## For Best Performance

### Battery charge

The handset is powered by a rechargeable Nickel-Metal Hydride (Ni-MH) battery. Charge the battery for **6 hours** before initial use (p. 13).

- **As preventative maintenance, clean the handset and base unit charge contacts with a soft, dry cloth once a month. Clean more often if the unit is subject to grease, dust or high humidity.** Otherwise the battery may not charge properly.

### Base unit location/Noise

Calls are transmitted between the base unit and handset using wireless radio waves. **For maximum distance and noise-free operation**, the recommended base unit location is:

Away from electrical appliances such as a TV, personal computer, cellular phone charging units or another cordless phone.

In a HIGH and CENTRAL location with no obstructions such as walls.

#### Note:

- If you use the handset near a microwave oven which is being used, noise may be heard from the receiver or the speaker. Move away from the microwave oven and closer to the base unit.
- If you use the handset near another cordless phone's base unit, noise may be heard. Move away from the other cordless phone's base unit and closer to your base unit.

# Installation

## Connections

- USE ONLY WITH Panasonic AC ADAPTOR PQLV1AL.
- The AC adaptor must remain connected at all times. (It is normal for the adaptor to feel warm during use.)
- If your unit is connected to a PBX which does not support Caller ID, you cannot access Caller ID services.
- This unit will not function during a power failure. We recommend connecting a standard telephone to the same telephone line or to the same telephone jack using a telephone double adaptor.
- KX-TG5240AL is not designed to be used with rotary (pulse dialling) services.
- \* If the unit is connected to a telephone line with ADSL service, you may hear noise from the receiver or speaker during conversations or the unit may not display caller's phone number properly. We recommend connecting a noise filter (contact your ADSL service provider) to the telephone line between the base unit and the telephone line jack.

## Installation

### Installing the Battery in the Handset

Insert the battery (①), and press it down until it snaps into the compartment (②). Close the cover.

Preparation

#### To replace the battery:

Press the notch on the cover firmly and slide it as indicated by the arrow. Replace the old battery with a new one (p. 14). Close the cover and charge the handset for 6 hours.

### Battery Charge

Place the handset on the base unit for **6 hours** before initial use.

- The unit beeps once, the CHARGE indicator lights and "Charging" is displayed.
- When the battery is fully charged, "Charge completed" is displayed if there are no new calls in the Caller List.

CHARGE Indicator

### Battery strength

You can confirm the battery strength on the handset display. Battery strength is indicated by the icons shown in the chart to the right.

Display prompt	Battery strength
	Fully charged
	Medium
	Low
	Needs to be recharged.
	Discharged

## Installation

### Recharge

Recharge the battery when:

- “Recharge battery” is displayed on the handset,
- “” flashes, or
- the handset beeps intermittently while it is in use.

- The display will continually indicate “Recharge battery” and/or “” will flash when the handset battery is charged for less than 15 minutes and the handset is lifted off the base unit.
- If the battery has been discharged, the handset will display “Charge for 6 HRS” and “” when you place the handset on the base unit. The handset will not work unless the battery is charged. Continue charging.

#### Battery replacement:

If you cleaned the charge contacts and fully charged the battery, but after a few telephone calls, “Recharge battery” is displayed and/or “” continues to flash, or “Charge for 6 HRS” and “” are displayed, the battery may need to be replaced. Please replace with a new Panasonic HHR-P104 battery. To replace the battery, see page 13.

### Battery information

After your Panasonic battery is fully charged, you can expect the following performance:

Operation	Operating time
While in use (TALK)	Up to 5 hours
While not in use (Standby)	Up to 11 days
While using the Clarity Booster feature (p. 31)	Up to 3 hours

- A fully charged battery will give you up to 5 hours of continuous talk time, or keep your handset in Standby mode to receive incoming calls for up to 11 days (if no phone calls are made). Battery power is consumed whenever the handset is off of the base unit, even when the handset is not in use. The longer you leave the handset off of the base unit, the time you can actually talk on the handset will be shortened. Actual battery performance depends on a combination of how often the handset is in TALK mode and how often it is in Standby mode.
- **As preventative maintenance, clean the handset and base unit charge contacts with a soft, dry cloth once a month. Clean more often if the unit is subject to grease, dust or high humidity.** Otherwise the battery may not charge properly.
- If the battery is fully charged, you do not have to place the handset on the base unit until “Recharge battery” is displayed and/or “” flashes. This will maximize the battery life.
- If you want to keep the battery fully charged at all times, place the handset on the base unit when the handset is not used. The battery cannot be overcharged.
- When the Clarity Booster feature is turned on automatically or manually, battery operating time may be shortened (p. 31).

### Using the PAUSE Button (For PBX Line/Long Distance Calls)

**Handset Base Unit**

We recommend you press the soft key (**PAUSE**) on the handset or press [**REDIAL/PAUSE**] on the base unit if a pause is required for dialling with a PBX or to make a long distance call.

- “**PAUSE**” is displayed on the handset only when dialling before pressing [**↶**] or [**↷**] (p. 30), or storing numbers in the phone book (p. 41).

[**9**] ➔ Soft key (**PAUSE**) or [**REDIAL/PAUSE**] ➔

- Pressing the soft key (**PAUSE**) on the handset or [**REDIAL/PAUSE**] on the base unit once creates a 3.5 second pause. This prevents misdialling when you dial after confirming the entered number (p. 30) or dial a stored number (p. 43, 44, 48).
- Pressing the soft key (**PAUSE**) on the handset or [**REDIAL/PAUSE**] on the base unit more than once increases the length of the pause between numbers.

## Mailbox Features

The Answering System provides three voice mailboxes. You can share these mailboxes with other members of your family or office as you wish. Callers from touch tone phones can specify a mailbox in which to leave a message. If callers do not specify a mailbox or call from rotary telephones, messages will be recorded into Mailbox 1.

### When someone calls

When the Answering System is on (p. 66), callers will hear a greeting message (p. 24).

- While or after hearing the greeting, callers can specify a mailbox by pressing **#[1]** (Mailbox 1), **#[2]** (Mailbox 2) or **#[3]** (Mailbox 3). They will then hear “Please leave your message”, and they can start recording a message.
  - If you would like callers to leave messages in a specific mailbox, we recommend you record a greeting message such as: “Hello, this is (your name and/or number). Sorry, we cannot take your call. If you have a message, for John press **#[#]** and **[1]**, for Jane press **#[#]** and **[2]**, for Jack press **#[#]** and **[3]**, before the beep. Or just stay on the line and leave a message after the beep. Thank you.”
- Callers wait until the greeting ends, then they can leave a message. Messages will be automatically recorded into Mailbox 1 if no mailbox is specified.

- The total recording time of all messages (greeting, incoming and memo) is **about 16 minutes** (about 8 minutes in “Enhanced recording” mode, p. 28). If messages are recorded in noisy rooms, the time may be shortened by up to 3 minutes.
- To select the caller’s recording time, see page 26.
- A maximum of 64 messages (including the greeting and memo messages) can be recorded.

### Useful information

- You can leave a memo message for other users in a mailbox with the base unit (p. 71).
- You can transfer a call to one of the mailboxes, in which callers can leave a message (p. 72).

## Instructions to customer

### Installation

Attached to this apparatus is an approval label. This label is evidence that it is a "Permitted Attachment" which has been authorised to be connected to your telephone service.

Conditions relating to connection and operation of this Permitted Attachment are contained in Telecommunications General By-Law 220 (5).

You are authorised to install this Permitted Attachment yourself by plugging it into the line socket of any regular telephone. You may connect it in place of your existing telephone or to any spare telephone socket installed in your premises.

To disconnect your existing telephone you must first remove its plug from the line socket. You can then insert the plug of your Permitted Attachment into the socket and use your equipment.

If the plug of your existing telephone cannot be readily removed, you will have to remove the screw securing it. To do this proceed as follows:

1. Loosen screw "A" sufficiently to remove the socket cover. (See Fig. 1.)
2. Remove screw "B" and withdraw the plug. (See Fig. 2.)
3. Replace screw "B". (See Fig. 3.) Ensure that it screws completely into the socket recess. (If the screw is too long, increase the hole depth or replace the screw with one 5 mm shorter.)
4. Replace socket cover and tighten screw "A". (See Fig. 4.)

## Important Information

If you are satisfied with the operation of your telephone service after plugging in your Permitted Attachment, your installation is completed.

You will be unable to connect this Permitted Attachment if your telephone service consists only of a wall phone or an old style telephone which is not connected by means of a modern plug and socket. In such cases a new socket will need to be installed.

Should the Permitted Attachment not operate when plugged into a socket, it is either faulty or unsuitable for operation with your telephone service. It should be returned to the store where purchased or an Authorised Service Centre.

### Service difficulties

If at any time a fault occurs on your telephone service, carry out the following checks before you call for service:

- Disconnect the Permitted Attachment and try using the service with the normal telephone.
- If the telephone service then operates satisfactorily, the fault is in your Permitted Attachment. Leave the Permitted Attachment disconnected and report the fault to its supplier or agent to arrange for repair.
- If when using the telephone the service is still faulty, report the fault to "Service Difficulties and Faults" for attention.

You are required to keep this Permitted Attachment in good working order while it is connected to your telephone service. Its construction or internal circuit must not be modified in any way without permission.

### WARNING

This cordless telephone system does not incorporate provision for secrecy of conversations. Appropriately tuned radio equipment and other cordless telephone systems in close proximity may be used by a third party to monitor and possibly interrupt conversations in progress when this system is on radio operation.
