SuperFine Pitch provides better image detail with high definition sources. The Aperture Grill was improved by making the vertical slits a finer pitch that increases the number of slits by up to 65% (16 x 9 base). Also improved were the High Precision Deflection Yoke, Fine Focus Electron Gun and the inclusion of higher intensity Luminescent Phosphors. The result is a more detailed image for both moving and still images, higher resolution picture quality, and better edge detail.

*All Sony digital still cameras and camcorders except models DSCD-700, DSCD-770, DCR-TRV900 and DSR-PD100A store images on a Memory Stick in the DCF file format, which is required for playback on these projectors. If the image file is renamed or manipulated, the DCF file format must be restored before playback is possible. Images captured on all other digital still cameras and camcorders will need to be formatted on a PC to the DCF file format (with third party software not supplied with the projector) before they can be viewed.
