PRELIMINARY

22AV600U

The AV600 series provides big features in a small package. With DynaLight™, Gaming Mode, and PC Input, this multi-purpose TV will increase your TV, PC, and video game enjoyment.

DynaLight™ Dynamic Backlight – Utilizes advanced histogram image processing to monitor the brightness level of each video frame and automatically adjusts the backlight intensity based on the image content. This precise signal analysis allows for 256 levels of backlight control and can create a Dynamic Contrast that is 7 to 10 times that of the original panel contrast. The result is a powerful picture with deep blacks for increased detail and incredible depth.

Gaming Mode – Enhances the gaming experience by reducing game controller delay. The Gaming Mode allows the video signal to bypass select picture circuitry to shorten the overall signal to screen time. This provides an approximate 33 millisecond response improvement for 60 Hertz models and 48 millisecond response improvement for 120 Hertz models virtually eliminating controller delay.

Native Mode™ – Displays the 3% to 5% of the image that is generally lost during the normal over-scanning that is done in most TVs. None of the picture is lost, allowing you to see the action faster and stay in the game. On 1080p models, it also eliminates unnecessary scaling of Full HD signals that can reduce overall image resolution and therefore picture quality.

ENERGY STAR® – Endorsement means a product meets strict energy efficiency guidelines set by the US Environmental Protection Agency and the Department of Energy. Toshiba is committed to playing a leading role in helping establish a sustainable society.
