*Tune an AM radio to a band with no broadcasting. Press a button on the remote control toward the radio. Sound will be fluttering when you press any key and the radio receives the signal. This means the remote control unit is working.

| Closed Caption Problem | Possible Remedy |
|---|---|
| Misspelled captions are shown. | Spelling errors may pass through uncorrected by the closed captioning production company in a live broadcast. |
| Text is not shown in its entirety or there is a delay of what is being said. | Captions that are delayed a few seconds behind the actual dialogue are common for live broadcasts. Most captioning production companies can display a dialogue to a maximum of 220 words per minute. If a dialogue exceeds that rate, selective editing is used to insure that the captions remain up-to-date with the current TV dialogue. |
| Captions are scrambled with white boxes on the TV screen. | Interference caused by building, power lines, thunderstorms, etc. may cause scrambled or incomplete captions to appear. |
| No captions are displayed in a program which must contain closed caption. | Broadcasters may use a time compression process to the actual program so that additional advertising time can be given. In this case, captions will be lost since the decoder cannot read the compressed information. |
| No captions are displayed when playing a prerecorded videotape with closed caption. | The videotape may be either an illegal copy or the tape duplicating company may accidentally have left out the captioning signals during the copying process. |
| The TV screen shows a black box. | You are in TEXT mode. Select CAPTION [C1], [C2] or [OFF]. |
