Other Functions

Dividing a Message

You can divide a message during recording or playback, so that the message is divided into two and the new message number is added to the divided message. By dividing a message, you can easily find the point you want to play back when you make a long recording such as a meeting. You can divide messages until the total number of messages in the folder becomes 99.

While recording or playing back a message, press **DIVIDE** at the point you want to divide.

Tip
You can divide a message during recording pause.

- When you press **DIVIDE** during recording: The new message number is added at the point you pressed the button, and the new message number and "DIVIDE" flash for 3 seconds. The message will be divided into two; however, the messages will be recorded without a break.

To play the divided message

Press **LEFT** or **RIGHT** to display the message number as the divided messages each have message numbers.

Tip
To play the divided messages continuously
Select ON for CONT in the menu as described in "Playing Back All Messages in a Folder Continuously".

- If 99 messages have been recorded in a folder, you cannot divide a message. In that case, reduce the number of messages to 98 or less by erasing unnecessary messages or by moving some of the messages to another folder before dividing a message.
- If you divide a message with an alarm setting, the alarm setting remains only with the former message divided.
- You cannot divide a message in the first or the last 1 second.
- If you divide a message frequently, the unit may become unable to divide a message.
- Once a message is divided, you cannot combine the divided messages with the IC recorder.
- If you divide messages too frequently while the unit is recording them, the following phenomenon may occur: The OPR indicator keeps flashing, and you cannot operate the unit for a certain period. This is not a malfunction. Wait until the OPR indicator goes off.
