⚠ Caution Read these items without fail.

⚠ FOR SAFE USE

1. Preconditions for Use

Your recorder is designed for indoor use by mounting it on an indoor instrumentation panel. (exception: portable types)

| International safety standards | … The alarm output (option) with the "c" contact mechanical relay does not conform to the following standards.

- • IEC standards   Conforms to safety class I (with PROTECTIVE CONDUCTOR TERMINAL) and IEC1010-1 (OVERVOLTAGE CATEGORY II, POLLUTION DEGREE 2)
- • Enclosure productivity   Conforms to IEC529 (IP54)
- • CE (EC Directive)   EMC : Conforms to EN61326
  Safety : Conforms to EN61010-1 +A2
- • UL standards   UL3111-1 (Approval pending)
- • CSA (C-UL) standards   CSA C22.2 No. 1010 (Approval pending)

2. Labels on This Instrument

The following labels are used for safe use.

Label	Name	Meaning
⚠	Alert symbol mark	Caution on handling for prevention of an electric shock, injury or other accidents.
⏚	Protective conductor terminal	A terminal is provided for connection to the protective conductor of the power supply facility in order to prevent any electric shocks.

3. Symbols in This Manual

Cautions to be observed for preventing damage to your recorder and unexpected accidents are indicated by the following symbols according to their degree of importance.

Symbols	Meaning of symbols
⚠	This symbol is shown together with relevant titles (or items) where ⚠ **Warning** or ⚠ **Caution** is attached. Read them with care.
⚠ **Warning**	This symbol indicates a description of cautions for avoiding the possibility of causing serious injury or death due to an electric shock or other accident.
⚠ **Caution**	This symbol indicates a description of cautions for avoiding the possibility of causing slight injury to a person or damage to your recorder or to peripheral units.
Remarks	This symbol shows a caution when your recorder does not function as specified or when such a possibility exists.
Reference	This reference serves to indicate supplementary information for handling and operation for your convenience.

— 4 —

⚠ WARNINGS

This paragraph covers important warnings for safety to be observed before reading the instructions. A full understanding of the following warnings is required. These warnings are important for the prevention of danger to human bodies as well as accidents with your recorder.

1. Switch and overcurrent protective device

Your recorder is not provided with a power switch or a replaceable overcurrent protective device. Prepare a switch and an overcurrent protective device (circuit breakers, circuit protectors or similar units) for the power supply within 3 m of your recorder in a location where you can reach easily.

Use a switch and an overcurrent protective device conforming to IEC948-1 and IEC947-3.
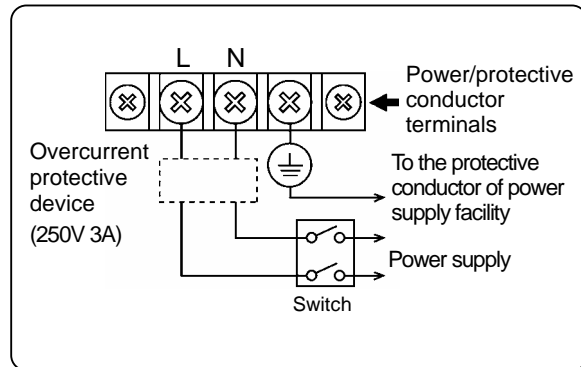

2. Be sure to ground your recorder

Before turning on the power, connect the protective conductor terminal your recorder to the protective conductor of the power supply facility. Do not disconnect this wiring in running of your recorder to prevent an electric shock.

3. Before turning on the power supply

In order to ensure safety, before turning on the external power switch, make sure that the power voltage is within the range indicated on the power supply label.

Reference ⟩ Fuse in power supply unit

The following fuse is mounted in the power supply unit of your recorder for safety use. However, this fuse is not replaceable.

Manufacturer	Model	Ratings
SCHURTER	SPT001.2508	250VAC 2.5A
LITTEL FUSE	21502.5	
WICKMANN	19181	

4. Don't repair or modify your recorder.

Make sure that a service engineer approved by the CHINO CORPORATION is ONLY permitted to repair or modify your recorder by replacing parts. Otherwise, it may be damaged or will not function correctly, or an accident such as an electric shock may result. For usual operation, it is not necessary to pull out an internal unit from a case.

Power supply label

⚠ 100-240VAC 50/60Hz 60VA MAX

Note: This figure is for RD200 series.

5. Use your recorder in accordance with this instruction manual.

Use your recorder correctly and safely in accordance with this instruction manual. CHINO CORPORATION will not be responsible for any injury, damage, lost profit or any other claim, which may result from its wrong use.

6.Turn off the power supply if an abnormal symptom occurs.

If any abnormal odor, noise or any smoke occurs, or if your recorder becomes too hot to be touched, turn off the power supply immediately and contact your local CHINO sales agent.

— 5 —

■ MAJOR FEATURES AND FUNCTIONS

Your recorder can record temperature and other various industrial variables on a 100 mm (if your recorder is RD200) or 180 mm (if your recorder is RD2800) chart for 1 to 4 channels (depending on the number of pens).

(1) Trace printing by pens
(2) Digital data printing to print measured values and other data

1 Features

Major features are shown below.

- Universal input. A range can be selected optionally for every channel from 10 DC voltage ranges, 36 thermocouple ranges and 11 resistance thermometer ranges.
- Universal power supply. The working voltage range is 100 to 240 V AC, 50/60 Hz.
- International safety standards…. CE: Conformance, UL and CSA (C-UL): Approval pending
- The basic operation should be carried out after programming range numbers and the trace printing range.
- You can execute all operation by the front keyboard without pulling out the internal unit. The internal unit cannot be pulled out.

2 Functions

Major functions are shown below.

Display	Printing
● Simultaneous display of the measured values for 1 to 4 channels. ● Analog indication of measured values for 1 to 4 channels with bargraphs. ● Six status lamps ● Switching the operation screens (Measured value, Clock and Alarm Activation) ● Measured values blinks when alarm activates. (Note)	● Trend tracing for 1 to 4 channels ● Fixed-time printing (time line, time, scale, engineering unit, tag) ● Periodic data printing (Measured values are digitally printed at preset intervals.) ● Digital data printing (Measured values are digitally printed on demanding.) ● Message printing ● On or off of time axis synchronization (POC)

(Note) Programming of alarm is necessary. Alarm output is only available when your recorder is with the option of "Alarm Output".

1. GENERAL	1.1 Confirmation of Model No.

Pen type RD200 series and RD2800 series have various specifications. Confirm Model No. of your recorder. Labels showing Model No. are affixed to the top side of the case and to the inside of the internal unit.

RD200

RD204 ·········· Model
AL00 X A001 ·········· Serial No.
MADE IN JAPAN

Note: For pulling out a chart cassette, refer to Section 5.1.

1 Accessories attached

RD200		
Names	Qty	Remarks
(1) Chart	1	RD200-CP-0/100
(2) Mounting bracket	2	For installation to a panel.
(3) Channel indicating card	1	Inserted inside the door.
(4) Cartridge pen (Red)	1	
(5) Cartridge pen (Green)	1	Only for 2 to 4-pen type
(6) Cartridge pen (Blue)	1	Only for 3 to 4-pen type
(7) Cartridge pen (Brown)	1	Only for 4-pen type
(8) Plotter pen	1	
(9) Terminal screw	5	Spare
(10) Lubricating oil	1	For the main shaft of the plotter pen
(11) Instruction manual	1	This manual

RD2800		
Names	Qty	Remarks
(1) Chart	1	180A-CP-0/100
2) Mounting bracket (left, right)	1 set	For installation to a panel.
(3) Channel indicating card	1	Inserted inside the door.
(4) Cartridge pen (Red)	1	
(5) Cartridge pen (Green)	1	Only for 2 to 4-pen type
(6) Cartridge pen (Blue)	1	Only for 3 to 4-pen type
(7) Cartridge pen (Brown)	1	Only for 4-pen type
(8) Plotter pen	1	
(9) Terminal screw	5	Spare
(10) Lubricating oil	1	For the main shaft of the plotter pen
(11) Instruction manual	1	This manual
(12)Wrench	1	For tightening mounting brackets
> **Note** Separate instruction manuals are attached when your recorder is with the options of "Communications interface" and "Math-function and totalizer".

2 Consumables

Charts and pens are consumables. For your ordering, refer to the following table.

RD200			
	Article	Model	Min. qty
Cartridge pen	Red (1st pen)	RD200-01	3 pieces/ bag for each color
	Green (2nd pen)	RD200-02	
	Blue (3rd pen)	RD200-03	
	Brown (4th pen)	RD200-04	
Plotter pen	Purple	RD200/ RD2800-Plotter	3 pieces/ box
Chart	10 meters	RD200-CP-0/100	15 charts/ box

RD2800			
	Article	Model	Min. qty
Cartridge pen	Red (1st pen)	RD2800-01	3 pieces/ bag for each color
	Green (2nd pen)	RD2800-02	
	Blue (3rd pen)	RD2800-03	
	Brown (4th pen)	RD2800-04	
Plotter pen	Purple	RD200/ RD2800-Plotter	3 pieces/ box
Chart	20 meters	180A-CP-0/100	15 charts/ box

2. INSTALLATION	2.1 Location and External Dimensions

1 Location

Install your recorder at the following place so as not to affect the measuring accuracy and recording operation unfavorably.

(1) Industrial environment

Select a place being separated from electric field and magnetic field generating sources and also free of mechanical vibrations and shocks.
- Overvoltage Category II
- Pollution Degree 2
- Altitude................................. 2000m or lower
- Working place ……………...………Indoors

(2) Atmosphere

Install your recorder in a place where no inflammable gas exists and no dust, smoke, vapor, or other dangerous substance exists.

(3) Ambient temperature and humidity

Make sure not to expose your recorder to direct sunlight and not to closely place other materials to it for preventing rise of its temperature.
- The recommended ambient temperature and humidity are about 23°C and about 50%RH.
- Make sure not to expose your recorder to hot air higher than 70°C.
- Make sure not place any heat source near to the terminal board of your recorder.

(4) Mounting angle and display view angle

- Lateral tilting……….. 0° to 10°
- Longitudinal tilting…..Forward tilting: 0°
  Backward tilting: 0 to 30°
- View angle … -10° to +30° based on horizontal
2 External Dimensions

RD200

*1: Recorders with the options of MOS relay or "c" contact alarm output, and communications interface
*2: Recorders with the option of "a" contact alarm output

RD2800

*1: Recorders with the options of MOS relay or "c" contact alarm output, and communications interface
*2: Recorders with the option of "a" contact alarm output

Download from Www.Somanuals.com. All Manuals Search And Download.
⚠ **Warning**   **Install your recorder to a panel.**

Except portable types, your recorder is designed to install to a panel. Use a panel made of a steel plate of 2 mm to 6 mm in thickness.

RD200

1 Panel cutout size

138^{+1}_{0}

138^{+1}_{0}

• Minimum clearance for closed- installation

200

200

(mm)
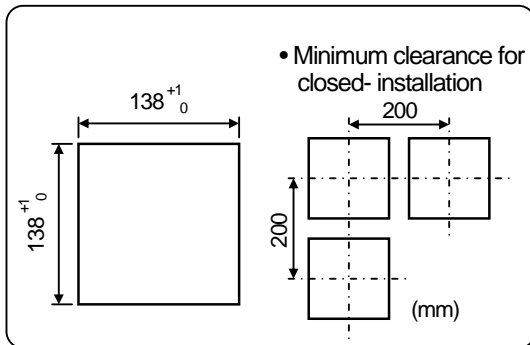

2 Installation

(1) Insert your RD200 (pen type) into the panel cutout from the front of the panel.
(2) Fix your RD200 (pen type) to the panel by the mounting brackets (screw tightening torque: 1.0 N•m). Attach 2 mounting brackets to the top and bottom of this instrument.

Mounting bracket

Mounting bracket

Panel thickness
(2 to 6 mm)

RD2800

1 Panel cutout size

281^{+1}_{0}

281^{+1}_{0}

• Minimum clearance for closed- installation

360

360

(mm)
2 Mounting method

(1) Insert your RD2800 (pen type) into the panel cutout from the front of the panel.
(2) Gently screw a mounting screw into the screw hole of the case (left, right).
(3) Attach the mounting bracket to the case by putting the mounting screw in the large hole of the bracket. Slide the bracket downward to attach it closely to the panel and then tighten the screw with a wrench (screw tightening torque: 1.2 N•m).

Mounting screw

Mounting bracket: Slide it downward and tighten with a wrench.

3. CONFIGULATION

3.1 Front ⚠

All operations of your recorder including the loading of pens can be executed from its front.

| **RD200** | **RD2800** |

⚠ Warning   A window of the door

The window of the door is made of glass material. To prevent injuries by destroying it, do not apply an impact or strong force to the door.
(1) Display panel

The display panel is consisted of character displays, status lamps and bargraph displays.

For loading the pens, open the display panel by swinging it out from the right side. An illumination for chart is mounted on the back of the display panel.

(2) Chart paper cassette

The chart paper cassette is for loading a chart to your recorder. Remove it for the loading of chart. When your recorder is RD200, remove the chart paper cassette by swinging down the keyboard.

(3) Keyboard

The sheet switch type keys are used in the keyboard.

● Operation keys

Keys	Operations	Ref. page	Keys	Operations	Ref. page
DISP	Switches operation screen.	6.4	SHIFT + 9 LIST *1 → ENTRY	List printing	9.3
ENTRY	Stops blinking of display.	10.3	0 CLEAR + 6 A~Z (3 sec. or more) *2 → ENTRY	Message printing	9.4
REC ON/OFF → ENTRY	Switches printing on/off	6.2			
FEED	Fast forwarding of chart	6.3	REC ON/OFF (3 sec. or more) (With recording disabled)	Pen replacing mode	5.3
DATA PRINT → ENTRY	Digital data printing	9.2			

*1: Selection of List 1 or List 2.   *2: Selection of Message No. (1 to 5)

● Programming keys

The keys are different on programming items. See Section 7.3 for details.
(1) Characters
- Operation mode: Displays measured value, time, chart speed, and alarm status of each channel (CH).
See Section 6.4 for details.
- Programming mode: Displays programming items and programming parameters in an interactive method.

(2) Underline

Shows the trace printing color of each channel (CH).

(CH 1: Red, CH 2: Green, CH3: Blue, CH 4: Brown)

These underlines also function as a cursor appearing at the digit for programming parameter in the programming mode.

(3) Status

Display	Lighting condition	Section
ALARM	When an alarm activates.	10.3
CHART END	When the end of chart is detected.	6.2
FAIL	When the hardware related to servo-circuit/mechanism is abnormal.	
POC	When the time axis synchronization is enabled.	9.6
RECORD ON	When the printing is on (enable).	6.2
KEY LOCK	When the keys are locked.	11.12

(4) Bargraph

The bargraphs indicate the measured value of each channel in an analog form. These indications are interlocking to the positions of the pens for trace printing.

Resolution   RD200: 1/50 (2%), 51 segments

RD2800: 1/100 (1%), 101 segments

The terminal boards shown in the following figure are of recorders with the options (alarm output + remote contacts and communications interface).

RD200

Communications terminals (option)

Power supply terminals

Remote contacts terminals option)

Power supply terminals (option)

Measuring input terminals

RD2800

Communications terminals (option)

Power supply terminals

Remote contacts terminals (option)

Power supply terminals (option)

Measuring input terminals

*The mechanical relay "c" contact output is consisted of three terminals of N.O, COM and N.C.

Reference > The input terminal and alarm terminal blocks are removable.

The input terminal block and alarm terminal block (including the remote contacts terminal block) are removable for easy connections. Each terminal block can be taken out by removing two mounting screws. Each terminal block is connected to your recorder by a connector. For mounting or dismounting the terminal block, turn off the power switch to prevent the electric circuits from being damaged.

RD200

Input terminal block

Mounting screw

RD2800

Input terminal block

Mounting screw
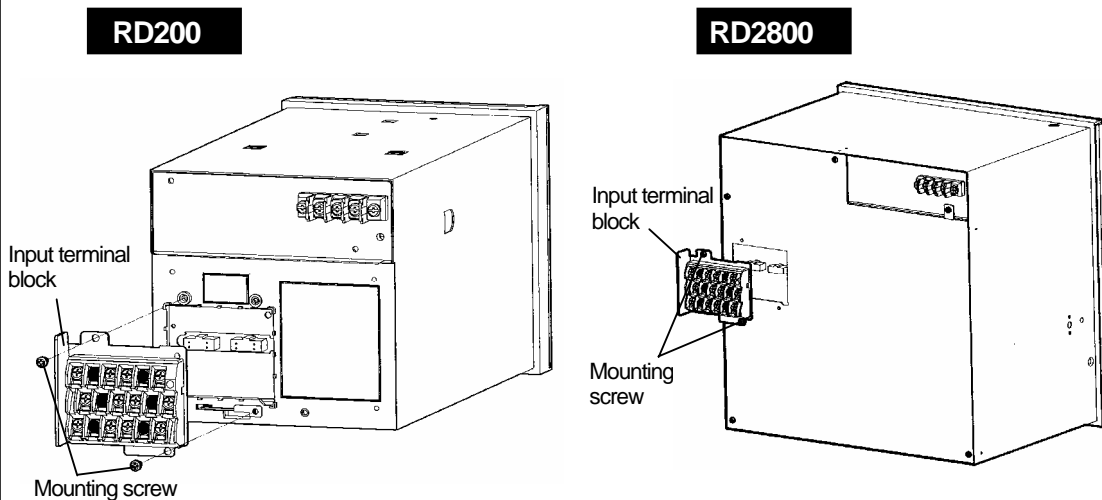

Remarks

Removed terminals have to be remounted to the recorder to which they were originally mounted. Mounting them to other recorders may cause a malfunction in scaling.

4. CONNECTIONS | 4.2 Cautions on Connections ⚠

Observe the following cautions during connections for securing safety and reliability.

1 Power supply

Use a single-phase power supply having a stable voltage without any waveform distortion for the purpose of preventing wrong operations.

| ⚠ **Warning** | **A switch and an overcurrent protective device** |

Prepare a switch and an overcurrent protective device (3 A) to the power supply for preventing an accidental electric shock during connection work. This instrument is not provided with any replaceable overcurrent protective device.

| ⚠ **Warning** | **Turn off the power supply before starting connections.** |

Make sure to turn off the power supply before connecting the power and the input/output terminals to prevent an electric shock.

2 Keep the input/output connections away from high voltage power circuits

Don't place the input/output cables close to or in parallel with any strong power circuits including power lines. Place the cables 50cm or more away from high voltage power circuits when they are placed close to or in parallel to other circuits.

3 Keep the thermocouple input away from a heat source

For thermocouple inputs, keep the input terminals away from a heat source (a heating body) to reduce a reference junction compensation error. Don't expose the input terminals to direct sunlight, etc.

4 Keep the input/output connections away from noise source

Keep all connection cables away from noise source as far as possible, otherwise a malfunction may occur. Provide a solution if the cables cannot be separated from a noise source due to unavoidable circumstances.

Major noise sources	Remedial measures
Electromagnetic switch, etc. Power line having waveform distortion, Inverter, Thyristor regulator	Insert noise filters between power terminals and input/output terminals. A CR filter is often used.

5 Use crimp style terminals
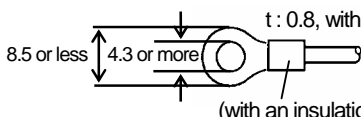

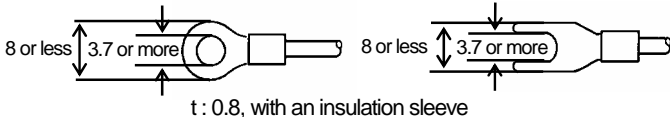

(1) Mount crimp style terminals for connection cable terminations to prevent any looseness or disconnection of terminals or a short-circuit failure between terminals.

(2) Use the crimp style terminals with an insulation sleeve to prevent an electric shocks.

6 Unused terminals

Don't use any unused terminals for relaying, otherwise the electric circuits may be damaged.

| ⚠ **Warning** | **Secure the connected cables properly.** |

Secure the connected cables so as not to allow them to be hooked by a person or a substance, otherwise the connections may be cut and disrupted, and may cause an electric shock or other accidents.

Reference > Kinds of terminals and termination

Terminal block	Screw diameter	Tightening torque	Termination (unit: mm)
Power and protective conductor terminals	M4	1.2N•m	t : 0.8, with an insulation sleeve 8.5 or less 4.3 or more (with an insulation sleeve)
Terminals other than described above	M3.5	0.8N•m	8 or less 3.7 or more 8 or less 3.7 or more t : 0.8, with an insulation sleeve *Use Type O chip (on the left) whenever possible.

1 **Power and protective conductor terminals**

Power terminals

L   N   ↓

⊗ ⊗ ⊗ ⊗ ⊗

⚠ 100-240V AC
50/60Hz 60VA MAX ⏚

Power supply (voltage, frequency, power consumption)
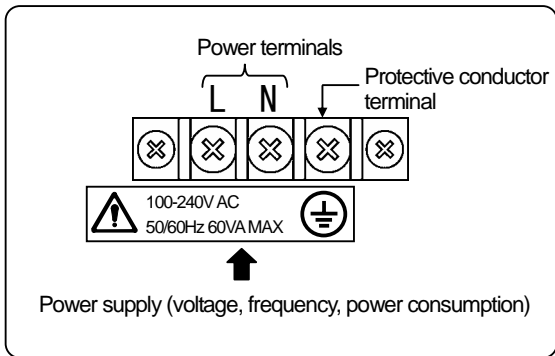

2 **Connection of power terminals**

For connection to the power terminals, use a 600 V PVC insulated cable (IEC 227-3 See "Caution") terminated by the crimp style terminals with insulation sleeve.

Note) Use the cords approved by the following standards.

(1) IEC 227-3
(2) ANSI/UL817,
(3) CSA C22.2 No.21/49

⚠ **Caution** **Be careful with the power voltage and noises.**

The power voltage of your recorder is indicated beside the power terminals. Don't apply any voltage other than the rated voltage. Otherwise a malfunction may result.
If noise is contaminated in the power supply, provide a noise reduction transformer, etc.

3 **Connection of protective conductor terminal**

Make sure to connect this terminal to the protective conductor of the power supply facility. For this connection, use a cable terminated by the crimp style terminals with insulation sleeve.

• Grounding wire: Copper wire 2 mm^2 or more

⚠ **Warning** ⚠ **mark at power terminals**

A voltage of 100 to 240 VAC is applied to the power terminals after connections. Be sure to mount the power terminal cover to prevent an electric shock.

⚠ **Warning** **Turn off the power supply.**

Make sure to turn off the power supply before the connections to the power and protective conductor terminals for preventing an electric shock.

Remarks **L/N indication of power terminals**

This indication conforms to the CSA standard, Canada. The live side of the single-phase AC power supply is indicated as L, and the neutral side is indicated as N. Observe the L and N connections for obtaining satisfactory performance.

L   N

⊗ ⊗ ⊗ ⊗ ⊗
⏚

Mount the terminal cover after connections. (Illustration below)

A copper wire with diameter of 2 mm^2 or more (green/yellow)

Make sure to connect to the protective conductor of the power supply facility.

600 V vinyl insulated cable

Power supply

— 1 5 —
1 Measuring input terminals

Make sure to turn off the power supply to prevent an electric shock.

(1) Measuring input terminals are located on the down left of the terminal board.

(2) For the connections to the input terminals, use cables terminated by crimp style terminals with insulation sleeves.

⚠ **Caution** **Allowable input voltage**

Input type	Allowable input voltage
Voltage, Thermocouple input	±10 VDC (range: ±2V or less) ±60 VDC (range: ±5V or more)
Resistance thermometer input	±6 VDC

2 Connections of DC voltage (current) input

Use twisted cables for instrumentation as the input cables for the purpose of suppressing noise. For current inputs, mount shunt resistors (Section 16.2) to the channels to be measured before connections.

DC voltage input

Terminal **cover**
3 Connections of thermocouple inputs

Make sure to use thermocouple wires (or extension wires) to the input terminals of your recorder. If a copper wire is used halfway, a noticeable measuring error occurs. Don't use a pair of thermocouple wires in parallel with other instruments (controller, etc.), otherwise a malfunction may occur.
4 Connections of resistance thermometer inputs

Use a 3-core cable where each lead wire has an equal resistance value. Don't use one resistance thermometer in parallel with other instruments (controller, etc.).

Note: Use a 3-core cable where each lead wire has an equal diameter and an equal resistance
⚠ **Warning** ⚠ **mark of measuring input terminals**

A high voltage may be applied to the measuring input terminals due to common mode noise. The allowable noise value is 30 VAC or less, or 60 VDC or less. Make sure that the noise is lower than the allowable value. Mount the terminal cover after connections for the purpose of preventing an electric shock and to protect the input wires. In the case of thermocouple input, the mounting of the terminal cover can reduce the reference junction compensation error.

4. CONNECTIONS | 4.5 Alarm Output Terminals ⚠

These terminals are for the alarm output (option), which is (1) MOS relay type, (2) mechanical relay "c" contact type or (3) mechanical relay "a" contact type. The mechanical relay "c" contact type does not conform to the international safety standards.

1 Alarm output terminals

The terminal arrangement depends upon the type of alarm output.

Terminal and relay No.

Terminal block	RD200	RD2800
1	No. 1 to 6	No. 1 to 6
2		No. 1 to 12

[Remarks]Only one terminal block is provided for the remote contacts terminals.
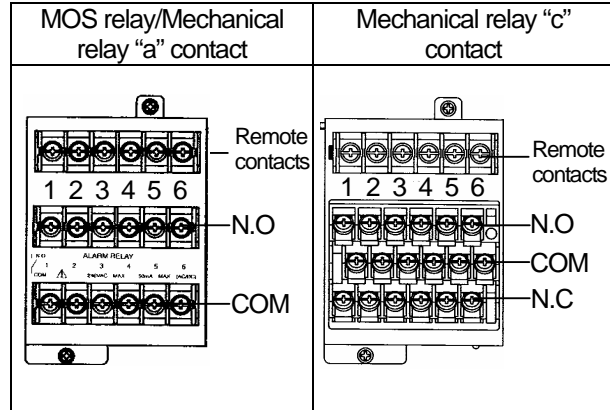

2 Connections

Turn off the power supply and buffer relay power supply before the connections for preventing an electric shock.
(1) Connect cables to a load via a buffer relay.
(2) Use cables with crimp style terminals and insulation sleeves for the alarm output terminals.

⚠ **Caution** **Take safety measures.**

The alarm output of your recorder may become defective. This may be caused by wrong operation, failure or other abnormal inputs. Take safety measures against an output failure before use if necessary.
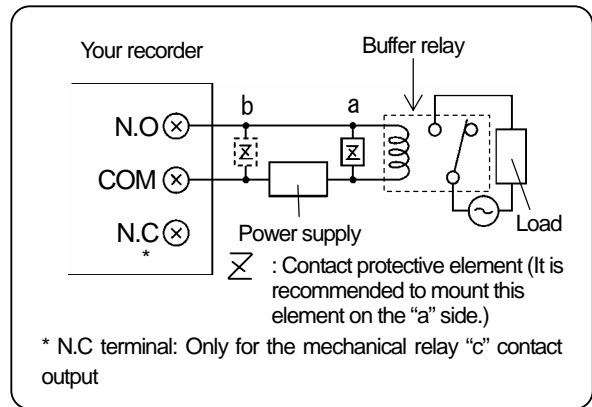

3 Cautions on connections

1) Output contact rating
(1) MOS relay

Maximum voltage	240 V (AC, DC)
Maximum current	50 mA (AC, DC)

(2) Mechanical relay

Power supply	Resistive load	Inductive load
100 VAC	0.5 A	0.2 A
240 V AC	0.2 A	0.1 A
100 V DC	0.3 A	0.1 A

MOS relay/Mechanical relay "a" contact — Remote contacts, 1 2 3 4 5 6, N.O, COM

Mechanical relay "c" contact — Remote contacts, 1 2 3 4 5 6, N.O, COM, N.C

Your recorder — N.O, COM, N.C; Buffer relay; Power supply; Load

⊼ : Contact protective element (It is recommended to mount this element on the "a" side.)

* N.C terminal: Only for the mechanical relay "c" contact output

⚠ **Warning** ⚠ **mark for alarm output terminals**

A buffer relay power supply is applied to the alarm output terminals after connections. Don't touch these terminals for preventing an electric shock. Make sure to mount the terminal cover after connection.

2) Mounting of contact protective element
(1) Mount a contact protective element conforming to the buffer relay.
(2) To prevent a malfunction being caused by a light load, the most effective mounting position for the element is on the coil side of the buffer relay ('a' in the above diagrams)
(3) The MOS relay will be broken, even if a signal exceeding the contact rating is momentarily applied.

4. CONNECTIONS | 4.6 Remote Contacts Terminals ⚠

These terminals are for the remote contacts (option). For the remote contacts, see Section 13.

1 Remote contacts terminals

Remote contacts terminals

Alarm output terminal (option)
⚠ Warning No-voltage contacts

For the contacts to be connected to the remote contacts terminals, use a switch or relay driven at 30 VAC or lower, or 60 VDC or lower, or manual contacts for very light loads.

Remarks Remote contacts terminals

- Voltage when the contact is open: Approx. 5 V
- Current when the contact is short: Approx. 2 mA

2 Wiring

To prevent an electric shock, make sure to turn off the power supply before wirings.

(1) The signals applied to the remote contacts terminals should be non-voltage contact signals.

(2) Connect wires to the remote contacts terminals with crimp style terminals and insulation sleeves

EX1 EX2 EX3 EX4 COM
Reference Remote contacts

1. Remote contacts operations
   (1) Printing ON/OFF and chart speed selection from 3 speeds (Using 2 terminals EX1 and EX2)
   (2) Message (Nos. 1 to 5) selection and printing (Using all of 4 terminals EX1 to EX4)
   (3) Message (Nos. 1 and 2) selection and printing (Using 2 terminals EX3 and EX4)
   (4) Digital data printing *
   (5) List (Nos. 1 to 3) printing *
   (6) Operation record (Nos. A to D) printing *

－ 1 9 －

3 RS-422A, RS-485 Connections

RS-422/485 communications interface is connected to a personal computer via a line converter (our Model SC8-10: sold separately). Three signals of SD, RD and SG are used between the line converter and the personal computer but any control signal is not used. Wiring processing for control signal in a connector is necessary in the same as 2 RS-232C connections.

1) RS-422A
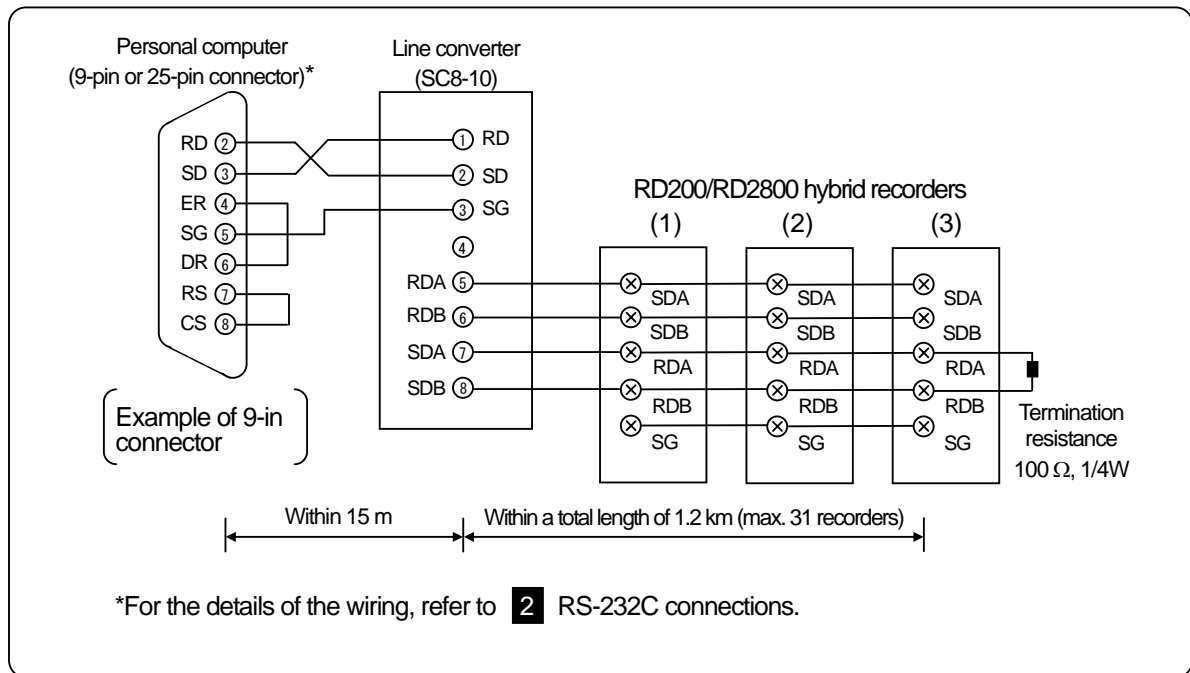

*For the details of the wiring, refer to 2 RS-232C connections.

2) RS-485

*For the details of the wiring, refer to 2 RS-232C connections".
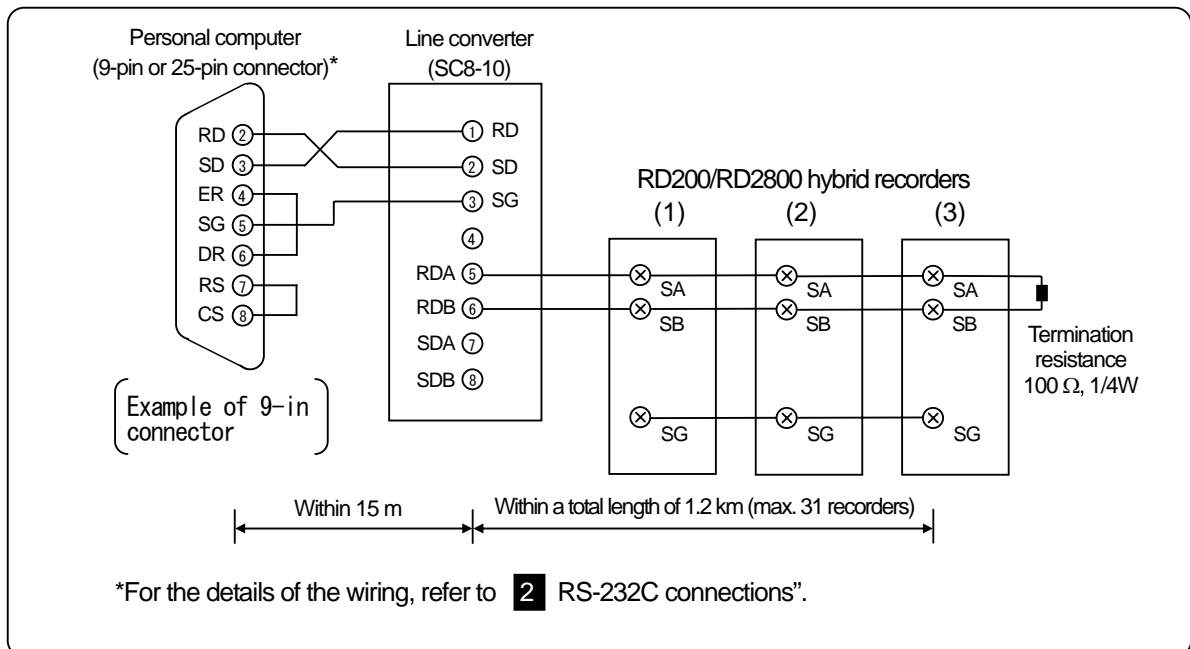

1 Chart Paper Cassette Removal

1) Open the door.
2) Swing down the keyboard.
3) Remove the chart paper cassette.

Pens lift up when the chart paper cassette is removed.
2 Chart Paper Loading

1) Open the chart paper holders.

Open the chart paper guide and the stripper plate.
2) Prepare a chart paper

Shuffle both end of the chart paper to prevent two or more chart papers from fed being together.
3) Put it into the chart paper housing.

The shapes of the sprocket holes on the right and left sides are different. The right side holes are an elliptical shape.

－ 2 1 －
3 Chart Paper Setting

1) Draw out the chart paper approx. 20 cm and close the rear stripper plate.
2) Set the holes on the chart paper over the sprockets at both ends of the drum.
3) Use the thumb wheel to advance the chart paper for 2 to 3 folds into the chart tray.
4) Close the front chart paper guide. Make sure that the holes are set over the sprockets.

Set the holes on the chart paper to the sprockets.
Remarks ▷ Chart paper folds

Don't insert the chart paper folds reversely when inserting the chart paper into the chart paper tray, otherwise a folding failure results.
Folding section

Chart paper

---

4 Check

1) Manual check

Turn the thumb wheel by hand to make sure that the chart paper is feeding properly.

Remarks ▷ Turning direction of thumb wheel

Don't turn the thumb wheel inward. The chart paper cannot be fed backward. This action may cause a chart paper feed failure.

Thumb wheel

(Top view)
2) Place the chart paper cassette in its original position

Place the chart paper cassette with the chart paper loaded in your recorder.

(1) Guide rails for the chart paper cassette are located on the right and left side of the internal unit. Set the guides of the chart paper cassette to the guide rails and push it until it clicks into place.

(2) Return the keyboard back in its original position.

3) Chart paper feeding check

(1) Turn on the power supply.

(2) Press the ⌑FEED⌑ key and check the chart paper feeds smoothly.

(3) Repeat the above procedure if the chart paper is not fed smoothly.

4) Operation during chart end detection

When the chart paper cassette is returned in the internal unit during the chart end detection, the CHART END display blinks. Press ⌑ENTRY⌑ to turn it from blinking to steady lighting.

Press ⌑ENTRY⌑ again. The CHARD END display goes out and the chart paper is fed automatically.

1 Chart Paper Cassette Removal

1) Open the door.
Grip

2) Remove the chart paper cassette.

(1) Pull the grip of the chart paper cassette and take the chart paper cassette slightly out of the internal unit. (Pens lift up.)

(2) Pull the grip slowly to take the chart paper cassette out of the internal unit completely.

Chart paper cassette   Guide rail   Guide
⚠ **Caution** **Be careful with the corners of the rear stripper plate**

The sharp corners of the rear stripper plate help to feed the chart paper smoothly. Be careful not to cut your fingers when loading or replacing the chart paper.

⚠ **Caution** **Don't remove the chart paper cassette during printing.**

Don't remove the chart paper cassette during printing by a plotter pen. The cassette may hit 1st pen during the automatic pen lift-up function executed.

2 Chart Paper Loading

1) Open the chart paper holders.

Open the chart paper guide and the stripper plate.

Stripper plate
Chart paper guide
⚠ **Caution**
Open from here.
2) Prepare a chart paper.

Shuffle both end of the chart paper to prevent two or more chart papers fed being together.
3) Put it into the chart paper housing.

The shapes of the sprocket holes on the right and left sides are different. The right side holes are an elliptical shape.

Printing side (Caution in red)

4 Check

1) Manual check
   Turn the thumb wheel by hand to make sure that the chart paper is feeding properly.

Remarks ▷ Turning direction of the thumb wheel

Don't turn the thumb wheel inward. The chart paper cannot be fed backward. This action may cause a chart feed failure.

Thumb wheel
2) Place the chart paper cassette in its the original position
   Guide rails for the chart paper cassette are located on the right and left side of the internal unit. Set the guides of the chart paper cassette to the guide rails and push it until it clicks into place.

3) Chart paper feeding check
   (1) Turn on the power supply.
   (2) Press the [FEED] key and check that chart paper feeds smoothly.
   (3) Repeat the above procedure if the chart paper is not fed smoothly.

4) Operation during chart paper end detection
   When the chart paper cassette is returned in the internal unit during the chart end detection, the [CHART END] display blinks. Press [ENTRY] to turn it from blinking to steady lighting.
   Press [ENTRY] again. The [CHARD END] display goes out and the chart paper is fed automatically.
   .

1 Recording Pen Types

(1) There are two types of recording pens, the plotter pens for use in digital printing and cartridge pen for use in trace printing.

(2) There are four kinds of cartridge pens for 1st pen to 4th pen. These are of same shape but differ in ink colors.

1st pen: Red	3rd pen: Blue
1st pen: Red	3rd pen: Blue
2nd pen: Green	4th pen: Brown

2 Preparation for Installation

1) To remove the chart paper cassette
   RD200 ➤ See Section 5.1.1.
   RD2800 ➤ See Section 5.2.1.

2) Open the display panel.
   Swing out the panel from the right edge.

3) Set to the pen replacement mode.
   (1) Turn on the power supply.
   (2) If the status RECORD ON lights, go it out by pressing REC ON/OFF and then ENTRY. (Pens lift up.)
   (3) Press and hold REC ON/OFF down for 3 seconds. The pens return to original positions and then move to the center.
   (4) Each press of ENTRY moves each pen to the "zero" position. Replace each pen at its "zero" position.

Plotter pen		Common for the RD200 and RD2800
Cartridge pen	For RD200	For RD2800

• Pen holders for RD200

4th pen 3rd pen 2nd pen 1st pen

Plotter pen

• Pen holders for RD2800

4th pen 3rd pen 2nd pen 1st pen

Plotter pen
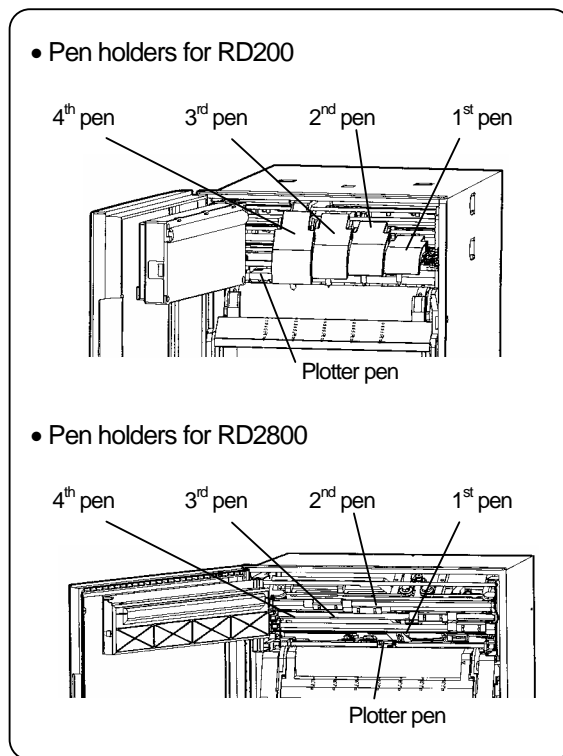

Remarks ➤ Maintenance of pens

1. Pen tip
   The pen tip is made of felt material. If an excessive force is added to it, the top of the pen tip will be crushed making clear printing or tracing impossible.

2. Pen cap
   Each pen is provided with a pen cap for preventing drying and protecting the pen tip. Remove and retain the pen caps before the pen installation.

3. Before stopping recording for long hours
   When it is expected that recording will not be executed for a day or more, remove and store the pens by attaching the pen cap to them. If the pens are left installed while no recording is executed, the ink will stain the chart paper.

3 Plotter Pen Loading

(1) Before loading, remove the pen cap from the plotter pen and write letters on a paper, etc. for testing.

(2) Insert the plotter pen into its penholder completely.

(Note) Incomplete insertion may result in recording troubles.

(3) For unloading of the plotter pen, pull it from the penholder.

Plotter pen loading
4 Cartridge Pen Loading

(1) Before loading, remove the pen cap from the cartridge pen and write letters on a paper, etc. for testing.

(2) Push the cartridge pen into the penholder for the same pen No. as the pen.

Cartridge Pen Loading

• **RD200**

Insert ① first, then push in ② .

• **RD2800**

Push in.
(3) For unloading of the cartridge pen,

- RD200: Pull out the left side of the pen from the holder, and then take off it by disengage its convex part at the right side of the holder.
- RD2800: Pull the pen from the holder.

1 Power Supply On/Off

Your recorder is not provided with a power switch. Prepare an external power switch for turning on or off its power supply.

2 Initial Operation

By turning on the power supply, 1) year, month and day are displayed. After initialization, 2) year, month, day and time are printed (Printing when the power is turned on) and 3) the normal operation starts.

Power switch installation

- Power and protective conductor terminals
- Overcurrent protective device (250V 3A)
- To protective conductor of power supply facility
- Power supply source
- Power switch
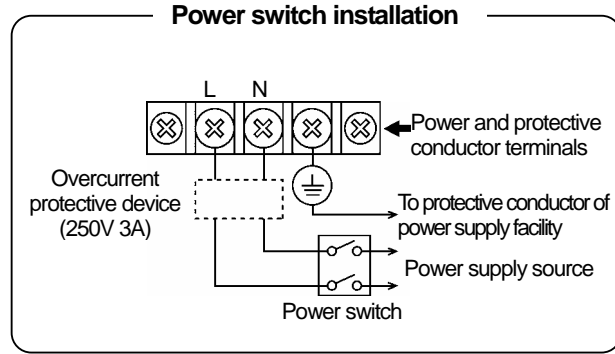

3 Operation

1) Operation screen

(1) Measured values for all channels (CH 1 to 4: depending on the numbers of input points) are digitally displayed.

(2) Measured values for all channels (CH 1 to 4: depending on the numbers of input points) are displayed by bargraphs.

(3) A corresponding status lamp lights. The default is RECORD ON .

Example of operation screen (3-pen type)

Ch 1   Ch 2   Ch 3   Chart speed

Measured value — 37.2 145.0 42.6 20H

CH 1
CH 2
CH 3

Status — RECORD ON

Bargraph

(Note) The above example is for RD200. It is the same for RD2800.
2) Chart paper feeding

The chart paper is fed at the programmed chart paper speed. (The default speed is 20 mm/h for RD200 and 25 mm/h for RD2800.)

3) Printing

(1) Trace printing

Measured values are traced by a cartridge pen.

<Ink colors> CH 1: Red, CH 2: Green, CH 3: Blue, CH 4: Brown

(2) Digital data printing

a. Fixed-time printing

The following data is printed at preset time intervals.

- Time line   - Time   - Year/Month/Day   - Chart speed
- Scale   - Engineering unit   - Tag

b. Other printings

The following printings are executed according to programming and operation.

- Periodic data printing   - Digital data printing   - List 1, 2 and 3   - Programming change mark
- Alarm activation/reset   - Message   - Operation printing line and No.   - Time axis synchronization mark

Trace printing and fixed-time printing

(Note)   The above example is for RD200.
It is the same for RD2800.
1 Printing On/Off

Every time pressing $\boxed{\text{REC ON/OFF}}$ then $\boxed{\text{ENTRY}}$ within 5 sec., the printing function switches to on or off.

| Printing ON | $\Longrightarrow$ | $\boxed{\text{RECORD ON}}$ lights. |
| Status |

$\boxed{\text{REC ON/OFF}}$ → $\boxed{\text{ENTRY}}$ $\boxed{\text{Remarks 1}}$

Status

| Printing OFF | $\Longrightarrow$ | $\boxed{\text{RECORD OFF}}$ goes out. |

$\boxed{\text{REC ON/OFF}}$ → $\boxed{\text{ENTRY}}$ $\boxed{\text{Remarks 2}}$

$\boxed{\text{Reference 1}}$ **Printing status when turning on the power supply**

When turning on the power supply, the printing maintains the condition (on or off) when it was turned off last time.

$\boxed{\text{Reference 2}}$ **Up and down of pens**

(1) When the printing is turned off, each pen lifts up automatically. Even if the power is turned off in this condition, this pen position is maintained.
(2) When the chart cassette is pulled out, each pen lifts up. If the printing has been turned off when pulling out the chart cassette, each pen has already been lifted up and it maintains its position.

Status display when printing is on

Lights when the printing is on.

$\boxed{\text{Remarks 1}}$ **No printing on/off operation executed**

(1) The printing on/off operation is not executed when the status $\boxed{\text{KEY LOCK}}$ lights. For its cancellation, see Section 11.13.
(2) The printing on/off operation is not executed when the printing is turned off by the remote contacts signal (option). See Section 13.1.

$\boxed{\text{Remarks 2}}$ **Execution by pressing $\boxed{\text{ENTRY}}$ key**

(1) $\boxed{\text{PUSH Entry}}$ appears for about 5 sec. when pressing $\boxed{\text{REC ON/OFF}}$ key. Press $\boxed{\text{ENTRY}}$ during this display to execute the printing on/off operation.
(2) The printing on/off operation cannot be executed by pressing $\boxed{\text{ENTRY}}$ after this display goes out.
  In such case, press $\boxed{\text{REC ON/OFF}}$ and then $\boxed{\text{ENTRY}}$ again.

2 Printing Operation

The table below explains the printing operation when the printing is on or off.

Operation	ON	OFF
Chart feeding	Execute	Stop
Trace printing (Cartridge pen)	Execute	Up where it is
Digital data printing (Plotter pen)	Execute	Up at standby position
Up and down of pens	Down	Up

3 Chart End Detection

When the chart end is detected during the printing is on, the printing is switched to off and $\boxed{\text{CHART END}}$ blinks. Each pen lifts up automatically and the printing is stopped.
For continuing the printing, refer to "Chart loading" in Section 5.1 and 5.2.

When pressing [FEED] , chart is fed at the speed of about 0.1mm/sec. When pressing [FEED] more than 1 sec, chart is fed at the speed of about 10mm/sec.This operation is used for the following purposes.

(1) Setting the time scale line of the chart paper

(2) Checking of chart paper feeding operation

Remarks ▷ **Fast feeding condition and operation**

1. Condition ….. (1) For the fast feeding of the chart paper, the status KEY LOCK should be gone out.

(2) This function cannot be executed during printing.

2. Operation …..Digital data printing is not executed during the fast feeding of the chart paper.

This function can be executed when the printing is off (RECORD ON goes out.).

Reference 1 ▷ **Manual chart feeding**

Pull out the chart paper cassette slightly from your recorder. Turn the thumb wheel on the left side of the drum.

RD200

Thumb wheel
(Gear)
RD2800
Thumb wheel
(Gear)

Note: Even if the time scale line is set by manual chart paper feeding, a delay may occur due to the back lash of the thumb wheel (gear).

Remarks 2 ▷ **Time scale (1 to 24)**

Numeric values of 1 to 24 are marked on the left side of the chart paper. These are time scales when operating the printing at a chart speed of 20 mm/h for RD200 or 25mm/h for RD2800.

For RD200, three operation screens, (1) measured value screen, (2) clock screen and (3) alarm activation screen, are available. Each time ⌐DISP⌐ is pressed, the screen switches. Bargraphs for analog indications are displayed in any of these screens.

```

ALARM   RECORD ON
Explanation for the display

In each channel, the alarm level 1, 2, 3 and 4 are allocated to the digits from the left end. The alarm type shall be displayed only at the digit where an alarm activates.

For alarm types, see Section 11.5, item 1 .

Alarm type at level 1
Alarm type at level 2
Alarm type at level 3
Alarm type at level 4
1 Keys and Their Abbreviations

Actual keys	Key abbreviations used in this manual

Actual keys:

DISPLAY / RECORD FORMAT | SPACE COPY(=) | — ~(~) | 7 RANGE | 8 ALARM | 9 LIST | RECORD ON/OFF | FEED | DATA PRINT

SET END | · CLOCK | 4 SCALE | 5 DATA I | 6 A~Z | % | /

SHIFT | 0 CLEAR | 1 CHART | 2 TAG | 3 UNIT | ◄ ℃ | ► °F | ENTRY

Key abbreviations used in this manual:

DISP | SPACE COPY(=) | — ~(~) | 7 RANGE | 8 ALARM | 9 LIST | REC ON/OFF | FEED | DATA PRINT

SET END | · CLOCK | 4 SCALE | 5 DATA I | 6 A~Z | ▼ % | ▲ / | ENTRY

SHIFT | 0 CLEAR | 1 CHART | 2 TAG | 3 UNIT | ◄ ℃ | ► °F

2 Characters Displayed in Programming

Except for the leftmost digit, characters including alphabets are displayed as shown below due to the restriction with 7-segment LCD.

7-segment LCD
A	B	C	D	E	F	G	H	I	J	L	L	M	N	O
A	b	C	d	E	F	G	H	ı	J	h	L	ñ	n	o

P	Q	R	S	T	U	V	W	X	Y	Z				
P	/	r	S	t	U	ы	ы	/	y	≡				

1	2	3	4	5	6	7	8	9	0	Space	Minus	Hyphen	Colon	To
1	2	3	4	5	6	7	8	9	0		–	–	:	┘

3 Key Operation

Remarks **Don't press keys with hard and sharp objects**

The keys are composed of sheet switches containing electrical circuitry inside. If a key is pressed with a hard and sharp object, malfunctions due to wire disconnection or insulation breakdown may occur.

Press a single key.	Press two keys simultaneously.	Press two keys simultaneously for 3 sec. or longer
<Example> To program "6":	<Example> To program an alphabet letter:	<Example> To move the "Engineering" programming mode:
6 A-Z	SHIFT + 6 A-Z	(SHIFT + 6 A-Z) 3 sec. or more
	Press (SHIFT)key first. 0.5 sec.*	Press (SHIFT)key first. 3 sec. or more

*Press the key for about 0.5 sec. and release it as soon as the display changes. If another screen appears by holding the key down for 3 sec. or more, press DISP to return to the original screen and press the key for about 0.5 sec. again

1 Functions by Pressing Single Key

Keys	Names	Functions
[DISP]	Display	Stops programming and returns to the operation screen. For certain programming items, holding this key down for 2 seconds or more is required.
[SPACE COPY(=)]	Space	(1) Deletes a numeric value or decimal point at an unnecessary digit. (2) Programs "Blank" in the programming of [engineering unit] or [tag].
[SET END]	Program	Changes from programming mode (confirmation of parameters) to the programmable condition. The programming lamp lights and the cursor appears at the programmable leftmost digit.
[SHIFT]	Shift	Press this key first for using the key functions being indicated on the lower case of each key.
[' (-)] [CLOCK] [0 CLEAR] ∫ [9 LIST]	Minus, Decimal point, 0 to 9 (Numeric values)	(1) Press these keys for programming a numeric value. (2) For programming a decimal point, move the cursor to the next digit and press [CLOCK] before entering a numeric value. (3) For deleting a decimal point, move the cursor to the next digit and press [SPACE COPY(=)] .
[↑] [▼ %]	Up / Down	(1) For items to program by selecting from menu, this key steps the menu forward or backward. (2) For items to program parameters per channel in the programming mode (confirmation of parameters), this key steps the channel No. forward or backward.
[◄ °C]	Left cursor	Moves the cursor leftward.
[► ㊱]	Right cursor	Moves the cursor rightward.
[ENTRY]	Entry	(1) Programming items common to channels: Stores the programmed parameter into memory. (2) Programming items per channel: Stores temporarily the programmed parameter in the channel No. selected. Press [SHIFT] + [SET END] to store it into memory. (3) Printing on/off, data printing or list printing is executed by pressing this key.
[REC ON/OFF]	Printing on/off	Selects on (enable) or off (disable) of printing. Press [ENTRY] to go this selection active.
[FEED]	Feeding	The chart paper is fast fed when holding this key down.
[DATA PRINT]	Data print	Prints the measured values at the moment the key is pressed digitally on the trace printing. Press [ENTRY] to go this printing active.

2 Functions by Pressing Two Keys Simultaneously

Keys	Names	Functions
[SHIFT] + [SET END]	End	Stores the programmed parameter, which is temporarily stored, into memory.
[SHIFT] + [' (-)]	To	Inserts [~ (')] between minimum and maximum values.
[SHIFT] + [0 CLEAR]	Clear	Clears (Blanks) the programmed parameter displayed.
[SHIFT] + [6 A~Z]	Alphabetic characters	Each time [↑] is pressed, characters step in the order of A, B, C …..
[SHIFT] + [9 LIST]	List printing	Programmed parameters are printed as a list. Press [ENTRY] to go this printing active.
[SHIFT] + [▼ %]	%	Programs "%" (percent) character.
[SHIFT] + [↑]	/ (=)	Programs "/" (slash) character. This is also "=" in the subtract printing programming mode.
[SHIFT] + [◄ °C]	°C	Programs "°C" (degree Centigrade) character.
[SHIFT] + [► °F]	°F	Programs "°F" (degree Fahrenheit) character.
1 Parameters to be Programmed First

Parameters	Key operations	Programming items	Defaults	Programming ranges	Ref. page
Range/ printing range*	SHIFT + 7 RANGE	Range No.	07	01 to 10, 21 to 56, 70 to 80	8.2
		RJ enable/ disable	0	0 (disable), 1 (enable: thermocouple range only)	
		Printing range	0.000 to 5.000	Max. 10 digits (minimum value to maximum value). Excluding decimal point.	
°C/°F calculation	SHIFT + ▶ 36 (3 sec. or more)	——	°C	°C (°C calculation) °F (°F calculation) Thermocouple and resistance thermometer range only	8.3
Chart speed	SHIFT + 1 CHART	——	20/25 *	0001 to 0600 mm/h or 0001 to 0200 mm/min.	8.4

* RD200: 20 mm/h, RD2800: 25 mm/h

2 Other Programmable Parameters and Functions

Parameters	Key operations	Programming items	Defaults	Programming ranges	Ref. page
Clock	SHIFT + ● CLOCK	——	Japanese time	2000.01.01.00:00 to 2099.12.31.23:59	11.1
Scale *	SHIFT + 4 SCALE	——	0.000 to 5.000	Max. 11 digits (minimum value to maximum value), excluding decimal point. Printing range reflects to the scale. Therefore no programming is normally necessary for thermocouple and resistance thermometer range.	11.2
Skip *	SHIFT + 7 RANGE	——	Not programmed	Programming is required in [Range/Printing range] programming mode. • Channel to be deleted →Clear the range/printing range. • Channel to be recovered →Program the range/printing range.	11.3
Subtract printing *	SHIFT + 7 RANGE	——	Not programmed	Programming is required in [Range/Printing range] programming mode. [Subtract printing CH] = [Reference CH] – [subtraction CH*] * Can be replaced with [reference value (with decimal point)].	11.4
Alarm	SHIFT + 8 ALARM	CH/output type	Not programmed	Select from CH (1 to 4), Fail* or C.End (chart end). * Recorders with alarm output (option) only.	11.5
		Level	Not programmed	Up to 4 alarm points can be programmed to each channel (CH 1 to 4).	
		Alarm types	H	Applicable to CH (1 to 4) selected in CH/output type mode. H/L (absolute value high/low limits) E/F (absolute value high/low limits with standby) U/d (rate-of-change increase/decrease limits) b/S (differential high/low limits) J/k (differential high/low limits with standby)	
		Relay No.	0	Applicable to recorders with alarm output (option) Relay No. "0" to "n" can be programmed. ("0": no output), n: number of output points. For recorders without alarm output (option), the number is fixed as "0".	
		Alarm values	Not programmed	Max. 5 digits including (-) sign. Sign is not necessary when U/d, b/S or J/k is selected.	
		Measuring count	Not programmed	1 to 20, Programming required only when U/d is selected.	
		Ref. CH	Not programmed	1 to 4, Programming required only when b/S and J/k are selected.	

* Programming is required to each channel. For 1-pen type, programming is only for CH 1. The items without * mark are programming common to all channels. For "alarm", programming is required to each level of channels.

Parameters	Key operations	Programming items	Defaults	Programming ranges	Ref. page
Alarm dead band	SHIFT + ◄ °C (3 sec. or more)	———	0.1	0.1 to 9.9 (%): % programming of scale span	11.6
Periodic data printing	SHIFT + 5 DATA I	Start time	Not programmed	00:00 to 23:59	11.7
		Interval time	Not programmed	00H05* to 23H59 *Limited by chart speed.	
Engineering unit *	SHIFT + 3 UNIT	———	V	Max. 5 digits (Including numeric values, alphabetic characters, %, /, °C, °F and space) Reflected by "Range No." programmed (mV, V, °C, k)	11.8
Tag *	SHIFT + 6 A-Z	———	Not programmed	Max. 9 digits (Including numeric values, alphabetic characters, %, /, °C, °F and space)	11.9
Message	0 CLEAR + 6 A-Z (3 sec. or more)	No.	Not programmed	1 to 5, Five kinds of messages can be programmed.	11.10
		Message	Not programmed	Max. 15 digits (Including numeric values, alphabetic characters, %, /, °C, °F and space)	
Burnout *	SHIFT + ▼ % (3 sec. or more)	———	non	non, UP bUrn, doWn bUrn For channels with voltage range, burnout is disabled ("non"), even if burnout is programmed (up or down).	11.11
Passcode/ keylock	SHIFT + ▲ / (3 sec. or more)	Pass code	non	non (not programmed). For programming, use 4 digits from 0 to 9.	11.12
		Key lock	UnLoCkEd	LockEd, UnLoCkEd	
Time axis synchronization	0 CLEAR + 9 LIST (3 sec. or more)	———	oFF	on, oFF	9.6
Input filter*	0 CLEAR + 8 ALARM (3 sec. or more)	Time constant	0	0, 0 to 10 (sec.). "0" means no time constant.	11.13
Copy	SHIFT + SPACE COPY(=) (Programming in each programming mode)	———	———	Programmed parameters can be copied to other channels. Available parameters to be copied are [Range/Printing range], [Engineering unit] and [Tag].	11.14

* Programming is required to each channel. For 1-pen type, programming is only for CH 1. The items without * mark are programming common to all channels. For "alarm", programming is required to each level of channels.

3 Programming for Options

Parameters	Programming items	Key operations	Programming contents	Defaults	Programming ranges		Ref. page
Alarm output	Relay No.	SHIFT + 8 ALARM	Relay No.	0	"0" to "n" (n: 6, 12)* In alarm programming mode, program relay Nos. (terminal Nos.) for alarm output. * number of output points		12.1
	AND/ OR	0 CLEAR + ◄ °C (3 sec. or more)	AND/OR	or	AND/OR programming is required for each relay No.		
	Output mode	DISP + ◄ °C (3 sec. or more)	Relay coil	E	E (energize), d (not energize)	Common to all relay Nos.	
			Relay output	U	H (hold), U (not hold)		
			Alarm display	U	H (hold), U (not hold)		

Names	Programming items	Key operations	Programming contents	Defaults	Programming ranges	Ref. page
Remote contacts	Chart speed (3 speeds)	SHIFT + 1 CHART	Speed No.	1	1 to 3	13.3
			Speed	20/25*	0001 to 0600 mm/h or 0001 to 0200 mm/min	
	Terminal allocation	0 CLEAR + 5 DATA I (3 sec. or more)	Terminal No.	1	1 to 4	13.2
			Operation	non	Selection from 13 items; non, printing on/off & 3 kinds of chart speed, message printing (No. 1 to 2), message printing (No. 1 to 5), operation record (A/B/C/D), digital data printing, list printing (No. 1to 3) and totalizing reset	
	Operation record	0 CLEAR + 2 TAG (3 sec. or more)	Printing No.	A	A, B, C, D	13.4
			Printing position	0	10 to 90%. Printing position when the contact is open. The printing position is at +5 mm when it is shorted.	
Record format	Automatic range shift (Ar)	SHIFT + DISP	Format	Sd	Select Ar from Sd (standard), Ar, SP, and PL.	14.1
			Channel	Not programmed	1 to 4	
			Zero for range 1	Not programmed	a (Minimum value $\leq$ a < b)	
			Span for range 1	Not programmed	b (a < b < c)	
			Span for range 2	Not programmed	c (b < c < d)	
			Span for range 3	Not programmed	d (c < d < e)	
			Span for range 4	Not programmed	e (d < e < f)	
			Span for range 5	Not programmed	f (e < f $\leq$ maximum value)	
	Compressed/ Expanded (SP)	SHIFT + DISP	Format	Sd	Select SP from Sd (standard), Ar, SP, and PL.	14.2
			Channel	Not programmed	1 to 4	
			Printing position for broken point 1	Not programmed	0 to a (%)	
			Printing position for broken point 2	Not programmed	a to 100 (%)	
			Scale at zero	Not programmed	b (Minimum value $\leq$ b < c)	
			Scale for broken point 1	Not programmed	c (b < c < d)	
			Scale for broken point 2	Not programmed	d (c < d < e)	
			Scale for span	Not programmed	e (d < e $\leq$ maximum value)	
	Zone scale (PL)	SHIFT + DISP	Format	Sd	Select PL from Sd (standard), Ar, SP, and PL.	14.3
			CH for area 1	Not programmed	1 to 4	
			CH for area 2	Not programmed	1 to 4 (Except channels for area 1)	Area1 and2 only for RD200
			CH for area 3	Not programmed	1 to 4 (Except channels for area 1 and 2)	
			CH for area 4	Not programmed	1 to 4 (Except channels for area 1 to 3)	
Communications interface	Protocol	SHIFT + SPACE COPY(=) (3 sec. or more)			For details, refer to the separate instruction manual for "Communications Interface".	15.1
	Specifications	SHIFT + ♩(-) (3 sec. or more)				15.2

* RD200: 20 mm/h, RD2800: 25 mm/h

This section explains the basic programming parameters.

1 Basic of Programming Flow Chart

Programming is interrupted to return to the operation screen at any programming stage by pressing [DISP] key before storing.

Keys to be pressed depending on programming items.

This action is necessary for some programming items.

For parameters to be programmed for each channel, check the programmed parameters of other channels with [▲] or [▼].

(1) Programming lamp lights.
(2) The cursor appears at a programmable digit. Cursor

Operation screen (Measured value/clock/alarm)

[DISP]

([ ] + [ ]) 3 sec. or more

Programmed parameter check

[SET END]

Ready for programming

[Function keys]

Programming by using numeric values or parameters selection

YES — Same programming for all channels?

(Programming for each channel) NO [ENTRY]

Temporarily stored

Programming other channels? — YES → **Reference**

NO

[ENTRY] (Note)   [SHIFT] + [SET END]

Stored

Character display

Programming lamp
Memory colon
Character display (Abbreviation of a programming item)

If this procedure is omitted, programmed parameters are not stored into memory.

(Note) Common programmed parameters are stored only by pressing [ENTRY] key.

(1) Memory colon starts blinking.
(2) Programming change mark △ is printed.*
   Programmed parameter (including temporarily stored programmed parameters) are stored. During this storing operation, measurement is interrupted.
* The change mark is printed on the right side of chart paper. However the △ mark will not be printed completely until the chart paper advances several lines.

Reference **Programming same parameter to other channels**

Use [copy] function for convenient operation.
⇨ See Section 11. 14.

2 Key Operation

1) Numeric keys and cursor
- Cursor shifts rightward when pressing numeric keys ([0 CLEAR] to [9 LIST] and [— (-)]).
- Press [▶ °F] or [◀ °C] for moving the cursor.

2) How to add or delete a decimal point
- To add the decimal point move the cursor to [ ]. [ ] and press [• CLOCK]. To delete the decimal point, press [SPACE COPY(=)]. (Numeric vallue is also deleted.)

3) Clearing a displayed programmed parameter
- The programmed parameter is cleared by pressing [SHIFT] and [0 CLEAR] simultaneously.

— 3 7 —

An error for the programmed parameter is judged when pressing [ENTRY] during [Storing] or [Temporarily storing] procedures.

1 Error Judgement Flow Chart
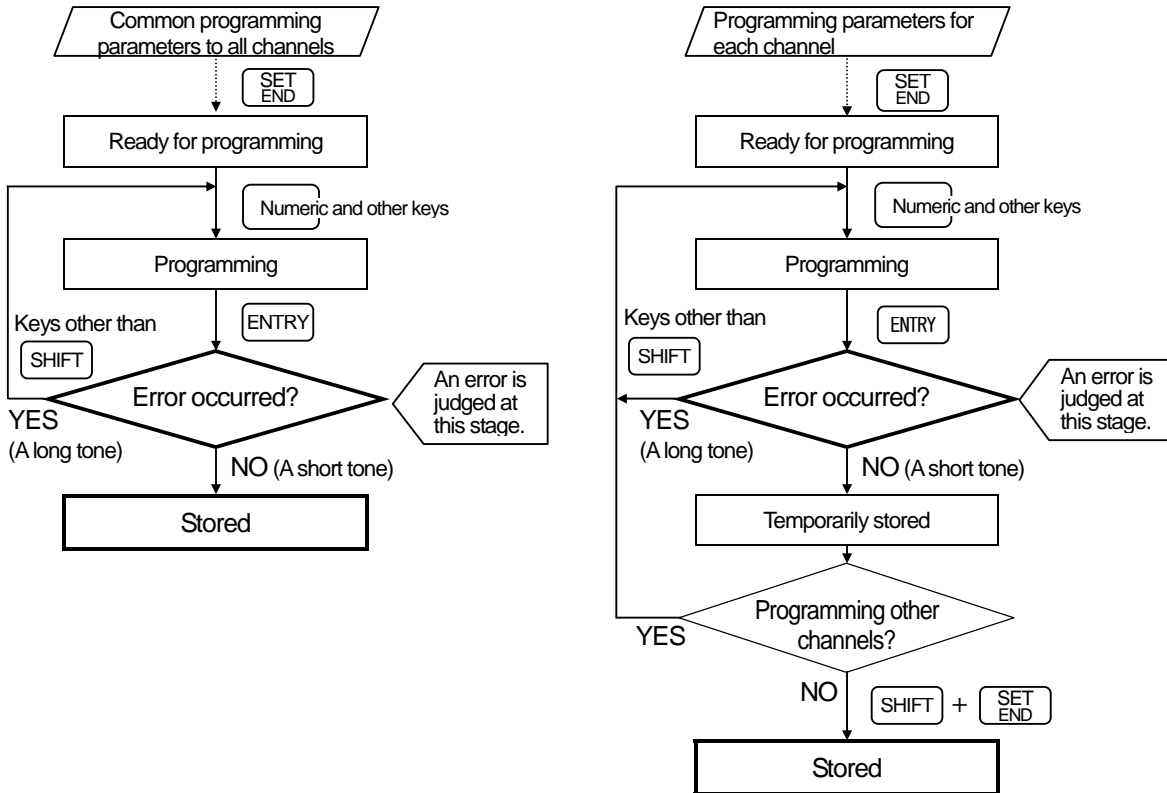

2 Type of Errors and Error Display

If a programmed parameter is in error, a long tone (approx. 0.5 sec.) sounds and no storing (or temporarily storing) is executed.

Error type	Format error	Programming error
Display	`For Error` →Blinks	`SEt Error` →Blinks
Details	Programmed parameter format is in error. [1234] was programmed to [12-34] or the like, for example.	A numeric value out of programming range was programmed.

3 Remedial measures when an error occurs

If any key other than [SHIFT] is pressed, it returns to the programmed parameter display. The cursor appears and reprogramming can be executed. Reprogram by entering correct value.

Certain parameters are to be programmed for starting operation after turning on the power supply.

1 Turning On the Power supply

By turning on the power supply for the first time, the display and printing operation start with default parameters. Perform the basic programming to match your purpose before operation.

Default parameters

Range/ Printing range	07 (±5 V)/0.000 to 5.000 (V)
°C/°F selection	°C calculation
Chart speed	RD200: 20 mm/h RD2800: 25 mm/h

2 Basic Programming Parameters

Be sure to program the following three parameters before operation.

```
Turning on the power supply
            |
            v
Programming range/printing
          range*
```
Program the following items for each channel to be used.
(1) Range No.
(2) Trace printing range
(3) Reference junction compensation (RJ): Enable or disable (only for thermocouple range)

```
       NO
      <Is thermocouple or resistance
        thermometer range used?>
            | YES
            v
   Selecting °C/°F computation
```
Select either computing unit "°C" or "°F" to measure temperature when thermocouple or resistance thermometer range is used. The default parameter is "°C".

```
   Programming chart speed
```
Default speed: RD200 is set to 20 mm/h
                RD2800 is set to 25 mm/h
Default programming range: 0001 to 0600 mm/h or
                           0001 to 0200 mm/h

```
    Basic programming end
            |
            v
   Parameters to be
programmed depending on
      functions
```
(1) Scale* (2) Skip (channel deletion and recovery) (3) Subtract printing (4) Alarms (absolute value, rate-of-change and differential) (5) Periodic data printing (6) Clock (7) Engineering unit (8) Tag (9) Burnout enable/disable (10) Pass code/Keylock (11) Alarm dead band (12) Message (13) Time axis synchronization

```
Parameters to be programmed
   depending on options
```
(1) Alarm output (2) Communications interface (Note) (3) Remote contacts (4) Printing format (automatic range shift, compressed/expanded, zone record)
(Note) Refer to the separate instruction manual for "Communications Interface".

* When the printing range is set, that value reflects to the "Scale" setting. For the scaling with voltage input, read the Section 11.2.

Program the following parameters before operation. Press [SHIFT] and [7 RANGE] simultaneously at the operation screen to display the "Range/Printing range" programming screen. Programming of the parameter is required in every channel.

1 Programming Mode and Parameters

1) Programming mode

Character display | Cursor | Channel | Range No. | RJ selection

Printing range (Max. 10 digits by left-justify)   *

| Minimum value (within 5 digits) | | to | | Maximum value (within 5 digits) |
| Value to print 0% | | [SHIFT] + [↲ (−)] | | Value to print 100% |

Character display

Programming lamp
"R" stands for "Range".

Memory colon
* Unused digits should be filled with spaces.

2) Parameters

Program the following three parameters for every channel.

Parameters	(1) Range No.	(2) RJ selection	(3) Printing range
Purpose	Selection of input types and measuring ranges	Selection of reference junction compensation (RJ) enabled or disabled	Specifying of the input range to be printed on the chart paper.
Programming values	Range No. (2-digit numeric value) For a range No. table, see item **4** .	0: Disable (external compensation) 1: Enable (internal compensation) Program to "0" for all inputs other than thermocouple input.	Minimum value to maximum value (within 5 digits) This range can be programmed irrespective of the measuring range being specified in the range No. selected. (Note)

(Note) Input exceeding the measuring range or printing range is printed as an over-range.

2 Cautions on Programming and Reference

Read the following cautions and reference items. The programming flow charts are described on the next page.

1) Minimum printing range

Read the "minimum printing range" on Section 22.1 (Input Specifications). A programming error occurs if the minimum value and the maximum value are set to the same figure.

2) Position of decimal point

The printing range reflects to the scale value. The decimal point position on actual display/printing is fixed by the range No. selected. For changing it, refer to the scale programming.

Range No. (Measuring range)	Printing range	Scale	Actual position of decimal point
07 (-5.000 to 5.000 V)	0 to 5	0 to 5	0.000 to 5.000
21 (-200.0 to 300.0℃)	0 to 200	0 to 200	0.0 to 200.0
23 (-200 to 1370℃)	0.0 to 800.0	0.0 to 800.0	0 to 800

3) When "Range/Printing range" is changed, the last scale value becomes ineffective and is replaced with the new printing range.

4) Channel for subtract printing

Different range programming procedure is required. Read Section 11.4 (Programming Subtract Printing).

5) Programming a same range to other channels

The [copy] function is useful. Read Section 11.14.

6) Scaling

Printing range reflects to the scale value. For scale programming to the channel with voltage input, read Section 11.2.

－ 4 0 －

3 Programming Flow Chart

<Example> Range No. for channel 3: 22, RJ: Enable, Printing range: -50 to 450°C

Operation screen

[DISP]

Channel 1 range.
Other channels can be checked with [↑] or [▼ %].

    (4) No.79: JIS C 1604-1981

> **Remarks** ▷ **Decimal point position and engineering units**
>
> Decimal point position: Even if the decimal point position is programmed in the printing range, the actual display/printing position is shown as described in the table above depending on the range No. For changing the decimal point position, see Section 11.2 "Scale programming".
>
> Engineering units: Engineering unit is shown as described in the table above depending on range No. (Temperature unit is fixed to "°C" except No. 47 and 80). For changing the engineering unit, see Section 11.8 "Unit programming".

This programming is to select a "°C" or "°F" computation for a temperature range (thermocouple or resistance thermometer). The default setting is "°C". Press [SHIFT] and [▶ 36] simultaneously 3 seconds or more in the operation screen to display the "°C/°F computation" selection screen. Select "°F" if necessary.

1 Programming Mode

□ dEG.Cʳ dEG.F □ _dEG.C □□□□□

[ENTRY]

Stored

The selected computation unit is stored into memory.

(Memory colon blinks and the programming change mark ⌂ is printed.)

Remarks > **Relation with other programming items**

1) In case of temperature unit "K"
The temperature unit for the range No.47 (AuFe-CR) and 80 (Pt-Co) is "K". It does not affect this programming.

2) Influence onto other programmed parameters
The programmed parameters for "Range/Printing range", "Scale" and "Alarm setpoint" are not changed automatically. If the programmed parameters cannot be used for the selected computation unit, reprogram them again. Even if "°C" or "°F" is programmed at the "Engineering unit programming", it does not change the computation.

Program the chart speed before operation.
- Press [SHIFT] and [1 CHART] simultaneously in the operation screen to display the [Chart speed] programming screen.
- For the remote contacts (option), read Section 13.3.
- 0000mm/h can be set for RD2800. When 0000mm/h is set, chart is fed at the speed of 12.5mm/h.

NO

Stored

The new programmed value is stored into memory.

Memory colon blinks and the programming change mark ⌂ is printed.

Remarks 1   **If 150 mm/h or more is programmed for the chart speed**

No printing, except time line, data printing and programming change mark, is executed.

Remarks 2   **Influence to periodic data printing**

When changing the chart speed, the programmed parameters for [periodic data printing] (Section 11.7) is cleared. (Default: Not programmed)

− 4 4 −

Printing comprises trace printing and digital printing. The fixed-time printing and trace printing are executed even if any operation is not programmed.

1 Printing Types and the Details

Printing type		Printing details	Remarks
Trace printing (Cartridge pen)		Trend printing is executed for each pen (channel) | 1st pen	2nd pen	3rd pen	4th pen
Red	Green	Blue	Brown		————
Digital Data Printing (Plotter pen)	Fixed-time printing	The following details are printed on the fixed time. (1) Year/Month/Day (2) Time (3) Time line (4) Chart speed (5) Scale, Engineering unit, Tag	10-1
	Periodic data printing	Measured values are printed on the trace printing with programmed intervals. The printing starts from the programmed start time line. The printing mode is different depending on chart speed.	11-7
	Digital data printing	Measured values are printed on the trace printing. The printing mode is different depending on chart speed.	9-2
	List 1 printing	Major parameters (Range/Printing range, Scale, Subtract printing, Periodic data printing) are printed as a table.	9-3
	List 2 printing	The parameters (such as time axis synchronizing, message, items relating to options) other than those involved in List 1 are printed as a table.	9-3
	List 3 printing	All parameters (List 1 + List 2) are printed as a table.	9-3
	Message printing	Message is printed on the right side of the chart paper by selecting the programmed message No.	9-4
	Alarm printing	Alarm details (time, alarm points, alarm type) are printed on the right side of the chart paper when an alarm activates or an alarm is reset.	10-4
	Time axis sync. mark printing	(1) When the time axis synchronization (POC) is switched on or off, its time, mark (*), and ON or OFF are printed on the right side of the chart paper. (2) When it is ON, a mark (*) is printed to the right of the time print of fixed-time printing.	9-6 10-1
	Power-on printing	Year/Month/Day and time are printed on the left side of the chart paper when the power is turned on.	6-1
	Operation printing line and Operation printing No.	For the remote contacts (option), it is required to program the "Operation printing position" and select one of Act 1 to 4 in the "Remote contacts" programming. (1) Printing line: When a contact signal (on) is applied to the allocated terminal, the line is printed by 5 mm to the right of the programmed printing line position. (2) Operation printing No.: Operation printing No. (A to D) is printed at constant intervals to the left of the programmed printing line position.	13-4
	Printer check printing	When hardware check is executed by selecting the printer (plotter pen) characters are printed for checking purpose.	19-2

2 Printing Examples

1) RD200 (Printing width: 100 mm)

4-pen type
2) RD2800 (printing width: 180 mm)

4-pen type
The measured value at the moment [DATA PRINT] pressed is digitally printed with the plotter pen.

Operation screen

[DATA PRINT] → [ENTRY]
(Note)

Digital data printing starts.

Interrupt?

YES*

[REC ON/OFF] → [ENTRY] NO

Digital data printing ends.
(Approx. 5 min. at 20 mm/h)

* With this procedure, the printing operation turns off. Press [REC ON/OFF] and [ENTRY] again to turn it on.
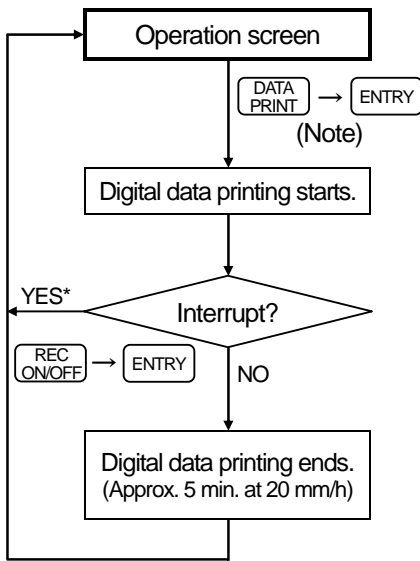

(1) Press [DATA PRINT] and then press [ENTRY]. Digital printing of measured value at the moment [DATA PRINT] pressed starts.
(Note) When [DATA PRINT] is pressed, $P U 5 H \; E n t r Y$ appears for about 5 sec. Press [ENTRY] while this message appears.
• Printing mode is different depending on the chart speed.

Chart speed	Printing mode
0 to 499mm/h	Analog printing is continued without interruption.
500 mm/h or more	Analog printing is interrupted and data printing is started.

(2) For interrupting the printing, press [REC ON/OFF] and then press [ENTRY]. Your recorder returns to the normal operation but the printing operation is turned off. For turning on the printing operation, press [REC ON/OFF] and then press [ENTRY] again.
(3) When the digital data printing completes, your recorder returns to the normal operation.

> **Remarks**　**Digital data printing cannot be executed in the following conditions.**
> (1) | RECORD ON | status lamp is not lit.
> (2) | KEY LOCK | status lamp lights.

Example of Digital data printing (4-pen type)

<99 mm/h or slower>

<100 mm/h or faster>

(Note) The above examples are for RD200. They are the same for RD2800.
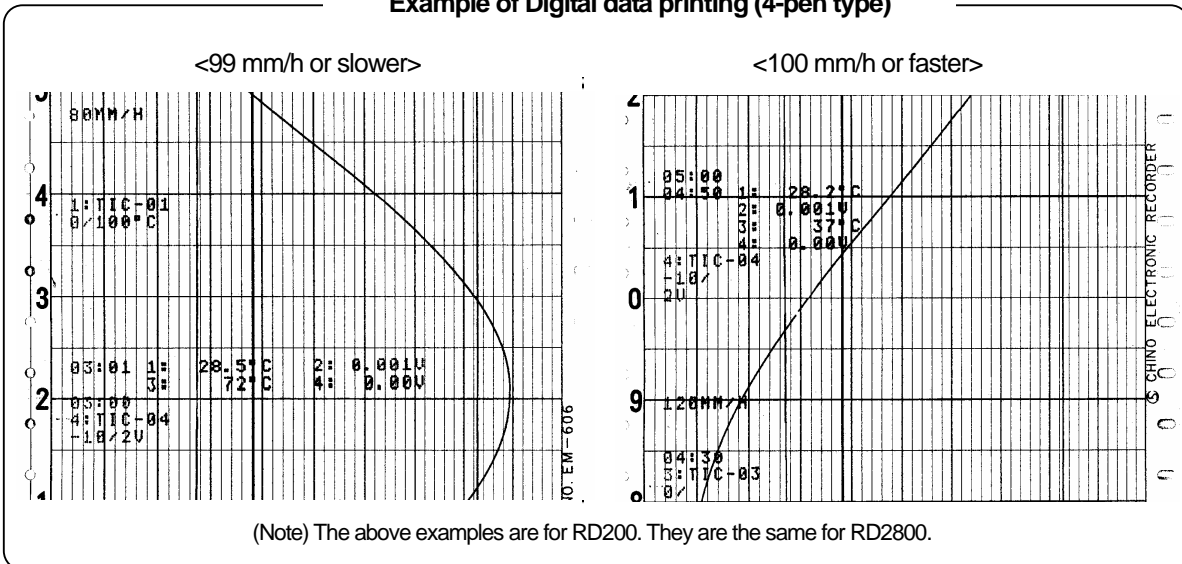

The details of programming such as "Range/Printing range" and "Scale" can be printed as a list with the plotter pen. As this includes large amount of data and takes time, it enables to divide the data into two and select printing of "List 1" or "List 2".

List 1: Major parameters …. "Range/Printing range", "Chart speed", "Printing format", etc.
List 2: Parameters other than the above …. "Message", "Time axis synchronization." and "option-related-items"
List 3: All parameters …. "List 1" + "List 2"

1 List 1 Printing
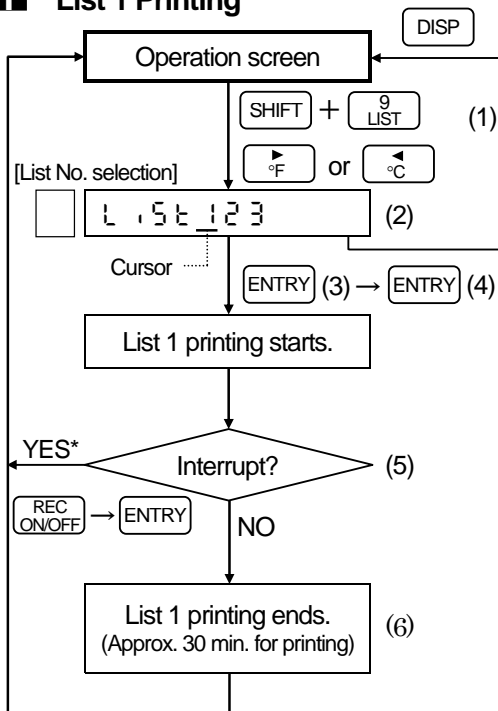

* With this procedure, the printing operation turns off. Press [REC ON/OFF] and then press [ENTRY] again to turn it on.

| Remarks | **List 1 printing cannot be executed in the following conditions.** |

(1) [RECORD ON] status lamp is not lit.
(2) [KEY LOCK] status lamp lights.
Chart speed does not affect to this operation.
Chart paper forwards at a fixed speed.

| Reference | **Operation during printing** |

(1) Trace printing with a cartridge pen is interrupted. Other functions are continued without being interrupted.
(2) Programming any parameters (Range/Printing range, Scale, Alarm, etc.) cannot be executed during printing. Program them after the printing ends.

(1) Press [SHIFT] and [9 LIST] simultaneously, and then press [ENTRY]

(2) The selection screen from [List 1] to [List 3] appears. Move the cursor to "1".

(3) When [ENTRY] is pressed, PUSH Entry appears for about 5 sec. For execution, go to procedure (4). For no execution, press [DISP].

(4) Press [ENTRY] to start "List 1" printing. The cartridge pen moves to the end of the left side and the chart paper forwards slightly.

(5) For interrupting the printing, press [REC ON/OFF] and [ENTRY] simultaneously. Your recorder returns to the normal operation but the printing operation is turned off. For turning on the printing operation, press [REC ON/OFF] and then press [ENTRY] again.

(6) When the list printing completes, your recorder returns to the normal operation.

List 1 printing details

(1) Year/month/day, Time   (2) Chart speed (Note)
(3) Range/Printing range   (4) Scale
(5) Subtract printing   (6) Periodic data printing
(7) Printing format   (8) Alarm
(Note) When the remote contacts (option), which can program 3 speeds (No.1 to No.3), is added, the presently selected speed is printed.

Example of the List 1 printing
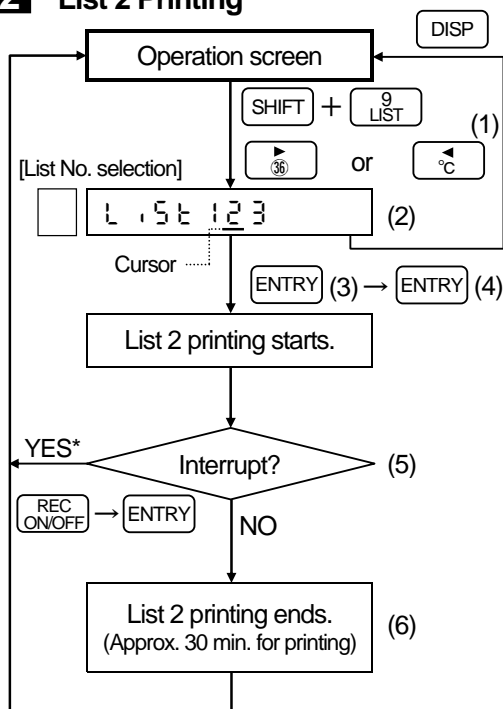

(Note) The above example is for RD200. It is the same for RD2800.

```

Message No. ⌷ENTRY⌷ (3)

Message printing starts.

YES* ◇ Interrupt? ◇ (4)

REC ON/OFF
→ ⌷ENTRY⌷

NO

Message printing ends. (5)

* With this procedure, the printing operation turns off. Press $\boxed{\substack{\text{REC} \\ \text{ON/OFF}}}$ and then press ⌷ENTRY⌷ again to turn it on.

> **Remarks** **Message printing cannot be executed in the following conditions.**
> (1) ⌷RECORD ON⌷ status lamp is not lit.
> (2) ⌷KEY LOCK⌷ status lamp lights.
> (3) For the chart speed programmed at 150 mm/h or faster

> **Reference** **Execution with external contact signal**
> When the remote contacts (option) is added, message printing can also be executed by a contact signal. However, this requires the programming of the "terminal allocation". See Section 13.2 for details.

(1) Press $\boxed{\substack{0 \\ \text{CLEAR}}}$ and $\boxed{\substack{6 \\ \text{A-Z}}}$ simultaneously for 3 seconds or more.

(2) Select the message No. (1 to 5) to be printed with $\boxed{\substack{\blacktriangle \\ /}}$ or $\boxed{\substack{\blacktriangledown \\ \%}}$.

(Note) Refer to Section 11.10 for programming of message.

(3) Press ⌷ENTRY⌷ to start "Message" printing with a plotter pen on the right side of the chart paper.

(Note) The "message" will not be printed completely until the chart paper forwards several lines.

(4) For interrupting the printing, press $\boxed{\substack{\text{REC} \\ \text{ON/OFF}}}$ and then press ⌷ENTRY⌷ . The printing operation is turned off and your recorder returns to the normal operation. For turning on the printing operation, press $\boxed{\substack{\text{REC} \\ \text{ON/OFF}}}$ and ⌷ENTRY⌷ simultaneously again.

(5) When the message printing completes, your recorder returns to the normal operation.

Example of message printing

(Note) The above example is for RD200. It is the same for RD2800.

This selection is only applicable to the printing format function (option). Four types of analog printing format are available.

1 Types of Printing Format

Before the selection, the programming of the desired format is required. See Section 14.
The default is the standard format ($5\ d$).

Types of format and programming

Types	Programming
(1) Standard ($5\ d$)	Not required
(2) Automatic range shift ($A\ r$)	Section 14.1
(3) Compressed/expanded ($5\ P$)	Section 14.2
(4) Zone ($P\ L$)	Section 14.3

2 Selection Flow Chart

<Example> From Standard printing to Zone printing
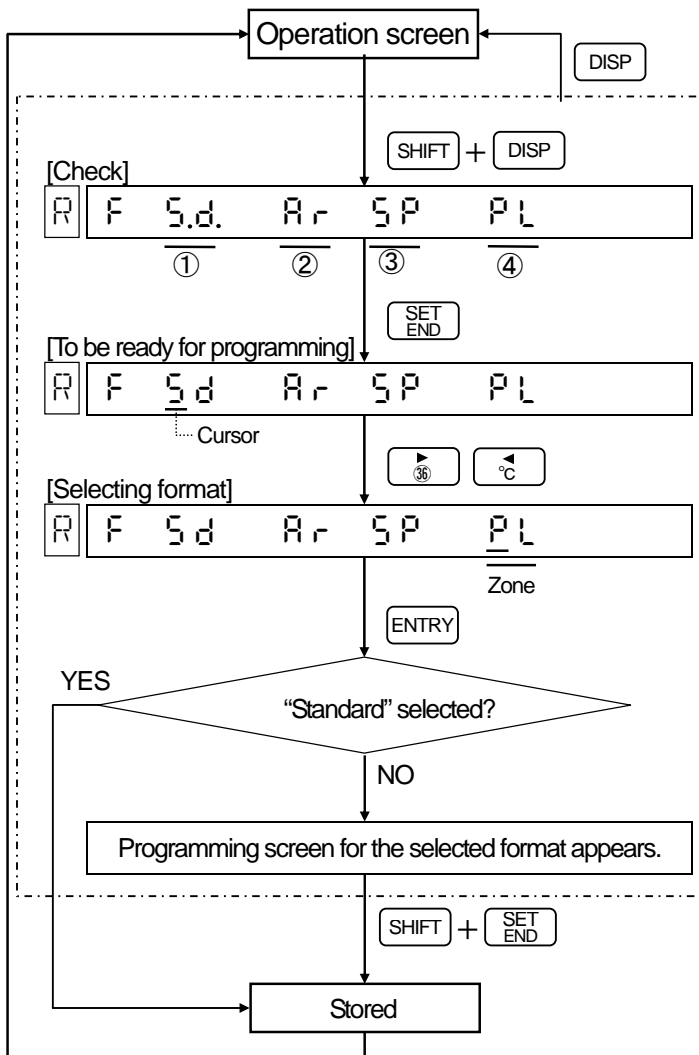

Reference 1 ▷ **Printing format check**

Decimal point appears in the current format.
(1) $5\ d$: Standard
(2) $A\ r$: Automatic range shift
(3) $5\ P$: Compressed/expanded
(4) $P\ L$: Zone

Reference 2 ▷ **Storing procedure**

1. To store the standard format;
   Press ENTRY key.
2. To store the format other than the standard:
   Press ENTRY and then press SHIFT and SET END simultaneously.

Reference 3 ▷ **Storing**

The selected format is stored into memory. The trace printing is executed in the stored format.
(Programming change mark △ is printed.)

— 5 1 —

1 Time Axis Synchronization (POC)

(1) This function is applicable to 2-pen, 3-pen and 4-pen types. In the standard printings, data at the same moment are printed on the chart paper with time axis gaps due to the difference in pen positions between 1st pen and 2nd to 4th pens. (When POC = OFF)

(2) The time axis synchronization functions to store the data of 2nd to 4th pens for the gaps and to print the stored data after the chart paper is fed to the printing start point of the 1st pen. (When POC = ON)

(3) The time axis synchronization is not available in 1-pen types.

2 Flow Chart
for Selecting Time Axis Synchronization

<Example> From time axis synchronization Off to On
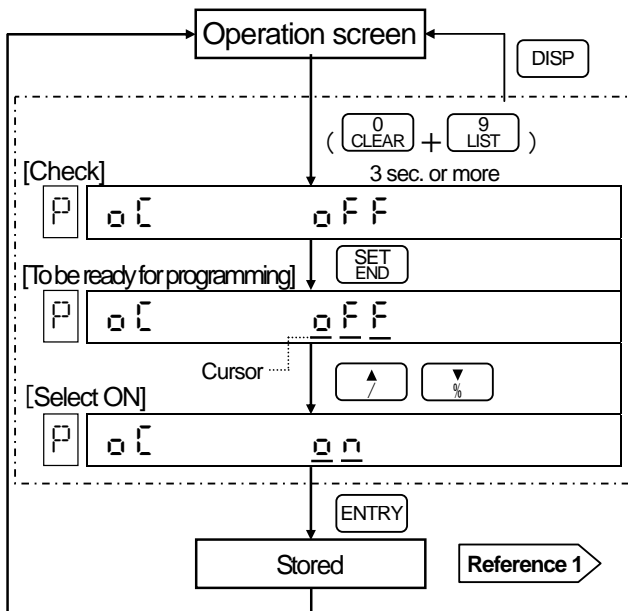

Reference 1 Storing

Selected time axis synchronization (on or off) is stored into memory. (Programming change mark ◁ is printed.)

Reference 2 Time axis synchronization. mark

A marking as shown below is printed when the time axis synchronization is switched to on or off.

```
0 9 : 2 5  ∗ ON
```

— Program changed time
— POC mark
— On or off
<Ex.> Installation positions for RD200
<Printing EX. 1> Time axis synchronization not executed
<Printing EX. 2> Time axis synchronization executed
G1: Even when the printing is off, the data for the gaps to 1st pen are stored in memory.

G2: The data for the gaps to 1st pen, which have been stored in memory in the printing off, are printed.

<Printing EX. 3> Power supply on/off

G: The data for the gaps is erased. An option to backup this data is available.

— 5 2 —

After your recorder is turned on, parameters including time, chart speed and scale are printed at specified intervals. The place of printing is in principle on the left side of the chart paper.

Printing items	Printing intervals, etc.
1. Year/Month/Day, Time	When power or printing is switched on <Ex.> 2000.10.03.14:25＊ (＊: Only when time axis synchronization is on)
2. Year/Month/Day	24-hour period (Printing every 00 hour 00 minute) <Ex.> 2000.10.04
3. Chart speed	Approx. 84 mm intervals <Ex.> 20 mm/h
4. Scale 5. Engineering unit 6. Tag (Note) (Note) For only channels being programmed	Approx. 42 mm intervals, in order of channel No. When the printing format (option) is added, the printing contents vary depending on the selected format as shown in the following examples. When the printing format is not added (standard), the printing is as shown in (1).

(1) Standard (Sd)

1:TIC1 ——————— Channel
0.0/500.0℃ ·········· Tag
                     Engineering unit
                     Scale

(2) Automatic range shift (Ar)
1: TIC1
0.0/500.0℃
((Note) In 5 ranges (R1 to R5), the range when the printing is being executed is printed as the scale.

(3) Compressed/expanded (SP)

o   +   + … ＊
o   1:TIC1
o   0.0/200.0/400.0/500.0℃
o   Zero 1st break 2nd break Span
         point   point

* The "+" mark is printed at the positions of break points 1 and 2.

(4) Zone record (PL)

o   + + …. ＊
o   1:TIC1
o   0.0/500.0℃
o

*: The "+" marking identifying zones is printed at its boundary.

| 7. Time line
8. Time | Printing of "time line" and "time" is interlocked with chart speed and is executed at the following intervals. The start point of intervals is 00:00 hours. |

Chart speed (mm/h)	Time line	Time
1 to 9	6 hours	12:00 only
10 to 15	2 hours	4 hours
16 to 30	1 hour	2 hours
31 to 60	1 hour	1 hour
61 to 119	30 minutes	1 hour
120 to 149	30 minutes	30 minutes
150 or faster	30 minutes	No printing

<Example> __   10 : 30   ＊
           ①   ②   ③

① Time line
② Time
③ POC mark (Note: Printed only when the time axis synchronization is on)

(Note) See Section 9.6 for details.

Reference > **When the chart speed is 150 mm/h or faster**

No printing is executed except time line, data and programming change mark.

1 **Over-range input**

The following table shows displays and printings for input exceeding a printing range or a measuring range.

• Measuring range:
Determined by the range No. programmed in "Range/Printing range". See Section 8.2.

• Printing range:
Trace printing range programmed in "Range/Printing range".

Definition of input

Measuring range

(1) (2) Printing range (3) (4)

区分	Input	Display		Printing	
		Digital	Bar graph	Digital	Analog
(1)	Lower than minimum measuring range*	— — — — —	□□······□□□ (All go off.)	— — — — —	Overshooting to minimum limit
(2)	Lower than minimum printing range	Normal	□□□······□□□ (All go off.)	Normal	
(3)	Higher than maximum printing range	Normal	■■■······■■■ (All light.)	Normal	Overshooting to maximum limit
(4)	Higher than maximum measuring range*	— — — — —	■■■······■■■ (All light.)	+ — — — —	

* For the digital display and printing, the measured values can be displayed and printed up to about ±10% of the span even when the values are outside the measuring range.

2 **Input Disconnection**

The display and printing, when the input is disconnected, differ depending on the "Burnout enable/disable" programming. However, for channels of a voltage (mV or V) range, the burnout function is "disable (non)" even when "Burnout Enable/Disable" is programmed. Program "Burnout enable/disable" to each channel. See Section 11.11.

Programming burnout	Display		Printing	
	Digital	Bar graph	Digital	Analog
Disable (non)	Undefined	Undefined	Undefined	Undefined
Enable - downscale (doWn bUrn)	bUrn	□□□······□□□ (All go off.)	BURN	Overshooting to minimum limit
Enable - upscale (UP bUrn)	bUrn	■■■······■■■ (All lights.)	BURN	Overshooting to maximum limit

1 Display of Alarm Activation

The alarm activation information can be checked in the operation screen.

1) Measured value display screen

<Ex.> Alarm activated at CH 1 in 3-pen type

(2)

(1)

    143.7 145.0 42.6 20H

    ALARM   RECORD ON

(Note) The above example is for RD200. It is the same for RD2800.

Display in case alarm activated

(1) ALARM status lamp lights.
(2) The measured value of the channel in alarm blinks.
(To cancel blinking)
Press ENTRY . The measured value is displayed steadily.

2) Alarm display screen

<Ex.> Alarm activated at CH 1 in 3-pen type

(2)

(1)

(3)

    A H

    ALARM   RECORD ON

(Note) The above example is for RD200. It is the same for RD2800.

Display in case of alarm activated

(1) The character display shows "A".
(2) The alarm type at the level, of which the alarm is activated, is displayed for each channel.
(3) ALARM status lamp lights.
(Note) If no alarm activates, the alarm display screen is not displayed even when DISP is pressed.

2 Alarm Activation/Reset Printing

Alarm activation and reset are printed on the right side of the chart paper.

1) Printing format when an alarm activates

$$1\ 3 : 5\ 9 \quad 1\ H\ 1$$

— Time
— Channel
— Type
— Level

Printing example of alarm activation

    60   80   100 °C

         21:26 1H1
2) Printing format when an alarm is reset

$$1\ 4 : 0\ 5 \quad 1 - 1$$

— Time
— Channel
— Hyphen
— Level

Printing example of alarm reset

    °C   21:43 1-1

11. OTHER PROGRAMMING | 11.1 Time

For programming date and time, press [SHIFT] and [CLOCK] simultaneously to display the "Clock" programming screen. The default is Japanese time.

1 Programming Mode

```
C  2000.  01.01.  00:00   □□□□□
```
Character display | Cursor Year   Month Day   Hour   Minute
                                                   └──────────┘
                                                       Time

Clock circuit

Clock data is maintained with a lithium battery. The clock keeps on working during the time that the power supply is off or if the power supply is interrupted. The service life of the battery is for eight years under the condition of eight hours operation in a day.

Reference 1 **Time display during programming**

Time display stops during programming. Press [ENTRY] to start the display again.

Reference 2 **Programming time**

The time is programmed with a 24-hour display, which means that the programming range is 00:00 to 23:59.

"Scale" programming is necessary to display a voltage input from a converter, etc. with an actual scale. However, the scale is programmed with the same characteristic scale (not linearized scale) as the voltage input. This programming is also necessary when the decimal point position is changed in thermocouple or resistance thermometer input channels. Press [SHIFT] and [4 SCALE] simultaneously in the operation screen to display the "scale" programming.

1 **Programming Scale**

This is the actual scale (physical quantity) programming for the printing range being programmed in the [Range/Printing range].

2 **Printing range will be copied**

When programming the [Range/Printing range], the printing range is copied to the programming value of the scale.

If the scale copied from the printing range is used, the decimal point positions programmed by the printing range are neglected and the measured values with decimal point positions fixed by range number are displayed. The following table shows the cautions to be observed according to the input types.

Concept of scale programming

Range No.03 (±69 mV)
Printing range: Changing the programming from "0 to 50 (mV)" to "0 to 100 (litter/min)"

	−69	0	69
Measuring range (mV)			
Printing range (mV)	0		50
Calibration	0 20 40 60 80 100		

Programmed scale
Voltage ranges	Temperature ranges
Scale programming is not required when the scale is equal to the printing range. They are copied to scale programming, but be careful with the decimal point positions for the scale. See item **3** .	Since the printing range is copied to the scale, no programming scale is necessary, but the decimal point position of the measured value is fixed by the range number. For changing the decimal places, refer to **3** .

3 **Example of Decimal Point Programming**

Voltage range					Temperature ranges			
(1) When the printing range is equal to the scale;					(1) To move the decimal point to higher digit			
Range/Printing range	Scale programming	An example of measured values	Notes		Range/Printing range	Scale programming	An example of measured values	Notes
03/0.0 to 50.0	0.0 to 50.0	5.00	1		23/0 to 1200	0.0 to 1200.0	850.0	
	0 to 50	5	2		23/0.0 to 1200.0	0.0 to 1200.0	850	1
03/0 to 50	0.0 to 50.0	5.0						

Note 1: Decimal point position of the measured value is fixed by range number when the printing range is equal to the scale.

Note 2: Decimal point positions of the programmed scale become effective because different decimal place are programmed on printing range and scale. See item (2).

(2) When the scale is programmed with a different value from the printing range.
The decimal point position of the programmed scale becomes effective.

Note 1: Decimal point position of the measured value is fixed by range number when the printing range is equal to the scale.

(2) To move the decimal point to lower digit

Range/Printing range	Scale programming	An example of measured values	Notes
25/0 to 200	0 to 200	120.0	
	0 to 200.0	120	1

Note 1: Due to the decimal point position rule. ⇒ ▨Remarks▷

▨Remarks▷ **Decimal point position rule.**

If the decimal point positions of the lower-limit and higher-limit values are different, the lower decimal point position is adopted. <Example> 0.00 to 100.0 ⇒ 0.0 to 100.0

▨Remarks▷ **For programming the same scale to the other channels;**

The [Copy] function is convenient. See Section 11.14.

4 Programming Mode

ENTRY

Error message appears? — YES → (Any key other than SHIFT)

NO ↓

Temporarily stored

Programming other channels? — YES (loops back)

NO ↓

SHIFT + SET/END

Stored   **Ref. 3**

Remarks **To clear (none) the scale programmed**

(1) Select the channel to program to "none" with ▲/↑ or ▼/% .*

(2) Press SHIFT and 0/CLEAR simultaneously to clear and execute [temporarily storing] and [storing].

* If a channel is programmed by a numeric value, not by up and down keys, and cleared, the channel before programming change is programmed to scale "none".

Note) The scale of the channel, of which scale was programmed to "none", is reflected by the printing range being programmed in the [Range/Printing range]. Tag and alarms are cleared (not programmed).

Reference 1 **Other channels check**

Press ▲/↑ or ▼/% to check the programmed scale of other channels.

Reference 2 **Various keys**

- Adding/deleting decimal point
  Move the cursor to the right:
  ·/CLOCK or SPACE/COPY(=) → Numeric keys
- Programming "to": SHIFT + ⁻ ⁄(-)
- Space: SPACE/COPY(=)

Reference 3 **Storing**

Store the [temporarily stored] parameters into the memory. (A programming change mark is printed.)

* Fill unused digits with spaces.

When "CLEAR" (non-programming condition) is stored in the [Range/Printing range] programming, printing and display of specific channels are skipped. Press [SHIFT] and [7 RANGE] in the operation screen to display the [Range/Printing range] programming screen. The default is no skip function programmed to any channel.

1 Skipping

If the skip function is programmed to the specified channel, programmed parameters of [scale], [alarm], [engineering unit] and [tag] of this channel are also cleared. Program the parameters again if the channels are restored to no-skipped status.

Operation of skipped channels

Your recorder functions assuming that these channels do not exist.
(1) Measured value: Disappear
(2) Bargraph: Disappear
(3) Data printing: Disable
(4) Trace printing: Overshooting to the minimum limit.

2 Programming Skip Flow Chart

<Example> Skipping CH 3 (3rd pen)
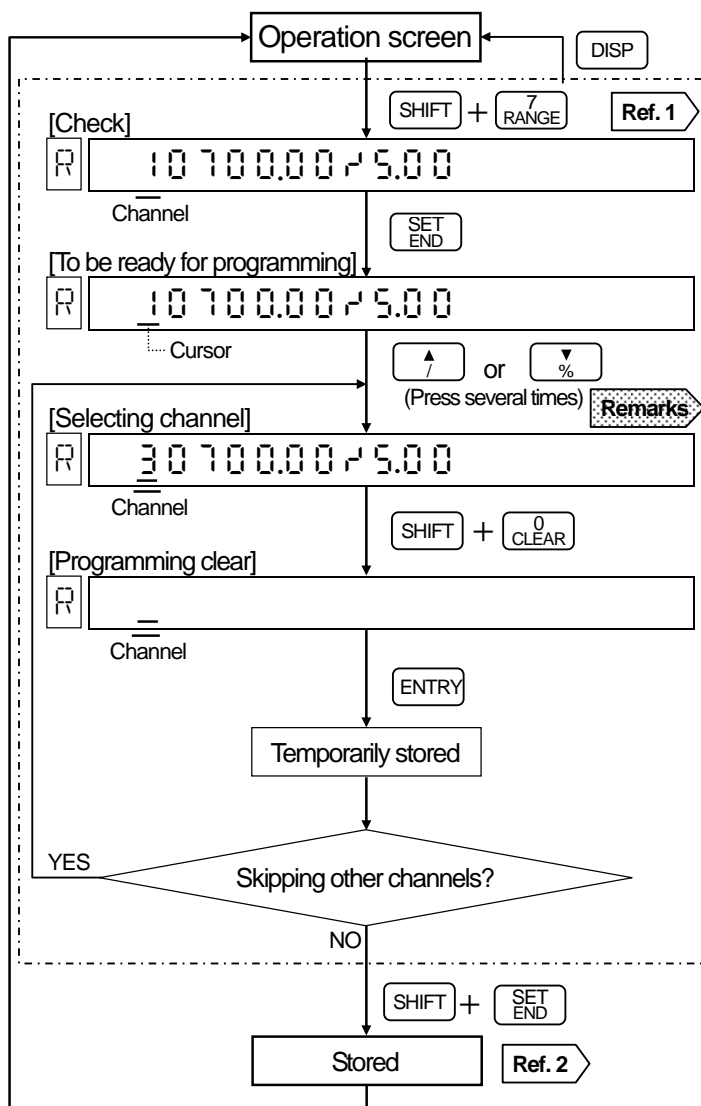

Remarks **To select channels**

Select a channel with [↑/] or [▼%]. If a channel is selected with a numeric key and the "CLEAR" is executed, the channel being displayed before changing programming ([1] in the flow chart) is deleted.

Reference 1 **Other channel check**

You can check the range programming of other channels. Press [↑/] or [▼%] to change channels. The skipped channels are not displayed.

Reference 2 **Storing**

Store the [temporarily stored] skip into the memory. (A programming change mark is printed.)

Other programming parameters

The programmed parameters of [scale], [alarm], [engineering unit] and [tag] are cleared at the skipped channels.
1) Select a computing unit in the [°C/°F computing selection] if the channels are newly programmed to temperature range.
2) Program the required [scale] if the channels are newly programmed to voltage range.
3) Program [alarm], [engineering unit] and [tag] if necessary.

Reference 1 **Skipped channel check**

You can check the range programming of other channels. Press ▲⁄ or ▼% to change channels. The skipped channels are not displayed.

Reference 2 **Starting channel**

This programming can be started at any channel. With the example flow chart, the programming starts from CH 1. As the programmed parameters of CH 1 are not changed, they are same as original parameters.

Reference 3 **Channel No. for new programming**

In the example, CH 3 is a channel to be newly programmed. If CH 3 has not been programmed as a skip channel, new range/printing range is displayed.

Reference 4 **Range/Printing range programming**

Refer to Section 8.2.

Reference 5 **Storing**

Store the [temporarily stored] parameters into the memory. (A programming change mark is printed.)

* Fill used digits with spaces.

This programming is for printing a difference between channels or between a channel and a reference value.
Press [SHIFT] and [7 RANGE] simultaneously to display the [Range/Printing range] programming screen to program the subtract printing.

1 Subtract Printing Types

Two types of subtract printings are provided.
(1) Printing a difference between a reference channel and a subtraction channel
(2) Printing a difference between a reference channel and a specified subtraction value (reference value).

Remarks 1 **Programming reference channel and subtraction channel**
Be sure to program [Range/Printing range] of both the reference channel and the subtraction channel in advance.

Remarks 2 **Place a decimal point to the reference value**
Program the reference value with the scale programmed value within 5 digits. For identifying the reference value to a channel No., be sure to place a decimal point to the reference value having no decimal point.
<Ex. 2 → 2.0>

Subtract printing channel

Subtract printing can be specified to any channel. For example, [CH 1 minus CH 2] can be specified to [CH 2]. In this case, the difference between channels are displayed and printed at CH 2.

Concept of subtract printing

<Example> Printing the difference between CH 1 and CH 2 at CH 3

CH 1   0   300   500℃
CH 2   0   200   500℃
CH 3   −250   100   250℃

Press ↗ or % to change channels..

Reference 2 **Programming reference channel and subtraction channel**

If a specified value (reference value) is programmed instead of the subtraction channel in the flow chart, the difference with the reference value will be printed. Add a decimal point to the reference value.

Reference 3 **Various keys**

- Programming "to": SHIFT + ↗(-)
- Decimal point: CLOCK in the next digit
- Deletion of decimal point: SPACE COPY(=) in the next digit

Reference 3 **Storing**

Store the [temporarily stored] parameters into the memory. (A programming change mark is printed.)

* Fill unused digits with spaces.

Alarm parameters (alarm types, alarm value, etc.) can be programmed for each alarm point (channel, level). By programming the alarm parameters, alarm activation can be displayed and also the activation and reset can be printed. See Section 10.3. Press [SHIFT] and [8 ALARM] simultaneously to display the [Alarm] programming screen. Alarm output is an option. The alarm outputs for "FAiL (failure) " and "C. End (chart paper end)" are available in addition to measured values.

1 Alarm Parameters

The default is no alarm programmed.

1) Alarm points (Channel, level)

Alarm point can be programmed up to level 4 for each channel. "FAiL" and "C. End" can be programmed instead of the channels.

FAiL…Alarm when the hardware except servo-circuit/mechanism is abnormal
In this condition, the status lamp is not lit.

C. End…Alarm at just before when the chart paper ends.

2) Alarm types

10 different alarm types can be selected for each alarm point.

Absolute value	H : High alarm	L : Low alarm
	E : High alarm with standby	F : Low alarm with standby
Rate-of-change	U : Increase limit	d : Decrease limit
Differential	b : Differential high alarm	5 : Differential low alarm
	J : Differential high alarm with standby	h : Differential low alarm with standby

3) Alarm value

Value for alarm activation

4) Others

Rate-of-change alarm: Program measuring count (1 to 20)
Differential alarm: Program channels to be compared.

Relations between alarm parameters and alarm activation
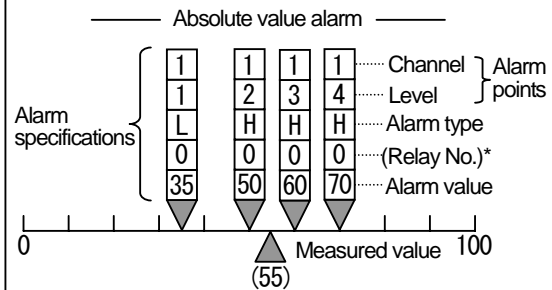

(1) The above figure shows programming alarm point up to level 4 on CH 1.
(2) Alarm is in active at level 2 (high alarm) as the measured value (55) is higher than the alarm value (50).

*No alarm output is provided to the standard specifications and the relay No. is fixed to "0". Refer to Section 12.2 for the programming of relay No.

2 Alarm Types

The high alarm for the absolute value activates when the measured value equals to or is higher than the alarm value. The low alarm activates when the measured value equals to or is lower than the alarm value.
For the rate-of-change alarm and the differential alarm, refer to the followings.

Rate-of-change alarm

Increase limit alarm: Change width (PV2 to PV1) per unit time (Δt) is plus.
Decrease limit alarm: Change width (PV2 to PV1) per unit time (Δt) is minus.

Unit time (Δt) = Measuring interval (about 0.1 sec.) x Measuring count (1 to 20)

* Do not apply a "minus" symbol to the alarm value of the decrease limit alarm (d).

Alarm with standby

This is the function not to activate an alarm until the alarm becomes in reset condition, even if the alarm is in active condition. This function is only available when the power supply is turned on. When changing parameters, this function is only available by reprogramming it after clearing once.

Differential alarm

Difference of measured value (absolute value) equals to or is higher than alarm value: Differential high alarm activation
Difference of measured value (absolute value) equals to or is lower than alarm value: Differential low alarm activation

— 6 3 —
3 Programming Mode

1) Absolute value alarms (H, L, E, F)

```
| A |   | 1 | 1H |   | 0 | 5 | 0.0 |   |   |   |   |   |   |   |   |

To delete alarm point

Follow the [Programming alarm point] procedure and select the alarm point to be deleted with [▲ /].
Clear it by pressing [SHIFT] and [0 CLEAR] simultaneously and perform [temporarily stored] and [stored] operation.

Reference 1 Output check

The relay Nos. in alarm output are displayed. This will be blank unless all of the relays are operated.

Reference 2 Other alarm point check

By pressing [▲ /], the level advances from 1 to 4 and the channel advances to the next channel and then the level of the next channel advances. Press [▼ %] for reverse operation.

Reference 3 Programming alarm point

1. Channel can be selected also with [▲ /] or [▼ %].
2. Channel advances by pressing [▲ /] Then "FaiL" and "C.End" appear. If these functions are selected, program relay Nos. only.

Reference 4 Relay No.

This is for specifying terminal Nos. for alarm output.
The relay No. for AH is displayed with 2 digits such as "0.0". See Section 12.2.When programming "1" to "9", two entering methods of 1 to 9 or 01 to 09 are available. (: space)

Reference 5 Cursor appears only for rate-of-change alarm.
Programming range is 1 to 20.

Reference 6 Cursor appears only for differential alarm.
Reference channel to be compared is programmed in 1 to 4. (The differential alarm cannot be selected in a 1-pen type recorder because no channel to be compared is existed.)

Reference 7 Storing

Store the [temporarily stored] programmed values into the memory. (A programming change mark is printed.)

11. OTHER PROGRAMMING | 11.6 Alarm Deadband

A deadband can be programmed between alarm-activation and alarm-reset.
Press [SHIFT] and [°C] simultaneously in the operation screen for 3 seconds or more to display the [Alarm deadband] programming screen. This programming is common to all alarm points.

1 **Alarm Deadband**

- An alarm activates when a measured value exceeds the alarm value. The alarm reset is executed at a value that is lower than the alarm value. This difference is called the deadband and is specified with a scale width (%).
- The programming range is 0.1 to 9.9% and can be programmed in 0.1% increments. The default is 0.1%.
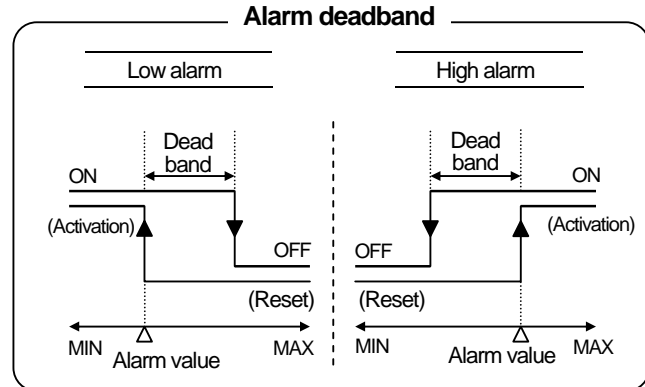

Alarm deadband

Low alarm	High alarm

ON — Dead band — OFF
(Activation) — (Reset)

    [ENTRY]

  YES   ◇ Error message appears?
Any key other than [SHIFT]   NO
               Stored
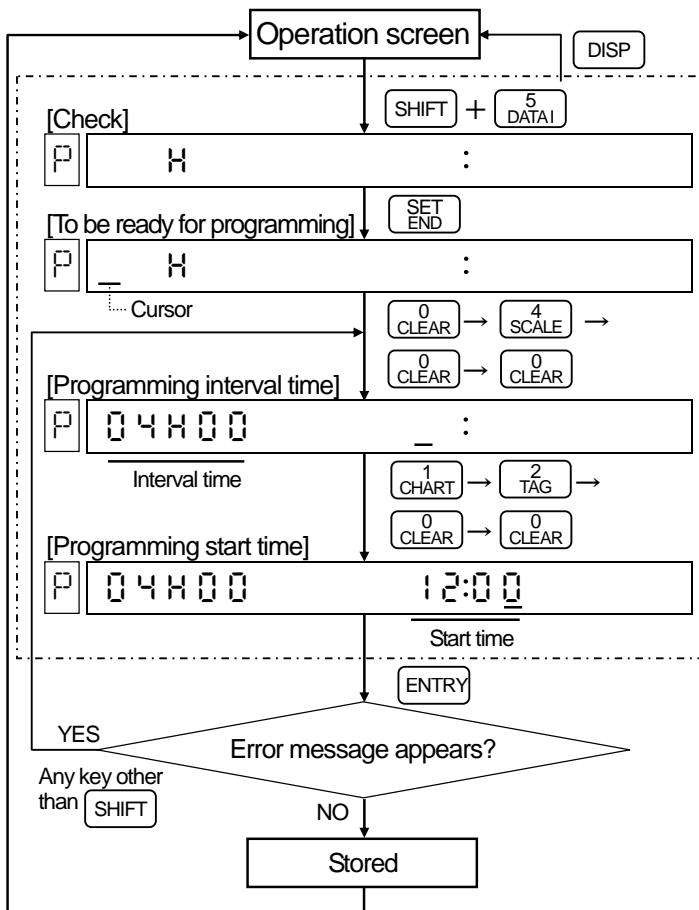

Remarks 1   **Shortest time of interval time (T)**

It depends on the chart speed and number of printing lines.

$$T\ (\text{Min.}) \geqq \frac{180 \times \text{number of printing lines}^*}{\text{Chart speed}^{*1}}$$

(Note) However, T is 5 minutes or more.
*1: When 3-speed is programmed by the remote contacts (option), the slowest speed is applied.
*2: Depending on the chart speed and number of channels.

Chart speed	CH1	CH2	CH3	CH4
99 mm/h or slower	1 line		2 lines	
100 mm/h or faster	1 line	2 lines	3 lines	4 lines

Remarks 2   **To program periodic data printing to "none"**

Press [SHIFT] and [0 CLEAR] simultaneously to clear and carry out [store].

Remarks 3   **When the chart speed is changed;**

The programmed values in the [Periodic data printing] are cleared and the periodic data printing stops. Reprogram it if necessary.

Remarks 4   **From power off to on**

In case electric power failure occurs and the power is turned on in the following day, reprogramming is required if $\frac{24}{T}$ is not an integer. (T: Interval time)

Engineering units up to 5 digits can be assigned for digital data printing and scale printing.
Press [SHIFT] and [3 UNIT] simultaneously to display [Engineering unit] programming screen.

Examples of engineering unit printing

(Digital data printing)	(Scale printing)	(List printing)

1 In case no engineering unit is programmed;

An engineering unit is decided by the range number programmed in the [Range/Printing range] programming.

Voltage range		Temperature range	
mV (01 to 05)	V (06 to 10)	°C (Nos. other than ones shown on the right)	K (47, 80)

2 Programming Mode

Engineering unit character *1

UCH (Fixed)

Cursor

Channel

1 2 3 4 5

Digit No. of engineering unit character *2
(Up to 5 digits.)

(Numeric numbers (1 to 5) appear for the digit not programmed by pressing [► °F].)

*1: Engineering unit character
The character at the digit where the digit number is pointed by the cursor is displayed.

*2: Digit No. of engineering unit character
A digit No. 1 to 5 is displayed by pressing [► °F].

<To decrease the digit No.>
Press [SHIFT] and [0 CLEAR] simultaneously to clear the digit No. and press [► °F] for reprogramming a new digit No.

If the range No. is changed;
A programmed engineering unit is deleted and the engineering unit determined by the range No. is displayed

If clear is stored at scale programming;
If the scale is cleared in a channel; the engineering unit of this channel is deleted, and it becomes the engineering unit determined by range No.

Reference 3 > **Storing**

Store the [temporarily stored] parameters into the memory. (A programming change mark is printed.)

The channel where the temperature range is programmed becomes effective. Press [SHIFT] and [▼%] simultaneously in the operation screen for 3 seconds or more to display the [Burnout] programming screen. This programming is necessary for each channel.

1 Burnout

- If a sensor (thermocouple or resistance thermometer) is disconnected, trace printing overshoots maximum or minimum limit.
- The default parameter of burnout is "disable" (ⁿₒⁿ) in all channels.

Burnout selection menu

Burnout can be selected for each channel out of 3 types shown below.

ⁿₒⁿ (Non)   : Burnout disable
UP   bUrⁿ (UP burn)   : Up scale burnout
doYⁿ bUrⁿ (down burn)   : Down scale burnout

2 Programmed Flow Chart

<Example> From burnout "disable" to "up scale burnout"
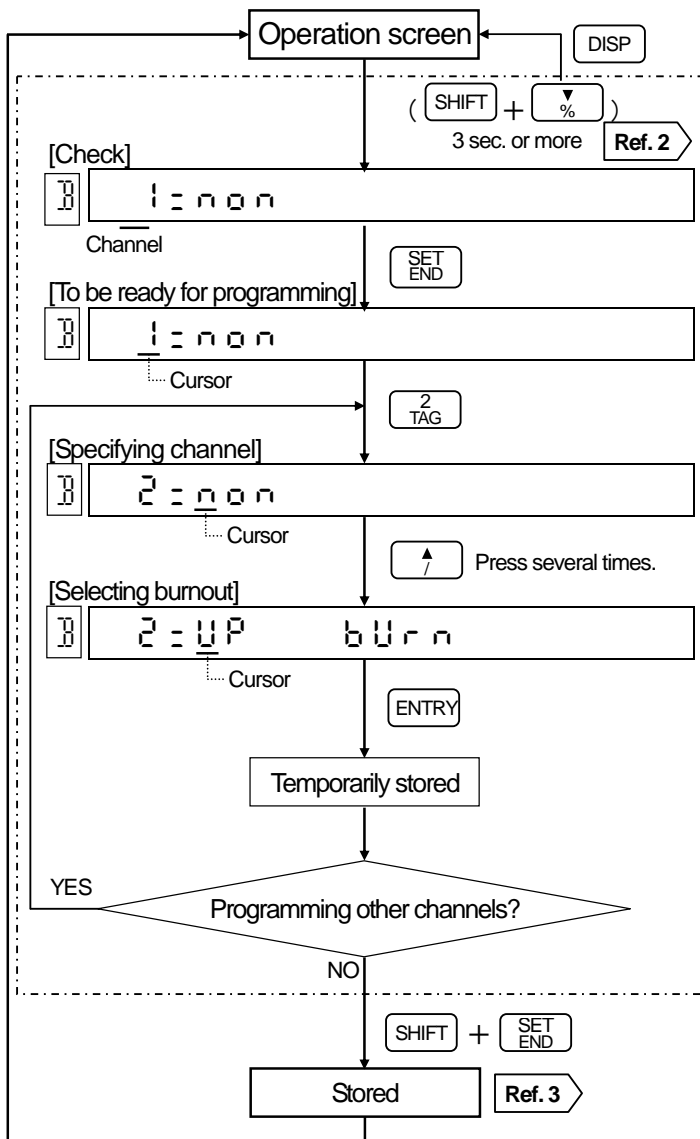

Remarks 1 "ⁿₒⁿ" programming on parallel operation

A parallel connection of a thermocouple with other instrument causes a problem. Select (ⁿₒⁿ) if your recorder uses the thermocouple being connected with other instrument.

Remarks 2 Voltage range is ineffective

Even if the burnout is programmed to a channel where the voltage range (No. 01 to 07) is programmed, this programming becomes ineffective (burnout disable).

Reference 1 Burnout operation

For the burnout operation (display and printing), read Section 10.2.

Reference 2 Other channels check

Press [▲/] or [▼%] to change channels. The programmed burnout of other channels can be checked.

Reference 3 Storing

Store the [temporarily stored] parameters into memory. (Programming change mark is printed.)

The procedure for [Key lock] programming differs depending on whether a passcode is programmed or not.

Press [SHIFT] and [↑] simultaneously in the operation screen for 3 seconds or more to display the [Passcode programmed/not programmed] check screen. If a passcode has been already programmed, it is not allowed to go to the [Key lock] programming screen unless entering the correct passcode.

1 Passcode

- [Key lock] programming cannot be allowed unless entering the correct passcode.
- As the default is no passcode programmed, you can program [Key lock].

Passcode programming range

Program a passcode with a 4-digit numeric value.
Programming range: 0001 to 9999
If "0000" is programmed, a programming error occurs.

Remarks **Keep your passcode in mind**

Keep the passcode programmed in mind or somewhere safe. If you lose the passcode, no [Key lock] operation will be available.

2 Key Lock

When [Key lock] is programmed to "LOCKED", no key operation for the following functions is accepted.
(1) Reprogramming of various parameters
(2) Operations (printing ON/OFF, chart paper feeding, digital data printing, printing format selection, and time axis synchronization selection)
The following operations are exceptional.
(1) Checking various parameters
(2) Programming the key lock to be ineffective (UNLOCKED)
(3) Selection of operation screens

Reference **In key lock**

The status KEY LOCK (blue) lights when the key lock is effective.

3 Programming Flow Chart

The flow differs depending on whether a passocde is programmed or not. See next page for details.
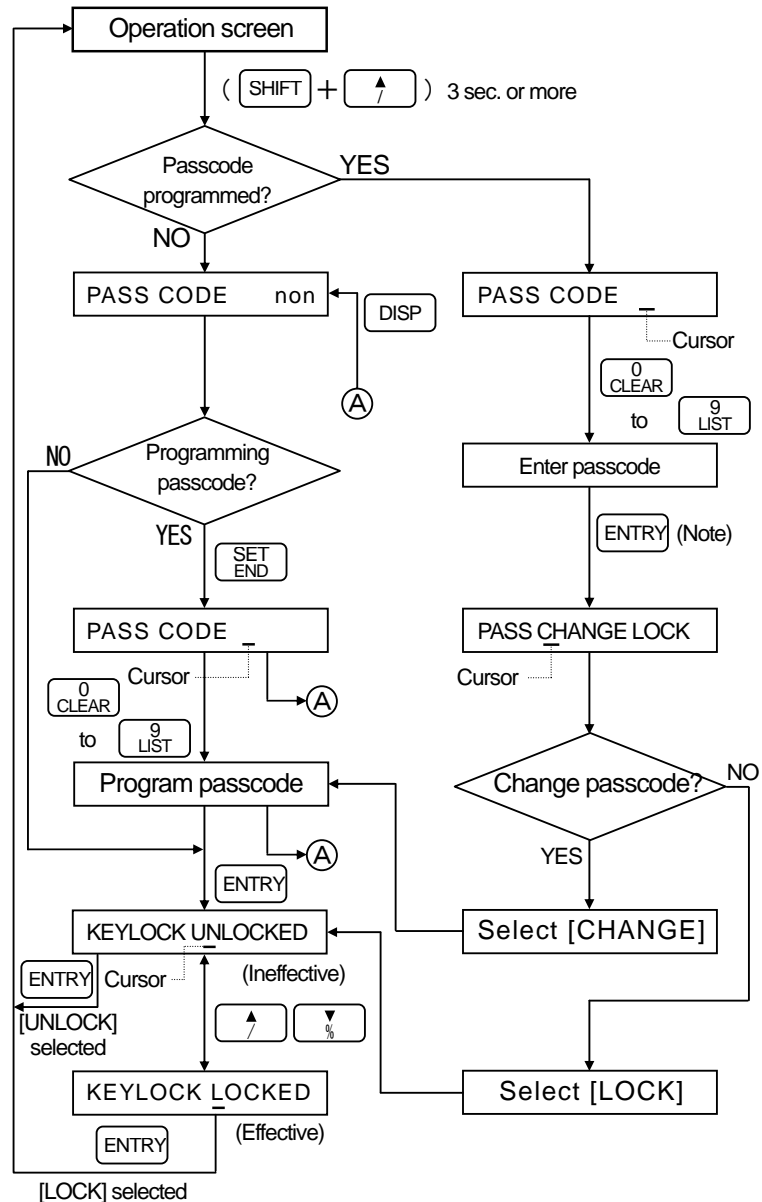

(Note) In case an error message appears, press any key other than [SHIFT] and reprogram.

12. ALARM OUTPUT | 12.1 Alarm Output Programming Items

This explanation is only for the alarm output (option). The alarm output programming is necessary after programming the "alarm".

1 Programming Items for Alarm Output

1) Relay No.	Setting of the relay No. where the alarm information (activation/reset) of each alarm point is to be output. Set them to each alarm point.
2) Output wiring	Setting to AND or OR for each relay No.. When one relay is used by multiple alarm points, you can select AND or OR for the output wiring.
3) Output mode	(1) Relay coil phase: Setting whether N and O terminals are shorted (Energized) or opened (Non-energized) when an alarm activates.
	(2) Relay output latch: Setting whether the alarm status is to be continued until ⏎ENTRY⏎ is pressed (Hold) even if the alarm becomes reset condition, or it is reset (Not hold) at the same time as resetting of the alarm.
	(3) Alarm display* latch: Setting whether the alarm display is kept displayed until ⏎ENTRY⏎ is pressed (Hold) even if the alarm becomes reset condition or turned off (Not hold) at the same time as resetting of the alarm. * Alarm display: ⎡ALARM⎤ status lamp

2 Details of Programming Items

1) Relay No. and default values

Alarm *			
Alarm point		Alarm type	Relay No.
CH 1	Level 1		0
	Level 2		0
	Level 3		0
	Level 4		0
CH 2 (2 to 4-pen types only)	Level 1		0
	Level 2		0
	Level 3		0
	Level 4		0
CH 3 (3 and 4-pen types only)	Level 1		0
	Level 2		0
	Level 3		0
	Level 4		0
CH 4 (4-pen type only)	Level 1		0
	Level 2		0
	Level 3		0
	Level 4		0
FAiL			0
C. End			0

*This is the "Alarm" programming. The relay No. is fixed at 0 in the standard specifications (AH is fixed at 00). 1 to n (Note) should be set only when alarm output (option) is added. (0 means no output.)

(Note) n: 6 or 12 depending on the number of output points.
RD200: 6 only

2) AND/OR, output mode and default values

Relay No.	AND/ OR	Output Mode		
		Relay coil phase	Relay output latch	Alarm display latch
RLy1	or			
RLy2	or			
RLy3	or			
RLy4	or	Energized	Not hold	Not hold
RLy5	or			
RLy6	or	(Common to all relays)	(Common to all relays)	(Common to all displays)
RLy7	or			
RLy8	or			
RLy9	or			
RLy10	or			
RLy11	or			
RLy12	or			

* RD200: Relay No. is 1 to 6.
RD2800: it is variable depending on the number of output points (Rel;ay No. is 1 to 12 for 12-point outputs.).

This explanation is only for the alarm output (option). Program the relay No. for each alarm point by referring the "Programming relay No." screen in "Section 11.5 Alarm, **4** Programming flow chart, 2) With alarm output (option)".

1 Alarm Output Terminals and the Status

When an alarm is in active at an alarm point, the relay No. (alarm output terminal No.) specified for the point is activated.*

*The terminal activation differs depending on the programming of the relay coil to "Energize" or "Non energize". ⇒ See Section 12.4.

Alarm outputs terminals

<MOS relay> <Mechanical relay "a" contact>	<Mechanical relay "c" contact>
	⊗ N. O
⊗ N. O	⊗ COM
⊗ COM	⊗ N. C
---
2 Programming Relay No.

For programming [Relay No.], refer to the programming flow chart in "Section 11.5 Alarm, **4** Programming flow chart, 2) With alarm output (option)". The default is "0" and no alarm output is available. Select an alarm type and press ⌊ ▶ 36 ⌋. The cursor moves to the relay No. to specify relay Nos. for each alarm point.

[Programming alarm point]
```
A    1  2H  0
```
Channel └ Level

[Selecting alarm type]
```
A    1  2L _ 0
```
Alarm type

[Programming relay No.]
```
A    1  2L  3_
```
Relay No.

[Programming alarm value]
```
A    1  2L  3350.0_
```
Alarm value
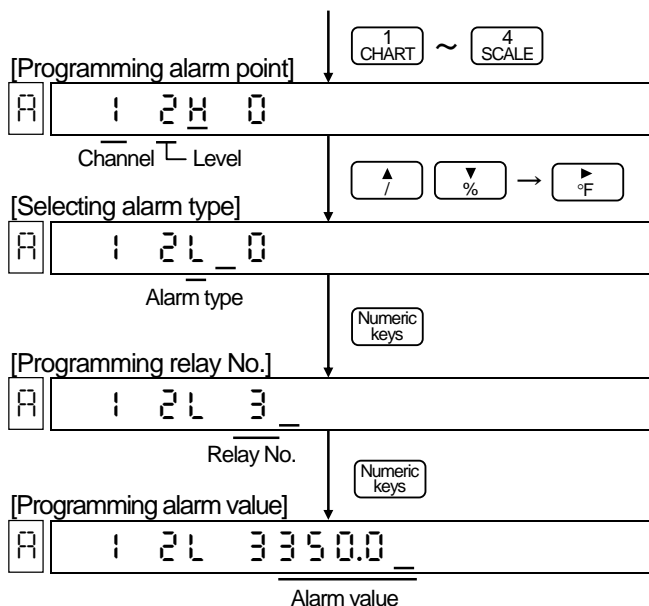

Number of relay No. digits

Each relay No. is composed of two digits. For relay Nos. 0 to 9, set ☐ 9 or 0 9 .

Select an alarm type and press ⌊ ▶ °F ⌋ to move the cursor to the relay No. screen. No output is available when the relay No. is programmed to "0". The relay No. for AH is displayed as "00".

Program a relay No. from "0" to "n". The example is for programming to "3". Program "0" if no output is necessary.

The programming after this step or before the alarm type selection, refer to the flow chart in Section 11.5. **4** 2).

Remarks 1 > **Number of alarm point and number of output point (n)**

The total numbers of alarm points are number of channels x number of levels (4) + 2 (FAiL and C. End). Number of output points is 6 or 12 points. (RD200: 6 points only)

Remarks 2 > **FAiL, C. End**

Place the cursor to the column of channel in "Selecting alarm type" and press ⌊ ▲ / ⌋ until "FaiL" or "C. End" is displayed. In this condition, select a relay No. to output when the corresponding phenomenon occurs.

This explanation is only for the alarm output (option).   Press $\boxed{\overset{0}{\text{CLEAR}}}$ and $\boxed{\overset{\blacktriangleleft}{\,_\circ\text{C}}}$ simultaneously for 3 seconds or more to display the "Output Wiring (AND or OR)" programming screen. Program it for each relay No. The default is "OR" for all relay Nos.

1 AND/OR

Multiple alarm points can be allocated to one relay No.

- AND output: The relay turns on when all alarm points allocated are in active.
- OR output: The relay turns on when any of the alarm points allocated is in active.

Alarm point 1
Alarm points 2
AND output
OR output

Store the [temporarily stored] parameters into memory. (Programming change mark is printed.)

— 8 3 —

This explanation is only for the alarm output (option). Press [DISP] and [◄ ℃] simultaneously for 3 seconds or more to display the "Output mode" programming screen. Two output modes, 1) relay coil (energize/not energize), 2) latched alarm display/relay (hold/not hold), are available. The programming is common to all relay Nos..

1 Relay Coil Energize/Not energize

The default is "Energize".
The terminal configuration differs depending on the type of relay.

1) MOS relay and mechanical relay "a" contact alarm output

Phase	Power off	Alarm reset	Alarm activation
Energized (E)	N. O / COM	N. O / COM	N. O / COM
Not energize (d)	N. O / COM	N. O / COM	N. O / COM

2) Mechanical relay "c" contact alarm output

Phase	Power off	Alarm reset	Alarm activation
Energize (E)	N. O / COM / N. C	N. O / COM / N. C	N. O / COM / N. C
Not energize (d)	N. O / COM / N. C	N. O / COM / N. C	N. O / COM / N. C

2 Latched Alarm Display/Relay (Hold/Not hold)

The default is "Not hold".
The alarm display refers to the blinking of the measured value and the lighting of ALARM status lamp.

1) Not hold （Ц）

The output is not affected by ENTRY .

Alarm activation ······
Alarm reset

Measured value blinking ······
Measured value lighting

Alarm lighting ······
Alarm not lighting

Relay output on ······
Relay output off
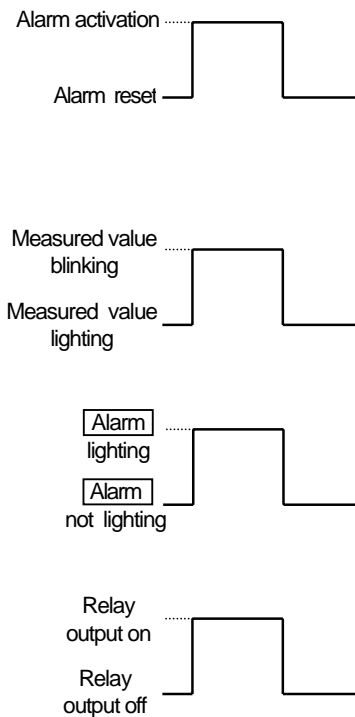

2) Hold （H）

The output is held until ENTRY is pressed. The output differs depending on the timing of pressing ENTRY .

Alarm activation ······
Alarm reset

ENTRY ▼

Measured value blinking ······
Measured value lighting

Alarm lit ······
Alarm not lighting

Relay output on ······
Relay output off

Alarm activation ······
Alarm reset

ENTRY ▼

Measured value blinking ······
Measured value lighting

Alarm lit ······
Alarm not lighting

Relay output on ······
Relay output off
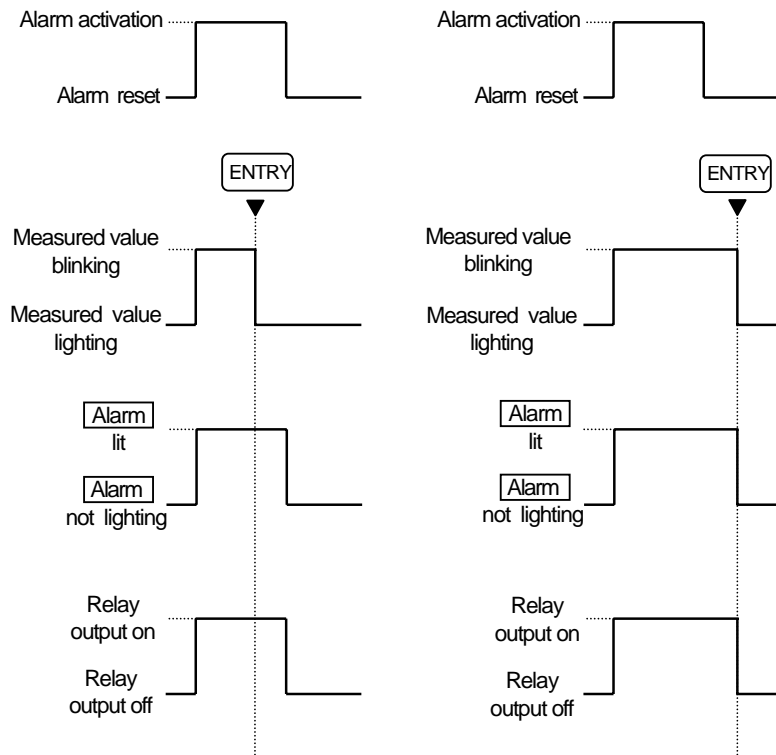

Reference ⟩ **Blinking of measured value**

The measured value blinks when an alarm activates and lights steadily when it is reset.
However, the blinking is continued when the alarm display/relay is hold.
The blinking is turned to steadily light by pressing ENTRY regardless of the programming of "Hold" or "Not hold".

13. REMOTE CONTACTS | 13.1 Remote Contacts Function

This explanation is only for the remote contacts (option).

1 Remote Contacts

(1) The following functions are available with the contact signals at remote contacts terminals (EX1 to 4). However, the functions are limited due to four terminals (EX1 to 4) provided. Moreover, some functions are automatically allocated to a certain terminal Nos.

(2) Programming to allocate the functions to terminal Nos. is necessary.

Remote contacts terminals

EX1 EX2 EX3 EX4   COM
Functions	Terminals	Remarks
(1) Printing on/off and selection of three chart speeds	2 terminals (EX1, EX2)	Programming 3 speeds, See Section 13.3. (Note 1)
(2) Execution of message printing (No.1 to 5)	4 terminals (EX1 to EX4)	Programming message, See Section 11.10. (Note 2)
(3) Execution of message printing (No.1 and 2)	2 terminals (EX1, EX2)	Programming message, See Section 11.10. (Note 3)
(4) Execution of digital data printing	Any 1 terminal	
(5) Execution of list printing (list 1, 2, 3)	Any 3 terminals	
(6) Execution of operation record (No.A to D)	Any 4 terminals	Programming operation record, See Section 13.4.
(7) Reset of totallization	Any 1 terminal	Available in totalization (option)

(Note 1) Free terminals left are EX3 and EX4.

(Note 2) No free terminals are left.

(Note 3) Free terminals left are EX3 and EX4.

2 Functions and Terminal Contact Signals
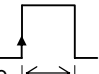

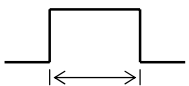

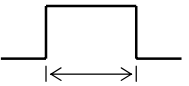

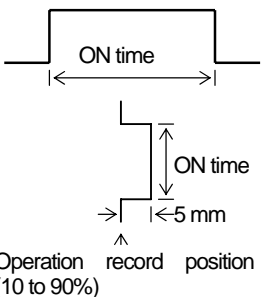

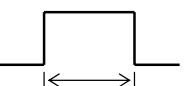

ON: Short   OFF: Open

Functions	Contact signal at terminal		
(1) Printing on/off and selection of 3 chart speeds	• Program 3 chart speeds first. See Section 13.3.		

Printing on/off and selection of 3 hart speeds		With COM	
		EX1	EX2
Printing: On	CS1	OFF	OFF
	CS2	ON	OFF
	CS3	OFF	ON
Printing: Off		ON	ON

(Note) Program "Printing on/off" to on with a key operation in advance.

• Program messages first. See Section 11.10.

Message	With COM			
	EX1	EX2	EX3	EX4*
No.1	OFF	OFF	OFF	For trigger
No.2	ON	OFF	OFF	
No.3	OFF	ON	OFF	
No.4	ON	ON	OFF	
No.5	OFF	OFF	ON	1 sec. or more

(2) Execution of message printing (No. 1 to 5)

* When the trigger signals is sent (for 1 sec. or more) after selecting the message No., the printing of programmed message starts.

(Note) Program "Printing on/off" to on with a key operation in advance. Execution of message printing with key operation is also available. See Section 9.4.

ON: Short   OFF: Open

Functions	Contact signal at terminal
(3) Execution of message printing (No.1 and 2)	• Program messages first. See Section 11.10. | Message	COM	
	EX1	EX2*
No.1	OFF	For trigger
No.2	ON	1 sec. or more	 * When the trigger signals is sent (for 1 sec. or more) after selecting the message No., the printing of programmed message starts. (Note) Program "Printing on/off" to on with a key operation in advance. Execution of message printing with key operation is also available. See section 9.4.
(4) Execution of digital data printing	Turn on (for 1 second or more) the terminal No. which the digital data printing is allocated. (Note 1) Program "Printing on/off" to on with a key operation in advance. Execution of message printing with key operation is also available. See Section 9.2. (Note 2) During execution, retry of the execution can be accepted just once. 1 sec. or more
(5) Execution of list printing (List 1, 2, 3)	Turn on (for 1 sec. or more) the terminal No. which the printing of list 1, 2 or 3 is allocated. (Note) Program "Printing on/off" to on with a key operation in advance. Execution of message printing with key operation is also available. See Section 9.3. 1 sec. or more
(6) Execution of operation record (No. A to D)	Programming of the operation record position is necessary. See Section 13.4. Turn on (for 1 sec. or more) the terminal No. which the operation record (No. A to D) is allocated. During ON time, the recording position shifts to 5 mm to the right from the programmed operation record position. (Note) Program "Printing on/off" to on with a key operation in advance. ON time ON time 5 mm Operation record position (10 to 90%)
(7) Reset of totallization	Available in "Totalization" (option). The totalized value can be reset at an interval time programmed. It can be reset with a contact signal, too. 1 sec. or more

⚠ **Warning**   **Contact signal to terminals**

For the contact signal applied to the remote contacts terminals, use a switch or a relay driven at 30V AC or less or 60V DC or less or a manual contact for a very light load.

This explanation is only for the remote contacts (option). Press $\boxed{\substack{0\\ \text{CLEAR}}}$ and $\boxed{\substack{5\\ \text{DATA I}}}$ simultaneously for 3 seconds or more to display the "Terminal Allocation for Operation" programming screen. This allows allocation of the desired functions to terminal Nos. 1 to 4 (EX 1 to 4).

Press [▲ /] or [▼ %] to change record Nos. record positions can be checked.

Reference 2 ▷ **Record position range**

Record position is programmable from 10% to 90% of the printing range.

Reference 3 ▷ **Error display**

Error is displayed when the programmed value is between 0% and 9% or between 91% and 99%.

Reference 4 ▷ **Storing**

Store the [temporarily stored] parameters into memory. (Programming change mark is printed.)

— 9 1 —

This programming display only appears for the printing format (option). This programming is to change the trace printing range automatically.

1 Automatic Range-shift

The automatic range-shift function changes the trace printing range up to 5 stages according to the measured values.

(1) This programming can be applied to each channel.

(2) The total printing range can be programmed optionally irrespective of the programmed range in the [Range/Printing range].

(3) For each range, refer to the minimum printing range in section 22.1 (Input Specifications). The printing may be dispersed if each range is programmed to be less than the minimum printing range.

(4) The range shifting is executed when the measured value exceeds approx. 0.5 mm from the minimum (zero) or the maximum (span) range.

<Example> Automatic range-shift programming
<Range No. 23 (K thermocouple)>

-200 ◄── Measuring value ──► 1370

Remarks 2 **Programming for the range No. 2 to No. 5**

Program the span and press [ENTRY] to advance the range Nos. The range No. advances up to No. 5. For the range No. which no span programming is required, press [ENTRY] key to skip it.

Remarks 3 **Return to the screen of Step (5)**

For storing parameters into memory, return the screen to Step (5).

Reference 1 **Checking parameters**

Press [ENTRY] to display parameters. The parameters are displayed sequentially each time [ENTRY] is pressed. Press [▲/] or [▼/%] to change channels.

Reference 2 **Storing**

Store the parameters into memory. (Programming change mark is printed.)

Reference 3 **Cancellation of programming**

For canceling the stored parameters, press [SHIFT] and [0/CLEAR] simultaneously at Steps (4) to (7), and then press [ENTRY] to store the cancellation.

Reference 4 **Returning to standard printing**

Point the cursor to (5 d) at Step (2) and press [ENTRY] . To return to the automatic range-shift function, execute the procedure of Steps (1) to (3) and store it.

Reference 5 **Scale printing at fixed- time printing**

Scale is printed in the order of channels. Range Nos. (R1 to R5) are also printed.

∗ Fill unused digits with spaces.

This programming display only appears for the printing format (option). This programming is to print the specified range in the [compressed/expanded] printing mode.

1 Compressed/Expanded printing

A specified range in the trace printing range can be printed in the compressed or expanded printing mode.
(1) This programming can be executed for each channel.
(2) The printing range can be programmed optionally irrespective of the programmed range in the [Range/Printing range].
(3) Up to 2 break points can be programmed.
<Example> Compressed and expanded programming
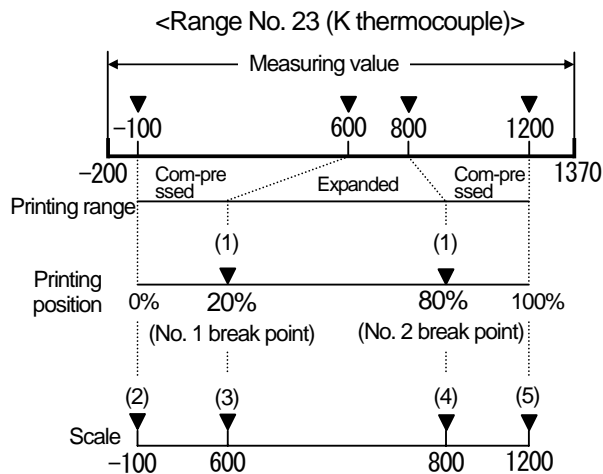

<Range No. 23 (K thermocouple)>

Mark ▼ is the programming point and No. (1) to (5) shows the order of programming. By pressing [ENTRY] after the programming ends, the next programming screen appears.
(Program No.1 break point and No.2 break point by 2 digits.
<Example> 5% →05)

2 Programming Mode

1) Screen 1 (Printing format check)

| Standard | Automatic range shift | Zone |
| | | Compressed/expanded |

Dots appear at the selected format.
By pressing [SET END], the dots disappear and the cursor appears instead.

2) Screen 2 (Programming channel)

Programming mode of compressed/expanded

Cursor — Channel — No. 1 break point — No. 2 break point

By selecting compressed/expanded (5 P), the cursor appears at the channel programming position.

3) Screen 3 (Programming break point printing position)

Programming No. 1 break point   Programming No. 2 break point (Note)
(1) Program each break point printing position (%) in the range of 10 to 90.
(2) When all programming are completed, return to the above display and execute [Storing].
(Note) No.1 break point should be lower than No.2 break point. When no programming for the No.2 break point is required, leave it as spaces.

4) Screen 4 (Scale programming of each printing position)

Printing position (%)

Programming value
(Max. 5 digits by left-justify)
(1) When programming a scale, the printing position advances to the next position. Program scales up to the 100% position.
(2) After completing the programming for 100%, press [ENTRY] to return to Screen 3.

3 **Programming Flow Chart**   <Example> Programming the details on the left page for CH 2

Other channel programming

This programming is necessary for each channel. For programming other channels, repeat the procedure from the "Operation screen".

Remarks 1   **Remedial measure to error display**
Press any key other than `SHIFT` and program again. When it is normal, the next screen appears.

Remarks 2   **No programming of No. 2 break point necessary**
Leave it as spaces and press `ENTRY`.

Remarks 3   **Return to the screen of Step (5)**
For storing parameters into memory, return the screen to Step (5).

Reference 1   **Checking parameters**
Press `ENTRY` to display parameters. The parameters are displayed sequentially each time `ENTRY` is pressed. Press `▲` or `▼%` to change channels.

Reference 2   **Storing**
Store the parameters into memory. (Programming change mark is printed.)

Reference 3   **Cancellation of programming**
For canceling the stored parameters, press `SHIFT` and `0 CLEAR` simultaneously at Steps (4) to (7), and then press `ENTRY` to store the cancellation.

Reference 4   **Returning to standard printing**
Point the cursor to (`Sd`) at Step (2) and press `ENTRY`. To return to the compressed/expanded function, execute the procedure of Steps (1) to (3) and store it.

Reference 5   **Scale printing at fixed time printing**
Scales at each printing position are printed like as –100, 600, 800 or 1200.
• "+" mark is printed at the printing position for break points.

* Fill unused digits with spaces.

This programming display only appears for the printing format (option). This programming is to print the printing area by dividing it into 2 to 4 zones. (RD200: 2 zones only)

1 Zone Printing

The printing area is divided into two zones (RD200) or four zones (RD2800) and the printing zone can be selected. This function is effective when printings overlap each other.
  (1) The printing zone can be selected for each channel.
  (2) The printing range for each zone is the programmed printing range in the [Range/Printing range].
  (3) The followings are printing position (mm) at the number of zone.

• RD200

Zone No. 1	0 to 45
Zone No. 2	55 to 100

• RD2800

Zone	Zone No.1	Zone No.2	Zone No.3	Zone No.4
2	0 to 81	99 to 180		
3	0 to 54	63 to 117	126 to 180	
4	0 to 36	45 to 81	99 to 135	144 to 180
Example of zone programming

<To divide into 2 zones with a 4-pen type model>

Channel 1 3 — 1st area (Printing range)
Channel 2 4 — 2nd area (Printing range)

Printing position (mm)
0   81 99   180

2 Programming Mode

1) Screen 1 (Printing format check)

Standard   Automatic range shift   Zone Compressed/expanded

Dots appear at the selected format.
By pressing $\boxed{\begin{array}{c}\text{SET}\\\text{END}\end{array}}$, the dots disappear and the cursor appears instead.

2) Screen 2 (Programming number of zones)

… Displays in RD2800 only

Programming mode for zone printing

Number of zones
(2 to 4)
(Note) For RD200 (2 zones only), Screen 2 is skipped and Screen 3 appears.

3) Screen 3 (Programming channel for zone No.1)

Reference 1 — **Communications type check**
Communications type is displayed. The communications type cannot be changed.

Reference 2 — **Address programming range**
01 to 99: Pr iUAtE (private) protocol
01 to 31: ñodbU5 (MODBUS) protocol
(Note) "01" is displayed only when "private" is changed to "MODBUS".

Reference 3 — **Transmission speed selection range**
1200, 2400, 4800, 9600, 19200 bps
Only 9600 and 19200 bps are available with the MODOBUS protocol.
(Note) "9600" is displayed only when "private" is changed to "MODBUS".

Reference 4 — **Character selection**
Characters are displayed with codes.

Code	Character length	Parity	Stop bit
7E1	7 bits	Even	1
7E2	7 bits	Even	2
7O1	7 bits	Odd	1
7O2	7 bits	Odd	2
8N1	8 bits	Non	1
8N2	8 bits	Non	2
8E1	8 bits	Even	1
8E2	8 bits	Even	2
8O1	8 bits	Odd	1
8O2	8 bits	Odd	2

(Note) "8N1" is displayed only when "private" is changed to "MODBUS".

Reference 5 — **Checksum selection range**
o n: Checksum ON
oFF: Checksum OFF
(Note) No display appears for the MODBUS protocol.

Reference 6 — **From " temporarily stored" to "stored"**
Pressing [ENTRY] for each programming executes temporary storing. Pressing [DISP] for 2 seconds or more executes storing and returns to the operation screen.

Reference 7 — **Returning to operation screen**
If the screen returns to the operation screen before pressing [ENTRY], the parameter is returned to the parameter before programming.

16. Math Expressions and Totalization

1 Math Expressions

(1) Measured values are computed and the results are displayed and stored into memory.
(2) Math expressions comprise basic calculations, totalization, flow rates, etc., which are depending on the relevant model code.
(3) 18 types of math expressions are provided and they can be programmed to any channel.

	Display characters	Names	Remarks
Basic calculation	(1) ᵰoᴎ	None	No computation (Display and printing of measured values)
	(2) ᵰUL	Arithmetical operation 1	+, -. x (Aax + By + Cxy + D)
	(3) d ⁱᴴ	Arithmetical operation 2	÷ (Ax/y + B)
	(4) LoᏀE	Natural Logarithm	$LoG_e\ X$
	(5) LoᏀ10	Logarithm	$LoG_{10}\ X$
	(6) PoᎽEᵣ	Exponential	e^X
	(7) ᵣooᵵ	Square root	$\sqrt{Rx - Rz/Rs - Rz}$ Rs: Max. range, Rz: Min. range
	(8) HUᵯⁱdⁱᵵᎽ	Temperature/ humidity	Computation of measured values by the dry and wet bulbs by using the relative humidity tables
	(9) Hⁱ PEᴀᵰ	Maximum	Maximum value at the programmed "interval period"
	(10) LoPEᴀᵰ	Minimum	Minimum value at the programmed "interval period"
	(11) ᴀᎽEᵣEᏀE	Average value	Average value at the programmed "interval period"
	(12) ᴀb5	Totalizing	| X |
	(13) Ꮯoᵯᵯ ⁱᵰ	Data communications input	Displayed only for the communications Interface (option)
Totalization, flow rate, etc.	(14) ⁱᵰᵵ	Totalization	Displayed only for the totalization (option)
	(15) ᵯᴀ55FLoᎽ I	Flow correction computation 1	
	⟩	⟩	
	(21) ᵯᴀ55FLoᎽ Ꞁ	Flow correction computation 7	

2 Totalizing

(1) Measured values and computed results are totalized and the results are displayed and printed. The reset of the totalization is executed with the programmed interval or a contact signal for the "remote contacts" (option).
(2) Totalization is displayed as "int". This can be programmed to any channel.

3 Instruction manual

An instruction manual (INST. No. INE-288) for "Math expression and totalization (option)" is attached separately.

17. Other Options | 17.1 Shunt Resistor for Current Input

DC current input can be measured by attaching a shunt resistor (option) to the input terminals.

1 Shunt resistor (Option) and Measurement current range

- A shunt resistor converts the DC current input into a DC voltage. The two types shown in the right table are available.
- The current measuring ranges are shown in the right table, too.

2 Connection

Connect a shunt resister to each channel for the DC current measurement.

Remarks ▷ **Caution on connections**

Only one shunt resistor is to be connected to a channel.

---

3 [Range/Printing range] and [Scale]

1) Range No.

The converted voltage with any shunt resistor is ±5 V DC and the range No. is "07".

2) Printing range

Program the printing range with the value after being converted into a voltage.

- Minimum value:
  Min. input current x shunt resistor value
- Maximum value:
  Max. input current x shunt resistor value

3) Scale

Program the scale with the physical quantity against the input current.

- Minimum value:
  Physical quantity of the minimum input current
- Maximum value:
  Physical quantity of the maximum input current

Shunt resistor and measuring range

Code	Resistance value*	Measuring range
EZ-RX100	100Ω	±50mA DC
EZ-RX250	250Ω	±20mA DC

Accuracy: 100Ω - Rated value ±0.05%
250Ω − Rated value ±0.1%

Ex) Connection of a shunt resistor to CH1

Using Range No.

Resistance value	Measuring range	Converted voltage	Range No.
100Ω	±50mA DC	±5VDC	07
250Ω	±20mA DC	±5VDC	07

Example of printing range

<Input to be printed with the trace printing: 4 to 20mA>

Use the shunt resistor of 250Ω for the maximum measuring current of 20mA.

- Minimum value: 4 (mA) x 250 (Ω) = 1 (V)
- Maximum value: 20 (mA) x 250 (Ω) = 5 (V)

Example of scale programming

<Physical quantity of 4 to 20mA is 0 to 500 litter/m^2>

- Minimum value: 0   • Maximum value: 500

－１０２－

1 **Transmitter Power Supply**

This power supply unit, which is designed to install on the rear panel (terminal board) of the instrument, supplies power (24VDC) to a transmitter that transmits the measurement input signals to your recorder.

    [Model] RZ-TPS01
    [Instruction manual] INST. No. INE-277 □

■ Adjustment

Adjustment comprises four kinds shown below. (1), (3) and (4) have already been adjusted. However, it is recommended for maintaining the measuring and printing accuracy to adjust them once a year.

Calibration	Details	Reference
(1) Measured values adjustment	Adjustment to keep the measured value against input within the accuracy ratings.	Sec.18.1
(2) Shift programming of measured value	Programming to shift a measured value	Sec.18.2
(3) Adjustment of printing position	Adjustment to set the printing range to the zero and span lines on the chart	Sec.18.3
(4) Adjustment for time-axis synchronization of pens	Adjustment of the gaps between pens for the time-axis synchronization	Sec.18.4

1 Adjustment of measured values

It is recommended for maintaining measuring and printing accuracy to adjust them once a year.
(1) Execute the adjustment for each channel.
(2) Execute the adjustment under the reference condition. (See the right table.)

Reference conditions

Items	Reference conditions
Ambient temperature	23 ±2°C
Ambient humidity	55 ±10%RH
Power voltage	100 ±1VAC
Power supply frequency	50 or 60 ±0.5Hz

2 Preparation

1) Preparation of tools

Tools	Input types			Remarks
	DC voltage	Thermocouple	Resistance thermometer	
DC standard voltage/current generator	○	○		Accuracy: Should be better than ±0.05%.
Reference junction compensator		○		0°C ±0.2°C or less
Thermocouple for test		○		Same type of thermocouple as input type
Standard variable resistor			○	Accuracy: Should be better than ±0.05%.
3-core copper wire			○	Same resistance for each 3 cores

2) Connection

Connections depend upon the input types. See the next page.

3) Before starting adjustment

(1) After the connection, mount the terminal board cover and turn on the power supply.
(2) Before starting adjustments, warm up your recorder for at least 30 minutes until it becomes stable. (It is recommended to warm it up for at least one hour if possible.)

Remarks ▷ **Adjustments**

Check and adjustments of the measured values need meticulous work in addition to the standard tools and reference conditions.
If you need checks or adjustments of the measured values, please consult your nearest CHINO's agent.

---

3 Connections

Connections depend upon the input types. Connect the standard tools to the input terminals to be adjusted.

⚠ **Caution** **Make sure to connect after turning off the power supply.**

To prevent any injury caused by electric shock, be sure to turn off the power supply before connections.

(1) In case of thermocouple input
Copper lead wire

Thermocouple wire *

(+)

(-)

Test tube

Input terminals

Silicon oil

Ice + distilled water

Vacuum bottle

DC standard voltage generator

Reference junction compensator

The electromotive force of the thermocouple input is reduced by an amount proportional to the temperature at the terminals. The recorder itself compensates (reference junction compensation) for this reduction. The adjustment is executed by inputs based on the reference electromotive force ($0°C$ reference). In case the "RJ selection" is set to "1" (Enable) in the "Range/Printing range" programming, an amount equivalent to the reference junction compensation has to be subtracted using a reference junction compensator.

20 mm/h	Approx. 20 days	Approx. 30 days	50 mm/h	Approx. 15 days

2 Operation check

Check items	Checking details

1) Printing conditions	(1) Chart feeding condition
	    Check that there is no paper jam or dislocation from the sprocket.
	(2) Text and trend line printing condition
	    Check that no disorder or abnormal condition is found in the text and trend line printing.

2) Display conditions	Check that no abnormalities are found in the displays of measured values, status and bar-graph.
3) Others	(1) Check that the measured values are normal. (2) Check if any noise or strange odors are generated.

Clean the main shaft of each pen once a year in order to maintain a satisfactory printing performance.

Plotter pen	Cartridge pen (RD200)	Cartridge pen (RD2800)

Main shaft

Main shaft
Main shaft

1 Main Shaft of Plotter Pen

(1) Turn off printing. Pull out the chart cassette and open the display section.
(2) Wipe off dirt from the main shaft with a cotton bud or similar tool. (Dirt can be wiped off more easily with a cotton bud soaked in alcohol.)
(3) Apply one or two drops of the provided lubricating oil to the main shaft.

2 Main Shaft of Cartridge Pen

(1) Turn off printing. Pull out the chart cassette and open the display section.
(2) Wipe off dirt from the main shaft with a cotton bud or similar tool.
(3) Apply one or two drops of the provided lubricating oil to the main shaft.

Remarks ▷ **Caution on cleaning and lubrication**

(1) Do not move the plotter pen or cartridge pen by hand.
(2) Use the provided lubricating oil. Do not use any other oil.

3 Cleaning the Door

The door is made of plastic*. Clean it with a dry soft cloth or with a soft cloth moistened with lukewarm water or a neutral detergent.
* Aluminum die-cast door is available an option. (RD200)

⚠ **Caution** **Do not use any chemicals**

Do not use thinner, benzene or other chemicals that may damage the plastic components. These may cause deformation or breakage to the door.

It is recommended for check measured values once a year for maintaining the measuring and printing accuracy.

1 Channels to be checked

Check the measured value for each channel. Different errors may occur for different channels even in the same range.

> **Remarks** **Totalization channel**
>
> To check a channel for which a math-function or totalization (optional) has been programmed, program the math expression to "ⁿ ₒ ⁿ" before starting the checking.

Reference conditions

Items	Reference conditions
Ambient temperature	23 ±2°C
Ambient humidity	55 ±10%RH
Power voltage	100 V AC ±1%
Power supply frequency	50 or 60 Hz ±0.5 Hz

(Note) Add ±0.01% per 1°C for a case other than 23 ±2°C.

2 Preparation

1) Preparation of tools

Tools	Input types			Remarks
	DC voltage	Thermo-couple	Resistance thermometer	
DC standard voltage/current generator	○	○		Accuracy: Should be better than ±0.05%.
Reference junction compensator		○		0°C ±0.2°C
Thermocouple for test		○		Same type of thermocouple as input type
Standard variable resistor			○	Accuracy: Should be better than ±0.05%.
3-core copper wire			○	Three copper wires shall have the same resistance values.

2) Connection

Connections depend upon the input types. See the next page.

3) Before starting adjustments

(1) Mount the terminal board cover and turn on the power supply.

(2) Before starting adjustments, warm up your recorder for at least 30 minutes until it becomes stable. (It is recommended to warm up for at least one hour if possible.)

> **Remarks** **Checking**
>
> Check and adjustments of the measured values need meticulous work in addition to the standard tools and reference conditions.
> If you need checks or adjustments of the measured values, please consult your nearest CHINO's agent.
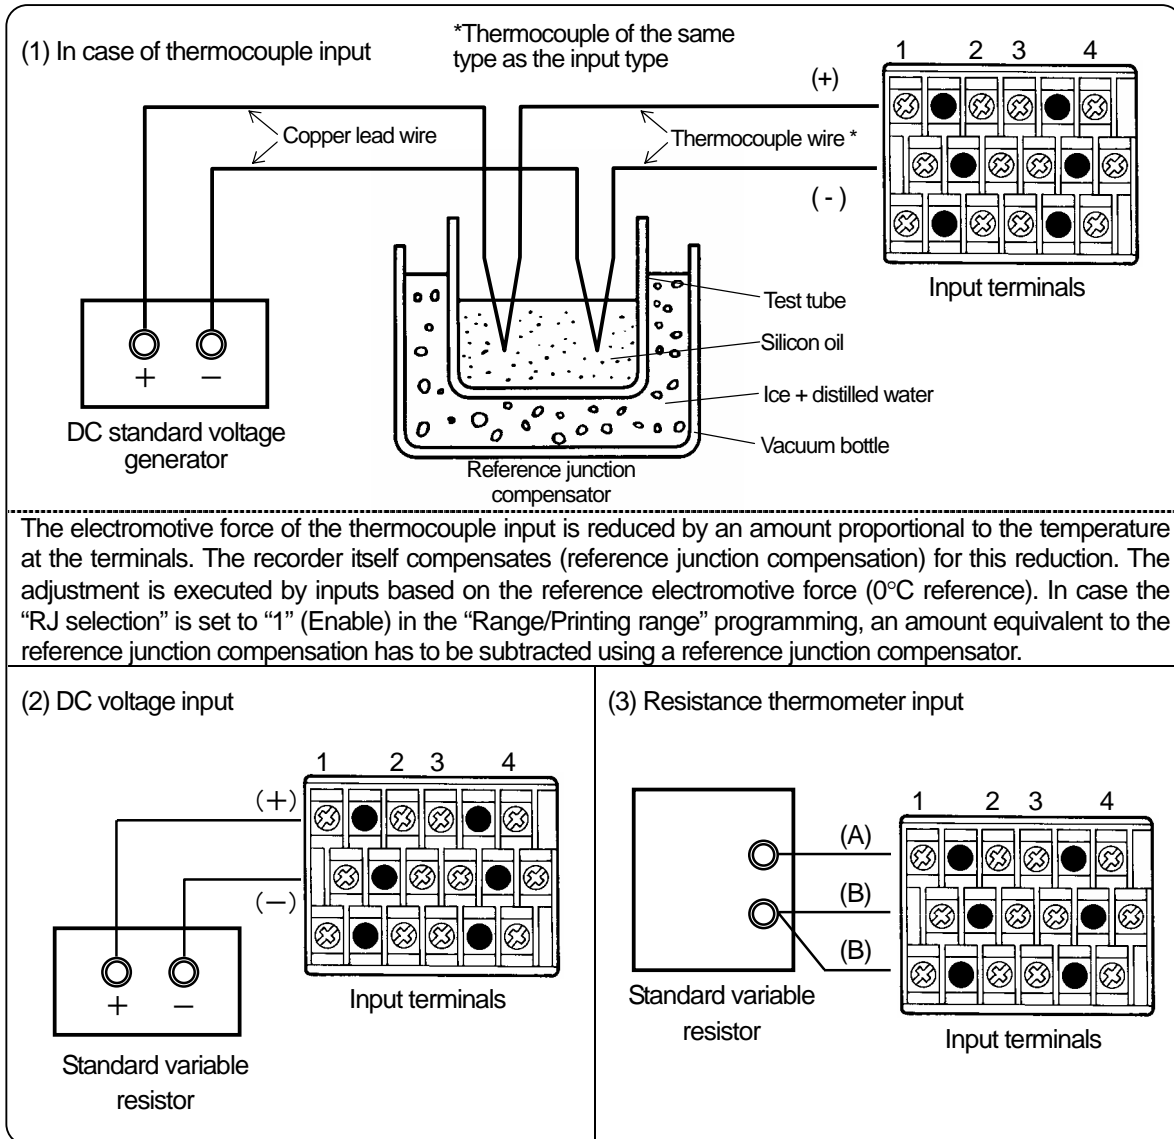

3 Connections

Connections depend upon the input types. Connect both standard and other tools to the measuring input terminals to be adjusted.

⚠ **Caution** **Turn off the power source before starting connections**

In order to prevent electric shock, turn off the power source before starting connections.

(1) In case of thermocouple input

*Thermocouple of the same type as the input type

(+)

Copper lead wire

Thermocouple wire *

(-)

Input terminals

Test tube

Silicon oil

Ice + distilled water

Vacuum bottle

+ −

DC standard voltage generator

Reference junction compensator

The electromotive force of the thermocouple input is reduced by an amount proportional to the temperature at the terminals. The recorder itself compensates (reference junction compensation) for this reduction. The adjustment is executed by inputs based on the reference electromotive force (0°C reference). In case the "RJ selection" is set to "1" (Enable) in the "Range/Printing range" programming, an amount equivalent to the reference junction compensation has to be subtracted using a reference junction compensator.

(2) DC voltage input

(+)

(−)

Input terminals

+ −

Standard variable resistor

(3) Resistance thermometer input

(A)

(B)

(B)

Standard variable resistor

Input terminals

4 Checking Method

Input the printing range (T) of 0%, 50% and 100% from a standard tool and obtain an error (e) by reading the measured values (M).

Error computation

$$e \,(\%) = \frac{M-T}{T} \times 100$$

Troubleshooting methods are shown classified by symptoms. Read the item that corresponds to the symptom.
> ⚠ **Caution**   **Repair and modifications**
>
> Never repair or modify the instrument by replacing assembled component units or parts, otherwise correct repair or modifications cannot be executed and also electric shock or damage of your recorder may occur.

1 Not Working

Check	Causes and remedial measures
1) Check if power is supplied to the power terminals.	Turn on the external power supply source.
2) Check if the power supply is as specified.	Supply the specified power (100 to 240V AC and 50/60 Hz).
3) Check if the connections to the power terminals are correct.	Connect the cable to the power terminals (L, N) correctly.
4) Try turning off or on the external power supply source.	
5) Initialize the parameters and check if your recorder recovers to normal conditions. See Section 20. (Caution) All parameters become the default values. Program them again.	

2 Measured Value Abnormal

Symptoms	Causes and remedial measures
1) Measured values are unstable.	• Check if the measuring terminals are loose. • Check if the input signal is unstable. • Check if the thermocouple is connected with another instrument in parallel and the burnout function is programmed to [Enable].
2) Check if the measured value is displayed as shown below. `----` `bUrn`	• Check if the input terminals are connected correctly. • Check if the input terminals are loose. • Check if the input signal wires are disconnected. • Check if the input signal exceeds the measuring range.
3) An error occurs.	• Check if the selection of ºC/ºF computation is correct. • Check if the input signal is correct. • Check if an extension wire is connected to the input terminal. (Thermocouple input type only) • Check the scale and adjust the measured values if any error is detected. (See Section 18.1.)
4) Influences by ambient temperature (Thermocouple input type only)	• Check if the RJ selection is 0 (disable) in [Range/Printing range] programming. (This is negligible if reference junction compensation is executed externally.) • Check if the terminal cover is mounted.

3 **Display Abnormal**

Symptoms	Causes and remedial measures
1) Measured value blinks.	Measured value of the channel in which an alarm activates. See Section 10.3.
2) Measured value is blank.	No measured value is displayed for the skipped channel.
3) Year, month, day, hour and minute are displayed.	This is one of the operation screens (Clock display). See Section 6.4.
4) "A" is displayed at the left end.	This is one of the operation screens (Alarm activation screen). See Section 6.4.

4 **Printing Abnormal**

Symptom	Causes and remedial measures
1) No printing is executed.	• Check if the printer is turned off. See Section 6.2. • Check if the cassette ribbon is mounted normally.
2) Digital printing is not executed.	All digital printings are not executed if the chart speed is programmed to be faster than 150mm/h. See Section 10.2.
3) Printing color is pale.	Replace the cartridge pen or the plotter pen.
4) Chart paper feed is abnormal.	• Check if the chart paper is unlatched from the sprocket. • Check if the chart paper cassette is securely inserted into the internal unit. • Check if the chart paper has been shuffled before loading it.

5 **Other Troubles**

Symptoms	Causes and remedial measures
1) Keys are not acceptable.	Keys are locked. Unlock them. See Section 11.12.
2) Parameters cannot be changed.	
3) Prarameters remain unchanged after changing them.	To store parameters to be programmed for each channel, press ⌜SHIFT⌝ and ⌜SHIFT⌝ simultaneously. If not, parameters are not stored into memory. See Section 8.2 and other sections for programming.

Request

If the above troubleshooting cannot solve your problem, certain parts may be defective. Check the following items and contact your CHINO's sales agent.
(1) Model (2) Serial No. (3) Details of trouble (4) Other symptoms found

It is recommended to replace parts periodically as a preventive measure to enable the use of your recorder under ideal conditions over long periods of time.

⚠ **Caution** **Replacement of parts**

Do not replace any parts other than consumable chart paper and pens, otherwise your recorder cannot be recovered correctly and a dangerous accident may occur. Consult CHINO's sales agent for replacing parts.

1 **Operation conditions**

The recommended parts replacement intervals apply when your recorder is used under the following conditions. The replacement intervals could be shortened if the ambient conditions are worse than the followings.

Items	Conditions
Temperature	20 to 25°C
Humidity	20 to 80% RH
Operation hours	8 hours/day
Corrosive gas	Shall be free of corrosive gases

Items	Conditions
Others	(1) A place free from dust, moisture or soot (2) A place free from vibrations or shock. (3) A place where no unfavorable conditions are to be expected.

2 **Recommended intervals of parts replacement**

1) Parts to be mounted (Consumable parts)

Part names		Recommended intervals	Remarks
Chart paper (RD200)	10 m (Standard)	20 days	In case of continuous use with a chart speed of 20 mm/h
	16 m (Option)	30 days	
Chart paper (RD2800)		30 days	In case of continuous use with a chart speed of 25 mm/h
Cartridge pen		2km	Could be shorter than 2 km depending on chart paper speed, pen speed and ambient temperature/humidity.
Plotter pen		100,000 characters	Could be less than 100,000 characters depending on chart paper speed and ambient temperature/humidity.

2) Component parts

	Part names	Recommended intervals	Remarks
Mechanical components	Pen servo (for cartridge pen)	4 to 6 years	
	Pen servo (for plotter pen)	4 to 6 years	
	Chart drive mechanism	6 to 8 years	
Electrical component	Motor (for chart paper)	4 to 6 years	
	Motor (for plotter pen)	4 to 6 years	
	Motor (for cartridge pen)	4 to 6 years	
	Power supply unit	5 years	Under an ambient temperature of 25°C
	Display unit	4 to 6 years	
	Sheet switch (key)	4 to 6 years	
	Mechanical relay for alarm output	70,000 times	Resistive load (rated contact capacity or less)
		20,000 times	Inductive load (rated contact capacity or less)
	EEPROM	7 years	Able to re-write about 100,000 times or less
	Lithium battery	7 years	

22. SPECIFICATIONS

1️⃣ Input Specifications

Number of measuring points: 1, 2, 3 and 4 points

Input signals: DC voltage (mV) …±13.8, ±27.6, ±69.0, ±200
±500

DC voltage (V)…±2, ±5, ±10, ±20, ±50 (Built-
in voltage divider for ±5 V or more)

DC current…Available by adding shunt
resistor (option)

Thermocouple…B, R, S, K, E, J, T, N,
NiMo-Ni, CR-AuFe, PtRh40-PtRh20
WRe5-WRe26, W-WRe26,
Platinel II, U, L

Resistance thermometer…Pt100 (1),
Pt100 (2), JPt100, Pt50, Pt-Co

Range: Program range number and printing range for each channel with key operation. (See Section 8.2 for range No. list)

Scale: Program minimum and maximum values with key operation.
Programming range…-9999 to 99999
Decimal point … Program arbitrary

Measuring range: Refer to the list of range No. in Section 8-2.

Minimum printing range: Refer to the following table

DC voltage	1/5 or higher than the measuring range.	
Thermo-couple	2/5 or higher than the measuring range when converted into electromotive force. (In the case of range Nos. with minus measuring ranges, a temperature of 0°C or higher is specified as the lower-limit measuring value.)	
Resistance thermometer	Pt100	100°C span or more
	Pt50	200°C span or more

Accuracy rating: Refer to item 6️⃣ (at reference operating condition).

Temperature drift: ±0.01% full scale/°C (converted into reference range)

Measuring cycle: About 100 msec (CH1 to CH4)

Reference junction compensation: Inside (enable) or external (disable) is selectable.

Reference junction compensation accuracy:
K, E, J, T, N and Platinel II…±0.5°C or less
Other than the above*… ±0.1°C or less
*Except PtRh40-PtRh20

Input resolution: Approx. 1/56000 (converted into reference range)

Burnout: Effective input… Thermocouple, resistance thermometer
Programming range …Selection from up-scale, down-scale or disable for each channel

Allowable signal source resistance:
DC voltage inputs, thermocouple inputs
…1kΩ or less*
Resistance thermometer inputs
…10Ω or less
* Without burnout

Input resistance: Thermocouple input …About 8MΩ
DC voltage inputs (range of ±2 V or less)
…About 8MΩ
DC voltage inputs (range of ±5 V or less)
…About 1MΩ

Maximum input voltage

DC voltage inputs, thermocouple	±10 V DC or less (range of ±2 V or less)
	±60 V DC or less (range of ±5 V or less)
Resistance thermometer	±6 V DC or less

Input correction: Shift programming for each channel

Input filter: Program primary delay filter
1 to 10 sec. and "0" (none) for each channel.

Maximum common mode voltage: 30VAC

Common mode rejection ratio: 140 dB or more (50/60 Hz)

Series mode rejection ratio: 50 dB or more (50/60 Hz)

Terminal board: Detachable and removable for wiring

2️⃣ Printing

Printing accuracy: Measuring accuracy + ±.0.3% of printing range (under the reference operation condition)

Printing dead and: 0.2% of printing range

Printing system:

Trace printing… Disposable cartridge pen
Digital data printing …. Plotter pen

Step response: RD200 … 1 sec. or less (90% response)
RD2800 … 1.5 sec. or less (90% response)

Print color: Trace printing ….1st pen (Red), 2nd pen (Green),
3rd pen (Blue), 4th pen (Brown)

Digital data printing … Purple

<<Digital printing>>

① Periodic data printing : Printing of time, channel No., measured values and engineering unit with programmed interval

② Digital data printing : Printing of time, channel No., measured values and engineering unit with trace printing on demand

③ Year, Month, day, time, time line : Printing of year, month, day and time when turning on the power. Printing time line and time every on the hour. Printing year, moth and day at 00:00 and every specific interval

④ Channel No., scale, tag * : Printing of scale, channel No. and tag (only if they are programmed) with every specific interval

⑤ Chart speed : Printing of chart speed with every specific interval

⑥ Alarm Activation/ Reset : Printing of time, channel No., alarm type and alarm level when an alarm activates. Printing time, channel No. and alarm level when the alarm is reset. Memory volume is max. 48 data

⑦ Programming change mark : Marking when changed parameters are stored

⑧ POC mark : Marking when time-axis synchronization is programmed

⑨ List printing : Printing of parameters (list 1 or 2) on demand
List 1: Chart speed, range/printing range, scale, subtract printing, periodic data printing, printing format and alarm
List 2: Chart speed (3 speeds), alarm output, time-axis synchronization, remote contacts and math expression
List 3: All parameters (List 1 + List 2)

22. SPECIFICATIONS

⑩Message : Printing of message in message No. selected
Numbers of message: Max. 5
Message programming: Max. 15 digits

Chart paper: Depending on models

Model	System	Printing width	Total width	Total length
RD200	Folding type	100mm	114mm	10m
RD2800	Folding type	180mm	200mm	20m

Chart speed: 1 to 600mm/h, 1 to 200mm/h
Default … RD200: 20mm/h
RD2800: 25mm/h
Chart speed accuracy: Within ±0.1%, For the chart scale after feeding 1000mm or more.
Skip function: No display or printing is executed for the channels for which no range is programmed.
Time axis synchronization:
On or off selectable with key operation
Subtract printing:
Printing of difference between measured value and reference channel (or reference value)
Pen lift: Pens are automatically lifted up when printing is off.

3 Indication and Display

Trace printing indication: Bargraph display for each channel

Model	No. or segment	Channel color segment
RD200	51	5-segment each
RD2800	101	10-segment each

Digital display: 16- and 7-segment LCD with cursor
16-segment … Character height: 7.5 mm, orange
7-segment …. Character height: 6.5 mm, white

Model	16-segment	7-segment
RD200	1 digit	20 digits
RD2800	1 digit	30 digits

Display items: ①Simultaneous display of measured values for all channels ② Year/month/day (only RD200) ③ Time ④ Chart speed ⑤ Alarm status
Display switching: Each time ⎡DISP⎤ is pressed, the display item changes.
RD200 …. ① → ②③④ → ⑤
RD2800 … ①③④ → ⑤
Measured value display: -9999 to 99999 for each channel (Decimal point can be placed at desired position with the scale programming)
Status: Following 6 status lamps are available.

Display text	Condition to light	Color
RECORD ON	Printing ON	Green
KEY LOCK	Key lock	Blue
ALARM	Alarm occurrence	Red
CHART END	Just before chart paper ends	Red
FAIL	Hardware related to servo mechanism abnormal	Red
POC	Time axis sync. ON	Blue

Chart illumination: CFL

4 Alarm

Alarm point: Numbers of channel x numbers of level (4)
Alarm display: ⎡Alarm⎤ status lamp lights and the measured value blinks at alarm activated channel. Alarm display screen indicates alarm channel and alarm type at level digit.
Alarm type: Selectable from the following 10 types for each alarm point

Absolute value	H: High limit	L: Low limit
	E: High limit with standby	F: Low limit with standby
Rate-of-change *1	U: Increase limit	D: Decrease limit
Difference *2	B: Differential high limit	S: Differential low limit
	J: Differential high limit with standby	K: Differential low limit with standby

*1: Variation range per unit time (Note)
(Note) Measuring cycle x measuring count (1 to 20)
*2: Difference between two channels

Alarm deadband: 0.1 to 9.9% of scale programming range
Alarm output: Option

5 Programming and Operation

Key types: See Section 7.1.
Key functions: See Section 7.2 .
Basic operation: Basic operation with keys
① Printing ON/OFF ② Chart paper feeding
③ Operation screen switching
Operation: Operation with keys
Selection of ① Digital data printing *1 ② List printing *1 ③ Message printing *1 and ④ Printing format*2
*1: Operation with remote contacts (option) is also available
*2: Only available with option
Pen change mode: Pen moves to the position to beeasily changed.
Standard programming:
Range/printing range, °C/°F computation, chart speed, time, scale, skip, subtract printing, alarm, alarm deadband, periodic time printing, engineering unit, tag, message, burnout, passcode/key lock, input filter
Optional programming:
Alarm output…Relay No., AND/OR, output mode
Remote contacts…Terminal allocation for operation, 3 chart speeds, operation record position
Printing format……Automatic range-shift printing, compressed/expanded, zone printing
Communications interface…Communications protocol, communications specifications
Math expression…Selection of types, parameters
Totalization…Starting time, interval
Engineering port: All parameters can be programmed with engineering software "PASS" (option) installed on a personal computer

22. SPECIFICATIONS

6 Operation Conditions

Operation conditions: Refer to the following table

Items		Reference operation	Normal operation	
Ambient temperature		21 to 25°C	0 to 31°C	31 to 50°C*
Max. ambient humidity		80%RH	80%RH	80 to 50%RH*
Min. ambient humidity		20%RH	20%RH	
Power supply voltage		100VAC ± 1%	90 to 264VAC	
Power supply frequency		50/60Hz ± 0.5%	50/60Hz ± 2%	
Posture	Left/right	0°	0 to 10°	
	Forward tilting	0°	0°	
	Backward tilting	0°	0 to 30°	
Warming-up time		30 min. or more	Not necessary	

*Decrease from 80% RH at 31°C, and decrease to 50% at 40°C

Transportation condition:

Ambient temperature/humidity… -20 to 60°C, 5 to 90%RH (without condensation)

Vibration…10 to 60Hz, 4.9 m/S^{2}*

Impact…392 m/S^{2}*

* When shipping out from a factory

Storage condition:

Ambient temperature/humidity… -20 to 60°C, 5 to 90%RH (without condensation)

7 General specifications

Rated power voltage: 100 to 240 VAC, 50/60 Hz

Power consumption: Maximum 60V A

Power failure protection: Programmed parameters stored into EEPROM memory. Clock circuit sustained for minimum 8 years by a lithium battery. (8 hours operation per day)

Insulation resistance:

Between primary and protective conductor terminals …20MΩ or more at 500 V DC

Between secondary and protective conductor terminals …20MΩ or more at 500 V DC

Between primary and secondary terminals …20MΩ or more at 500 V DC

Dielectric strength:

Between primary and protective conductor terminals …1 minute at 1500 V AC

Between secondary and protective conductor terminals …1 minute at 500 V AC

Between primary and secondary terminals …1 minute at 2300 V AC

Primary terminals: Power terminals, Alarm output terminals (MOS relay, mechanical relay "a" contact)

Secondary terminals: Measuring input terminals, Remote contacts terminals, Communications interface terminals , Alarm output terminals (Mechanical relay "c" contact),

Case assembly material: Door Frame …ABS resin
Front plate…Polycarbonate
Enclosure…Steel

Color: Door … Frame: Black (equivalent to Munsell N3.0)
Front plate**:** Transparent
Enclosure…Gray (equivalent to Munsell N7.0)

Mounting: Panel mounting

Terminal screws: Power terminals …M4.0
Terminals other than above …M3.5

Weight: RD200 …Approx. 4.0 kg (with fully options)
RD2800 …Approx. 9.0 kg (with fully options)

Dimension: RD200···144×144×258 (mm)
RD2800···288×288×220 (mm)

Panel cutout : RD200···138×138 (mm)
RD2800···281×281 (mm)

Clock accuracy: Within ±2 minutes per 30 day
(Under reference operating conditions, Except errors when power supply is turned on or off)

Packing material: Layered cardboard is used as cushion material

8 Safety Regulations

CE: Conforms to EMC and low voltage directives

UL: UL3111-1 (Approval pending)

CSA (C-UL): CSA …C22.2 No.1010 (Approval pending)

IP: Conforms to IEC529 IP54

22. SPECIFICATIONS

9 Accuracy Ratings

No.	Input type	Measuring range	Reference range	Accuracy rating
01		-13.80 to 13.80mV	±13.8mV	
02	DC (mV)	-27.60 to 27.60mV	±27.6mV	
03		-69.00 to 69.00mV	±69.0mV	
04		-200.0 to 200.0mV	±200.0mV	
05		-500.0 to 500.0mV	±500.0mV	±0.1% ± 1 d
06		-2.000 to 2.000V	±2V

78		-200.0 to 649.0°C	400Ω	

No.	Input type	Measuring range	Reference range	Accuracy rating
79	Pt50	-200.0 to 649.0°C	220Ω	±0.1% ± 1 d
80	Pt-Co	4.0 to 374.0K	220Ω	±0.15% ± 1 d

Note) " ± 1 d" at accuracy rating stands for ± 1 digit.

Note) Thermocouple inputs do not include reference junction compensation accuracy.
The Indication equivalent to 200 μV may vary under the test environment of EMC directive.

■Exceptions to accuracy rating

Input type	Measuring range	Accuracy rating
K, E, J, T, L	-200 to 0°C	±0.2% ± 1 digit
R, S	0 to 400°C	
B	0 to 400°C	Not specified
	400 to 800°C	±0.15% ± 1 digit
N, U	-200 to 0°C	±0.3% ± 1 digit
W-WRe26	0 to 100°C	±4% ± 1 digit
	100 to 300°C	±0.5 % ± 1 digit
PtRh40-PtRh20	0 to 300°C	±1.5% ± 1 digit
	300 to 800°C	±0.8% ± 1 digit
CR-AuFe	0 to 20K	±0.5% ± 1 digit
	20 to 50K	±0.3% ± 1 digit
Pt100 ('97)	700 to 850°C	±0.15% ± 1 digit
Pt-Co	4 to 50K	±0.3% ± 1 digit

Note) Thermocouple input is converted into the reference range.

22. SPECIFICATIONS

🔟 Option

1) Alarm outputs

Output types: ①Alarm point output ② FAIL output ③ Chart paper end (C.End) output

Numbers of outputs: RD200 … 6 points
RD2800 …6 or 12 points

Contact capacity (with resistive load):
①MOS relay output … 240 V (AC, DC), 50 mA (AC, DC)
② Mechanical relay (Common for "a" and "c" contacts) …
100VAC 0.5 A, 240VAC 0. 2A, 100VDC 0.3 A

Output wiring: AND/OR output selection is available for each alarm points (including FAIL and C.End)

Relay coil phase: Energize/Not energize selectable*

Relay output latch: Hold/Not hold selectable*

Alarm display latch: Hold/Not hold selectable*
*Common to all relays

Dimension: The following length will be added for the depth.
RD200…14 mm (MOS relay, Mechanical "c" contact)
25 mm (Mechanical "a" contact)
RD2800…16 mm (MOS relay, Mechanical "c" contact)
27 mm (Mechanical "a" contact)

2) Remote contacts

Input terminals: 4 points (Common terminals: 2 points)

Input signal: Contact (Open/Shorted)

Voltage when the contact is open: Approx. 5 V

Current when the contact is shorted: Approx. 2 mA

Operations: Up to 4 input terminals can be selectable in the following table.

Operation	Terminal
① Printing ON/OFF, 3 chart speeds	2
② Message (No.1 to No.5) printing	4
③ Message (No. 1 and No. 2) printing	2
④ Digital data printing	1
⑤ List 1 printing	1
⑥ List 2 printing	1
⑦ List 3 printing	1
⑧ Operation record A	1
⑨ Operation record B	1
⑩ Operation record C	1
⑪ Operation record D	1
⑫ Reset of totalization*	1

*This operation is only available for the "totalization" (option).

3) Printing format

Trace printing format, ① Automatic range shift, ② Compressed/Expanded or ③ Zone scale, is selectable for each channel.. The format ③ is common to all channels.

Automatic range-shift	Printing area can be divided up to 5 ranges. It switches the range according to the measured values automatically for printing.
Compressed/ Expanded	Specific printing range is compressed or expanded for printing.
Zone scale	Printing area is divided into 2 to 4 zones*. Data of each channel is printed in the relevant zone. *RD200 … 2, RD2800 … 2 to 4

4) Others

Options	Detail
Communications interface*	Specify one of the following modes. RS-232C, RS-422A, RS-485
Input resistance for current input*	Capable up to ±50mA DC by connecting an input resistance to the measuring input terminal. 100Ω: Applicable current ±50mA 250Ω: Applicable current ±20mA
Math expression*	One of following math expressions is selectable for each channel. Addition, subtraction, multiplication, division, natural logarithm, logarithm, exponential, square root, temperature/humidity, maximum, minimum, average value, absolute value, data communications input*, flow rate compensation. *This function is only available for the "communications interface" (option).
Totalizing*	Totalizing measured values and calculation results. Reset function is executed with programmed intervals or remote contacts signals*. *This function is only available for the "remote contacts" (option).
Transmitter power supply*	Power supply unit for the transmitter generating input signal to the recorder
16 m chart paper	RD200 only …. Total chart paper length of 15.6 m

* Exclusive instruction manual is provided.
