TABLE OF CONTENTS

1. STANDARDS

MIU202T-S Installation, Operation & Diagnostics   Edition: March 16, 1999   Page 1

Meets FCC Rules Part J, Subpart 15, Class A for radiated emissions.

2.   PRODUCT OVERVIEW

The **MIU202T** is an industrial grade Bell202T modem for connection to unconditioned and conditioned, voice grade, type 3002 two or four-wire leased lines and metallic lines (eg; pilot wires). It can be powered from a wide range of AC and DC power supplies, it is internally surge protected on both the power and analog lines, and it will operate in temperatures from -40 to +85 deg C.

Internally, the MIU202T consists of a **baseboard** and a **communication module**. The **baseboard** includes the power supply regulation and surge protection.   The **communication module** is a Telenetics™ **Pony Express™ PE202T-S** Modem Module.

The MIU202T is packaged specifically for the harsh environments found in utility substations and industrial facilities. Though functionally similar to commercial modems, the MIU202T includes special features that make it particularly well suited for utility and industrial applications:

Environment: The MIU202T has been designed specifically for use in harsh environments. In addition to an extended temperature range (-40 to +85º C), the MIU202T includes surge, shock, vibration, and safety features superior to those of conventional commercial modems.

Power Supply: The MIU202T can be powered from a broad range of AC and DC power supplies, such as an auxiliary supply (eg; 12VDC) from another piece of equipment, 125VDC from a station battery or a standard 120VAC.

Industrial: The MIU is packaged in a rugged, compact, non-metallic (ABS) enclosure. Designed for unmanned locations, the MIUs do not include the array of pushbuttons and LEDs normally associated with consumer-type modems. Configuration is by dip switches. Standard industrial connectors for data, analog and power interfaces allow reliable interconnection to other industrial components.

3. GENERAL PRODUCT SPECIFICATIONS

Dimensions: 5.3 x 4.0 x 1.375 inches
Weight: 1 lb

Voltage Supply: Standard Model: 40 to 270VDC
                                                   40 to 270VAC, 50/60Hz
               LV Model (Suffix "-LV"):   9 to 36VDC

Current Requirements:

12VDC	24VDC	125VDC	120VAC	220VAC
65mA	27mA	7.5mA	6.5mA	5.5mA

Surge Protection: Power Supply: 8kVrms
                        Analog Line: 3.75kVac
                        Digital Line: ESD ± 10kV

Operating Temperature: -40 to +85 deg C

Operating Humidity: 0 to 90% (non-condensing.)

Storage Temperature: -55 to 100 deg C

4.   MODEM SPECIFICATIONS

Modulation:	Bell202T
Modulation Type:	FSK
Synch/Async:	Synchronous or Asynchronous
Data Rate:	0 – 1200bps
Transmit Frequency:	Mark: 1200Hz
	Space: 2200Hz
Error Correction:	None
Data Compression:	None
Data Modulation Connectivity:	Using 16ms Polling Test

99.999% or better at -37dBm
99.5% or better at -40dBm
95% or better at -43dBm

Serial Formats and Flow Control:

Synchronous or Asynchronous and RTS/CTS flow control

Analog Interface

Tx Output Level:	-0 dBm or -10 dBm *
Rx Sensitivity:	-43dBm or -33dBm *
	-43dBm for constant carrier
	-40dBm for polling carrier
Line Termination:	Dip Switch Selectable *
Line Impedance:	600 ohms balanced
2 or 4 Wire Configuration:	Dip Switch Selectable *

Other Features

Receiver Equalization:	Compromise Equalization
Self Test Diagnostics:	None
Local Analog Loopback:	See Section 13
Local Digital Loopback:	See Section 13
Remote Analog Loopback	See Section 13
Remote Digital Loopback	See Section 13
Anti-Streaming:	OFF or 45 Seconds (± 5 sec) *
RTS/CTS delay:	1ms, 12ms, 35ms or 50ms (±5%) *
	Note: Soft Carrier will effect RTS/CTS delay time (see Dip Switch Settings ~ Section 8)
Constant Carrier	Switch Selectable ON or OFF
Soft Carrier Turn Off	20ms of 900Hz after RTS is turned Off
Carrier Turn ON/OFF	8ms ±0.5ms

* Dip Switch Selectable ~ See Section 9

5. ANALOG LINE SPECIFICATIONS

The MIU202T contains analog circuitry for connection to the public conditioned or unconditioned, Bell type 3002, 2 or 4-wire, full duplex voice grade leased lines or metallic lines (eg; pilot wires). The MIU202T will also interface to Power Line Carrier or Microwave radio voice channel networks.

The MIU202T has an RJ-11terminated connector. The following lists the MIU202T analog interfaces

Analog Line Type:

Conditioned or unconditioned, Bell type 3002, 2 or 4-wire, full duplex voice grade or metallic lines or better.

Analog Line Specifications:

Bandwidth	300 Hz to 3400 Hz ($\pm$3dB)
Impedance	600 / 900 ohms , balanced
Frequency Response	400 to 3000Hz ($\pm$2dB)
Receiver Input Level	-16dBm max.
Output Level	+7 dBm
Noise Signal Level	-48 dBmO

RJ11
Leased/Private Line
Connector

RX
TX
RX
6. ANALOG MICROWAVE INTERFACE

The MIU202Tis designed to interface to a Microwave radio voice channel network with the following specifications:

Phase Jitter (10 to 300Hz)1 degree peak-to-peak, max.

Frequency Response:	300 - 3400Hz -3, +0.7 dB
	400 - 3000Hz -1, +0.7 dB
	600 - 2400Hz $\pm$ 0.7 dB

Frequency Stability:	With Synchronization 0.1 Hz
	Without Synchronization 0.5 Hz / month

Level Stability (w/o regulation): $\pm$ 0.5 dB (6 months)

Harmonic Distortion:	1% max, 0.3 % typical
	(1Khz, 0 dBmO test tone)

Absolute Delay:	Option – 001: 1500 μsec, maximum
	Option – 002: 1900 μsec, maximum

Group Delay (option - 001):	600 - 3200 Hz 1200 μsec, maximum
	800 - 2800 Hz 550 μsec, maximum
	1000-2600 Hz 350 μsec, maximum

Group Delay (option - 002):	600 - 3200 Hz with 1000 μsec, maximum
	800 - 2800 Hz with 400 μsec, maximum
	1000-2600 Hz with 180 μsec, maximum

Linearity:	0.3 dB +3.5 dBmO

Limiting:	+7.5dBmO, max (+6.5 dBmO typical)
	for +20dBmO input

Crosstalk (intelligible)(1KhZ test tone at 0 dBmO):

|	
Inter-channel	65 dBmO maximum, 80 dBmO typical
Intra-channel	70 dBmO maximum

Crosstalk (unintelligible):

Adjacent channel   28dBrnc0 maximum (24 455B weighted
noise at 0 dBmO   dBrnc0 typical).

Intra-channel   28 dBrnc0, maximum (18 dBrnc0, typical)
(1KHz test tone at 0 dBmO)

Out of Band Signalling: Frequency 3825 Hz
Level -20 dBmO
Pulse speed (30 to 80% break) 8 to 14 pps
Pulse distortion ± 3 dB, level var. 3% max.
Signaling leak -60 dBmO, maximum

7. POWER CONNECTIONS
MIU2.4, MIU9.6, MIU9.6L, MIU14.4, MIU14.4L, MIU28.8, MIU202T, MIU9.6FP, MIU9.6FPD

3-Pin Connector Supplied with unit

AC live & neutral
DC +ve & -ve non-polarized

Ground

Black

Green

White

Connect to any AC or DC Voltage Source in the Range of 48V to 220V

MIU Models as above, but with suffix "-LV" (eg; MIU2.4-LV)

Power Ground

Frame Ground

Positive DC Voltage

Black

Green

White

Connect tor DC Voltage Source in the Range of 9.0V to 36VDC

3-Pin Connector Supplied with unit

IMPORTANT NOTES

1. Wire colors shown are for optional Telenetics cable, if ordered.

2. Customer supplied cable must be suitable for site environmental conditions.

3. Surge protection only guaranteed if ground wire >18 AWG

4. Solidly earthed ground connection required to guarantee surge protection

5. Screw terminals accept 28 to 16 AWG.

drb | mydocs | miumanual | power connections | 03/19/98

8. SERIAL DATA PORT PIN-OUTS

RS232C is the most commonly used serial data interface and defines the Physical, Functional and Electrical boundaries between two or more communicating devices

~ D-SHAPED SERIAL PORT CONNECTORS ~
are usually used to interconnect DTEs (computers, controllers, etc.) and DCEs (modems, converters, etc.)

DB9

DB25
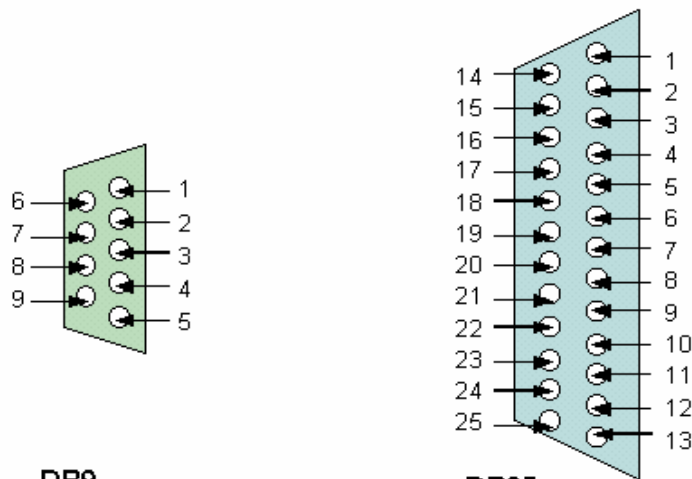

| Pin	Signal	Pin	Source
1	CD - Carrier Detect	8	MODEM
2	RXD - Receive Data	3	MODEM
3	TXD - Transmit Data	2	TERMINAL
4	DTR - Data Term'l Ready	20	TERMINAL
5	Signal Ground	7	N/A
6	DSR - Data Set Ready	6	MODEM
7	RTS - Ready to Send	4	TERMINAL
8	CTS - Clear to Send	5	MODEM
9	RI - Ring Indication (Dial Modems Only)	22	MODEM

For Synchronous Mode
6 TxDClk (was DSR)   15 TxDClk
9 RxDClk (was RI)   17 RxDClkl

9. DIP SWITCH FUNCTIONS
IMPORTANT NOTE: Invert modem to view dip switches as shown above

Table 1

Switch	Function	ON	OFF
Switch 1	Transmit Analog (TxA) Signal Level	0 dBm	-10 dBm
Switch 2	Anti-Streaming	45 secs	OFF
Switch 3	Received Analog (RxA) Signal Level	-33 dBm	-43 dBm
Switch 4	RTS/CTS Delay	See Table 2	
Switch 5	RTS/CTS Delay	See Table 2	
Switch 6	Switched/Constant Carrier	Constant Carrier	Switched Carrier (Follows RTS State)
Switch 7	2 or 4- Wire Selection	2-Wire	4-Wire
Switch 8	Line Termination	600 ohms	None
Switch 9	Soft Carrier (900Hz) Turn Off	ON	OFF
Switch 10	Spare		

Table 2: RTS/CTS Delay Time

| 2 Wire	4 Wire	Switched Carrier	Constant Carrier	Switch 4	Switch 5	Switch 9 Soft Carrier	RTS/CTS Delay Time
NO	YES	YES	YES	ON	ON	OFF	50 ms
YES	NO	YES	NO	ON	ON	ON	50 ms
NO	YES	YES	NO	ON	ON	ON	50 ms
YES	NO	YES	NO	ON	ON	OFF	50 ms
NO	YES	YES	YES	OFF	ON	OFF	35 ms
NO	YES	YES	NO	OFF	ON	ON	35 ms
YES	NO	YES	NO	OFF	ON	ON	35 ms
YES	NO	YES	NO	OFF	ON	OFF	35 ms
NO	YES	YES	YES	ON	OFF	OFF	12 ms
NO	YES	YES	NO	ON	OFF	ON	35 ms
YES	NO	YES	NO	ON	OFF	ON	12 ms
YES	NO	YES	NO	ON	OFF	OFF	12 ms
NO	YES	NO	YES	OFF	OFF	OFF	1 ms
NO	YES	YES	NO	OFF	OFF	OFF	12 ms
NO	YES	YES	NO	OFF	OFF	ON	1 ms
YES	NO	YES	NO	OFF	OFF	OFF	1 ms
YES	NO	YES	NO	OFF	OFF	ON	1 ms
10. MODEM CONFIGURATION

The following table provides the Dip Switch settings required for most modem application configurations:

	Dip Switch Setting								
	1	2	3	4	5	6	7	8	9
4-Wire Point-to-Point	ON		ON			ON		ON	
4-Wire Multi-Point Master	ON		ON			ON		ON	
4-Wire Multi-Point Slave Rx Term. OFF	ON	ON	ON	ON					ON
4-Wire Multi-Point Slave Rx Term. ON	ON	ON	ON	ON				ON	ON
2-Wire Point-to-Point	ON	ON	ON	ON			ON	ON	ON
2-Wire Multi-Point Master Line Term. ON	ON	ON	ON		ON		ON	ON	ON
2-Wire Multi-Point Slave Line Term. ON	ON	ON	ON		ON		ON	ON	ON
2-Wire Multi-Point Slave Line Term. OFF	ON	ON	ON		ON		ON		ON

For clarity, a blank space = OFF

13. DIAGNOSTICS

The following pages provide hardware techniques for diagnosing communication problems and thereby isolating the problem at the local modem, the remote modem or the interconnecting line.

(a) LOCAL ANALOG LOOPBACK (Figure 2)

Requires a loop back cable with a built-in circuit for line loss to simulate a typical leased line condition (See Figure 3).

Connect the loop back cable to the RJ11 connector on the modem under test.

Set Dip Switches as follows…

Switch 7 = OFF	4-Wire
Switch 9 = ON	Soft Carrier Turn Off Enabled
Switch 1 = ON	Transmit (TxA) Signal Level = 0dBm
Switch 3 = ON	Receive (RxA) Signal Level = –33dBm
Switch 6 = OFF	Switched Carrier
Switch 4&5 = ON	RTS/CTS Delay = 50ms

Test 1: RTS/CTS Analog Control

Set RTS "ON" and check that CD (Carrier Detect) turns "ON".

Turn RTS "OFF" and ensure that CD turns "OFF"

With RTS "ON", run a test message at TxD and verify that the same message is received at RxD with no data errors.

Test 2: Transmit Signal Power & Receive Levels

Set Dip Switch 1 OFF (TxA = -10dBm)

CD will be OFF.

Change Dip Switch 1 to ON (TxA = 0dBm)

CD should now be ON.

Test 3: Received Signal Level

Set Dip Switch 1 OFF (TxA = -10dBm) and Dip Switch 3 OFF (RxA = -43dBm).

CD will be ON.

Run a test message at TxD and verify that the same message is received at RxD with no data errors.

Test 4: Repeat Test 3 for various RTS/CTS delay times and with soft carrier ON and OFF.

(b) LOCAL DIGITAL LOOPBACK – 4/Wire Network (Figure 4)

On the modem under test, connect TxD to RxD

Switch 1 = ON (TxA = 0dBm)
Switch 3 = ON (RxA = -33dBm)
Switch 4 = OFF (RTS/CTS = 35ms)
Switch 5 = ON   (RTS/CTS = 35ms)
Switch 6 = ON (Constant Carrier mode).
Switch 7 = OFF (4-Wire)
Switch 8 = ON (Line Termination = 600 ohms)
Switch 9 = ON (Soft Carrier = ON)

Transmit a test message from a remote modem and confirm that the same message is received back at RxD on the remote modem with no data errors.

(c) REMOTE DIGITAL LOOPBACK – 4/Wire Network (Figure 5)

Configure both the local and remote modems as follows:

Switch 1 = ON (TxA = 0dBm)
Switch 3 = ON (RxA = -33dBm)
Switch 4 = OFF (RTS/CTS = 35ms)
Switch 5 = ON   (RTS/CTS = 35ms)
Switch 6 = ON (Constant Carrier mode).
Switch 7 = OFF (4-Wire)
Switch 8 = ON (Line Termination = 600 ohms)
Switch 9 = ON (Soft Carrier Turn Off = ON)

Connect TxD to RxD at the remote modem.

Transmit a test message from the local modem and confirm that the same message is received back at RxD on the local modem with no data errors.

MIU202T-S Installation, Operation & Diagnostics   Edition: March 16, 1999   Page 19

(d) LINE DIAGNOSTICS

(i) Typical modem configuration for **4-wire Point-to-Point** system…

   Switch 1 = ON (TxA = 0dBm)
   Switch 3 = ON (RxA = -33dBm)
   Switch 4 = OFF (RTS/CTS = 1ms)
   Switch 5 = OFF (RTS/CTS = 1ms)
   Switch 6 = ON (Constant Carrier mode).
   Switch 7 = OFF (4-Wire)
   Switch 8 = ON (Line Termination = 600 ohms)
   Switch 9 = OFF (Soft Carrier = OFF)

(ii) Typical modem configuration for **4-wire Multi-Point** system…

   Switch 1 = ON (TxA = 0dBm)
   Switch 3 = ON (RxA = -33dBm)
   Switch 4 = OFF (RTS/CTS = 1ms)
   Switch 5 = OFF (RTS/CTS = 1ms)
   Switch 6 = ON (Constant Carrier mode).
   Switch 7 = OFF (4-Wire)
   Switch 8 = ON (Line Termination = 600 ohms)
   Switch 9 = OFF (Soft Carrier = OFF)

Adjustments…

In a network with high line loss (greater than 16dB) change Switch 3 (RxA) to OFF (-43dBm).

If there are conditions that can cause cross-talk (TxA leaking into RxA path) set Switch 1 (TxA) to OFF (-10dBm).

Note that noise level should be –50dBm or lower for most FSK operation (signal-to-noise ratio of 15dB or higher)
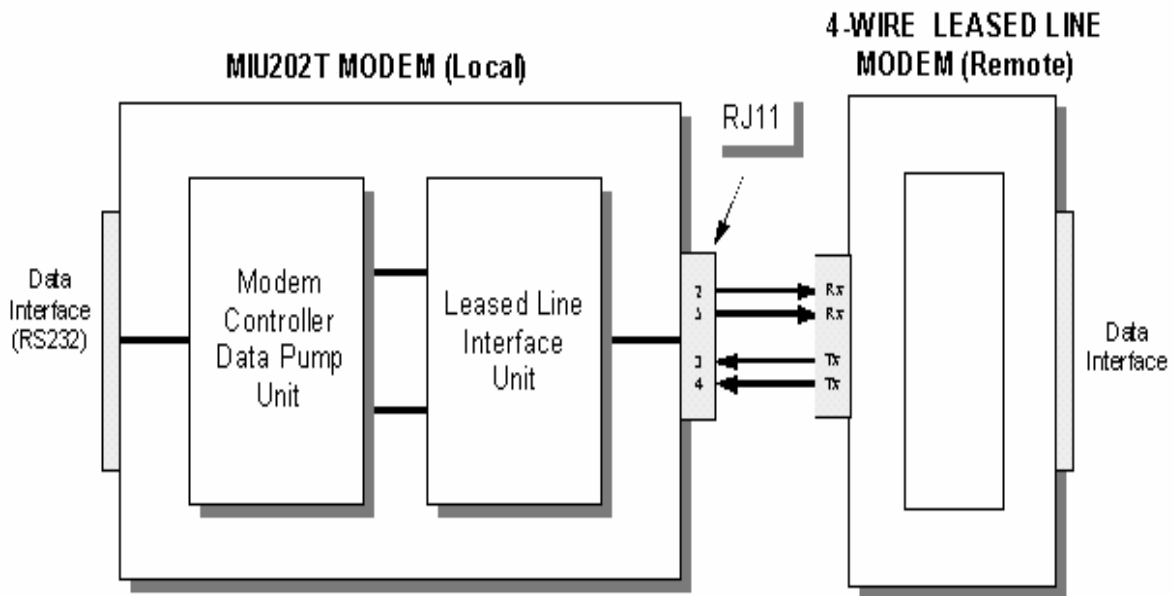

Figure 1   TYPICAL 4-WIRE LEASED LINE MODEM CONFIGURATION
