TOSHIBA AMERICA INFORMATION SYSTEMS, INC. ("TAIS")

Telecommunication Systems Division License Agreement

IMPORTANT: THIS LICENSE AGREEMENT ("AGREEMENT") IS A LEGAL AGREEMENT BETWEEN YOU ("YOU") AND TAIS. CAREFULLY READ THIS LICENSE AGREEMENT. USE OF ANY SOFTWARE OR ANY RELATED INFORMATION (COLLECTIVELY, "SOFTWARE") INSTALLED ON OR SHIPPED WITH A TAIS TELECOMMUNICATION SYSTEM PRODUCT OR OTHERWISE MADE AVAILABLE TO YOU BY TAIS IN WHATEVER FORM OR MEDIA, WILL CONSTITUTE YOUR ACCEPTANCE OF THESE TERMS, UNLESS SEPARATE TERMS ARE PROVIDED BY THE SOFTWARE SUPPLIER. IF YOU DO NOT AGREE WITH THE TERMS OF THIS LICENSE AGREEMENT, DO NOT INSTALL, COPY OR USE THE SOFTWARE AND PROMPTLY RETURN IT TO THE LOCATION FROM WHICH YOU OBTAINED IT IN ACCORDANCE WITH APPLICABLE RETURN POLICIES. EXCEPT AS OTHERWISE AUTHORIZED IN WRITING BY TAIS, THIS SOFTWARE IS LICENSED FOR DISTRIBUTION ONLY TO END-USERS PURSUANT TO THIS LICENSE AGREEMENT.

- License Grant.** The Software is not sold; it is licensed upon payment of applicable charges. TAIS grants to you a personal, non-transferable and non-exclusive right to use the copy of the Software provided under this License Agreement. You agree you will not copy the Software except as necessary to use it on one TAIS system at a time at one location. Modifying, translating, renting, copying, distributing, transferring or assigning all or part of the Software, or any rights granted hereunder, to any other persons and removing any proprietary notices, labels or marks from the Software is strictly prohibited; You agree violation of such restrictions will cause irreparable harm to TAIS and provide grounds for injunctive relief, without notice, against You or any other person in possession of the Software. You and any other person whose possession of the software violates this License Agreement shall promptly surrender possession of the Software to TAIS, upon demand. Furthermore, you hereby agree not to create derivative works based on the Software. TAIS reserves the right to terminate this license and to immediately repossess the software in the event that You or any other person violates this License Agreement.
- Intellectual Property.** You acknowledge that no title to the intellectual property in the Software is transferred to you. You further acknowledge that title and full ownership rights to the Software will remain the exclusive property of TAIS and/or its suppliers, and you will not acquire any rights to the Software, except the license expressly set forth above. You will not remove or change any proprietary notices contained in or on the Software. The Software is protected under US patent, copyright, trade secret, and/or other proprietary laws, as well as international treaties. Any transfer, use, or copying of the software in violation of the License Agreement constitutes copyright infringement. You are hereby on notice that any transfer, use, or copying of the Software in violation of this License Agreement constitutes a willful infringement of copyright.
- No Reverse Engineering.** You agree that you will not attempt, and if you employ employees or engage contractors, you will use your best efforts to prevent your employees and contractors from attempting to reverse compile, reverse engineer, modify, translate or disassemble the Software in whole or in part. Any failure to comply with the above or any other terms and conditions contained herein will result in the automatic termination of this license and the reversion of the rights granted hereunder back to TAIS.
- Limited Warranty.** THE SOFTWARE IS PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND. TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, TAIS AND ITS SUPPLIERS DISCLAIM ALL WARRANTIES WITH REGARD TO THE SOFTWARE, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE WARRANTY OF NON-INFRINGEMENT OF THIRD PARTY RIGHTS, THE WARRANTY OF YEAR 2000 COMPLIANCE, AND THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE SOFTWARE IS WITH YOU. NEITHER TAIS NOR ITS SUPPLIERS WARRANT THAT THE FUNCTIONS CONTAINED IN THE SOFTWARE WILL MEET YOUR REQUIREMENTS OR THAT THE OPERATION OF THE SOFTWARE WILL BE UNINTERRUPTED OR ERROR-FREE. HOWEVER, TAIS WARRANTS THAT ANY MEDIA ON WHICH THE SOFTWARE IS FURNISHED IS FREE FROM DEFECTS IN MATERIAL AND WORKMANSHIP UNDER NORMAL USE FOR A PERIOD OF NINETY (90) DAYS FROM THE DATE OF DELIVERY TO YOU.
- Limitation of Liability.** TAIS' ENTIRE LIABILITY AND YOUR SOLE AND EXCLUSIVE REMEDY UNDER THIS LICENSE AGREEMENT SHALL BE AT TAIS' OPTION REPLACEMENT OF THE MEDIA OR REFUND OF THE PRICE PAID. TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, IN NO EVENT SHALL TAIS OR ITS SUPPLIERS BE LIABLE TO YOU FOR ANY CONSEQUENTIAL, SPECIAL, INCIDENTAL OR INDIRECT DAMAGES FOR PERSONAL INJURY, LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, LOSS OF BUSINESS INFORMATION/DATA, OR ANY OTHER PECUNIARY LOSS OF ANY KIND ARISING OUT OF THE USE OR INABILITY TO USE THE SOFTWARE, EVEN IF TAIS OR ITS SUPPLIER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN NO EVENT SHALL TAIS OR ITS SUPPLIERS BE LIABLE FOR ANY CLAIM BY A THIRD PARTY.
- State/Jurisdiction Laws.** SOME STATES/JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES OR LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY MAY LAST, OR THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO SUCH LIMITATIONS OR EXCLUSIONS MAY NOT APPLY TO YOU. THIS LIMITED WARRANTY GIVES YOU SPECIFIC RIGHTS AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE/JURISDICTION TO STATE/JURISDICTION.
- Export Laws.** This License Agreement involves products and/or technical data that may be controlled under the United States Export Administration Regulations and may be subject to the approval of the United States Department of Commerce prior to export. Any export, directly or indirectly, in contravention of the United States Export Administration Regulations, or any other applicable law, regulation or order, is prohibited.
- Governing Law.** This License Agreement will be governed by the laws of the State of California, United States of America, excluding its conflict of law provisions.
- United States Government Restricted Rights.** The Software is provided with Restricted Rights. Use, duplication, or disclosure by the United States Government, its agencies and/or instrumentalities is subject to restrictions as set forth in subparagraph (c)(1)(ii) of The Rights in Technical Data and Computer Software Clause at DFARS 252.227-7013 (October 1988) or subparagraphs (c)(1) and (2) of the Commercial Computer Software - Restricted Rights at 48 CFR 52.227-19, as applicable.
- Severability.** If any provision of this License Agreement shall be held to be invalid, illegal or unenforceable, the validity, legality and enforceability of the remaining provisions hereof shall not in any way be affected or impaired.
- No Waiver.** No waiver of any breach of any provision of this License Agreement shall constitute a waiver of any prior, concurrent or subsequent breach of the same or any other provisions hereof, and no waiver shall be effective unless made in writing and signed by an authorized representative of the waiving party.

YOU ACKNOWLEDGE THAT YOU HAVE READ THIS LICENSE AGREEMENT AND THAT YOU UNDERSTAND ITS PROVISIONS. YOU AGREE TO BE BOUND BY ITS TERMS AND CONDITIONS. YOU FURTHER AGREE THAT THIS LICENSE AGREEMENT CONTAINS THE COMPLETE AND EXCLUSIVE AGREEMENT BETWEEN YOU AND TAIS AND SUPERSEDES ANY PROPOSAL OR PRIOR AGREEMENT, ORAL OR WRITTEN, OR ANY OTHER COMMUNICATION RELATING TO THE SUBJECT MATTER OF THIS LICENSE AGREEMENT.

Toshiba America Information Systems, Inc. Telecommunication Systems Division

Limited Warranty

Toshiba America Information Systems, Inc., ("TAIS") warrants that this telephone equipment (except for fuses, lamps, and other consumables) will, upon delivery by TAIS or an authorized TAIS dealer to a retail customer in new condition, be free from defects in material and workmanship for twenty-four (24) months after delivery. This warranty is void (a) if the equipment is used under other than normal use and maintenance conditions, (b) if the equipment is modified or altered, unless the modification or alteration is expressly authorized by TAIS, (c) if the equipment is subject to abuse, neglect, lightning, electrical fault, or accident, (d) if the equipment is repaired by someone other than TAIS or an authorized TAIS dealer, (e) if the equipment's serial number is defaced or missing, or (f) if the equipment is installed or used in combination or in assembly with products not supplied by TAIS and which are not compatible or are of inferior quality, design, or performance.

The sole obligation of TAIS or Toshiba Corporation under this warranty, or under any other legal obligation with respect to the equipment, is the repair or replacement by TAIS or its authorized dealer of such defective or missing parts as are causing the malfunction with new or refurbished parts (at their option). If TAIS or one of its authorized dealers does not replace or repair such parts, the retail customer's sole remedy will be a refund of the price charged by TAIS to its dealers for such parts as are proven to be defective, and which are returned to TAIS through one of its authorized dealers within the warranty period and no later than thirty (30) days after such malfunction, whichever first occurs.

Under no circumstances will the retail customer or any user or dealer or other person be entitled to any direct, special, indirect, consequential, or exemplary damages, for breach of contract, tort, or otherwise. Under no circumstances will any such person be entitled to any sum greater than the purchase price paid for the item of equipment that is malfunctioning.

To obtain service under this warranty, the retail customer must bring the malfunction of the machine to the attention of one of TAIS' authorized dealers within the twenty-four (24) month period and no later than thirty (30) days after such malfunction, whichever first occurs. Failure to bring the malfunction to the attention of an authorized TAIS dealer within the prescribed time results in the customer being not entitled to warranty service.

THERE ARE NO OTHER WARRANTIES FROM EITHER TOSHIBA AMERICA INFORMATION SYSTEMS, INC., OR TOSHIBA CORPORATION WHICH EXTEND BEYOND THE FACE OF THIS WARRANTY. ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND FITNESS FOR USE, ARE EXCLUDED.

No TAIS dealer and no person other than an officer of TAIS may extend or modify this warranty. No such modification or extension is effective unless it is in writing and signed by the vice president and general manager, Telecommunication Systems Division.

Appendix A – Centrex Application

Introduction

This user guide describes how to use the 3000-series and 2000-series digital phones for Strata CTX systems. Also discussed are Digital Add-on Modules (DADMs) and the Direct Station Selection (DSS) Console.

Organization

- **Chapter 1 – The Grand Tour** provides an overview of the digital telephones.
- **Chapter 2 – The Basics** covers the basic telephone features that you need to know.
- **Chapter 3 – Advanced Operation** includes an explanation of Soft Key operations. Features are presented alphabetically and, when applicable, include LCD information.
- **Chapter 4 – DKT3014 LCD Features** explains how to use the DKT3014-SDL features. It also includes a guide to the Strategy ES voice mail Soft Keys.
- **Chapter 5 – User Programming** provides instructions on programming Flexible Button features, setting One Touch buttons, changing Personal Speed Dial numbers and other user programmable functions.
- **Chapter 6 – DADM/DSS Console** explains how to use these consoles with the digital telephone.
- **Appendix A – Centrex Application** describes the Centrex features which may be available with your Strata CTX system.
- **Appendix B – Button Labels** lists the feature button designations of the 3000-series digital telephone models.

How to Use This Guide

This guide provides in-depth instructions for the DKT3000- and DKT2000-series digital telephones and their features. Most telephone users can use the “*Strata CTX 3000/2000-series Digital Telephone Quick Reference Guide*” instead of this guide.

Conventions

Conventions	Description
Note	Elaborates specific items or references other information. Within some tables, general notes apply to the entire table and numbered notes apply to specific items.
Important!	<i>Calls attention to important instructions or information.</i>
Extension Number	<p>Press to answer a call to the Extension Number. Each station can have multiple extension buttons. Incoming calls ring the extension button(s) from the top down. For example, station 10's extensions ring 10-1 first, then 10-2, 10-3, and 10-4. A station is considered busy when all extensions are being used.</p> <p>Note The naming convention for DKT assignments within Toshiba is Directory Numbers. For clarity and ease of understanding, the terms Extension Number and Phantom Extension Number will be used in this document in lieu of PDN and PhDN.</p>
Arial Bold	Represents telephone buttons.
+	<p>shows a multiple PC keyboard or telephone button entry. Entries without spaces between them show a simultaneous entry. Example: Delete+Enter.</p> <p>Entries with spaces between them show a sequential entry. Example: # + 5.</p>
Tilde (~)	Means “through.” Example: 350~640 Hz frequency range.

Conventions	Description
See Figure 10	Grey words within the printed text denote cross-references. In the electronic version of this document (Library CD-ROM or FYI Internet download), cross-references appear in blue hypertext.

Related Documents/Media

Note Some documents listed here may appear in different versions on the CD-ROM or in print. To find the most current version, check the version/date in the Publication Information on the back of the document's title page.

Refer to the following for more information:

- Strata CTX 3001/2001 Digital Single Line Telephone Guide
- Strata CTX 3000/2000-series Digital Telephone Quick Reference Guide
- Strata CTX WinAdmin Application Software and Documentation Library

Introduction

Related Documents/Media

This chapter familiarizes you with DKT3000-series and DKT2000-series digital speakerphones (model numbers appear on the bottom of your telephone).

DKT3000-series Telephones

The DKT3000-series models include:

- DKT3010-S 10-button
- DKT3020-S 20-button (shown on the next page)
- DKT3010-SD 10-button with two-line by 24-character LCD
- DKT3020-SD 20-button with two-line by 24-character LCD
- DKT3014-SDL 14-button with eight-line by 24-character tilting LCD and 16 Soft Key buttons (shown on [page 57](#))

All of the above Toshiba speakerphones enable you to place and receive calls without lifting the handset.

Toshiba LCD telephones provide easy access to frequently-used features. Prompts guide you through specific tasks. They also provide Outside Line Identification, User Name/Number, Call Duration, Date/Time of Day displays, and the ability to display names and telephone numbers of outside, incoming callers.

The DKT3001 single line digital telephone is also available - see the *Strata CTX 3001/2001 Digital Single Line Telephone User Guide* for more details.

The Grand Tour

DKT3000-series Telephones

DKT3020-SD Telephone

Fixed Buttons

The fixed buttons on your dial pad enable you to perform standard functions quickly and easily. These buttons are described in [Chapter 2 – The Basics](#).

Flexible Buttons

Your telephone can have 10, 14, or 20 Flexible Buttons (shown in the illustration on the previous page) that can be programmed to do many button functions, including:

- **Line** is used to access an outside line.
- **Primary Extension** is your extension button.
- **Pooled Line Group** enables you to access available outside lines from a group of lines appearing under one button.
- **Feature Access Buttons** enables you to store features onto a single button.
- **One Touch Buttons** are used for storing Speed Dial numbers or feature access code sequences onto a single button.

Note See [Table 12 on page 83](#) for a complete list of Feature Access Buttons and One Touch Buttons.

Liquid Crystal Display

Your Liquid Crystal Display (LCD) (shown right) shows:

- Desk Clock and Calendar in idle mode
- Call Duration during an outside call
- Operational, Advisory, and Notification messages

LCD Control Buttons

There are two types of LCD button functions: LCD Control Buttons and Soft Keys. The DKT3000-series LCD Control Buttons consist of **Mode**, **Page**, **Scroll** and **Feature**.

When the Soft Key prompts appear on the LCD, the LCD Control Button just below the prompt offers access to that feature. See [“Using Your LCD” on page 19](#) for more information.

- **Mode** is generally used as a Soft Key.
- Pressing **Page** switches you from the Call Forward (CF) display to the User Name display.
- Pressing **Scroll** advances you through information.
- **Feature** will be used in the future.

DKT2000-series Telephones

The following speakerphone models belong to the 2000-series:

- DKT2010-S 10-button speakerphone
- DKT2010-SD 10-button with LCD
- DKT2020-S 20-button
- DKT2020-SD 20-button with LCD (shown below)
- DKT2020-FDSP 20-button with LCD and External Microphone jack
- DKT2001 (See the *Strata CTX DKT3001/2001 Digital Single Line Telephone User Guide*).

An illustration of the DKT2020-SD is shown on the next page.

DKT2020-SD Telephone

Fixed Buttons

The fixed buttons on your telephone enable you to perform standard functions quickly and easily. These buttons are described in [Chapter 2 – The Basics](#).

Flexible Buttons

All Flexible Buttons must be programmed for your telephone in system programming and vary for individual telephones. If a button does not appear on your display or telephone keypad label, see your CTX System Administrator for button assignments.

Line Buttons

You may have buttons designated as **Line** and/or **Pooled Line Grp** which enable you to directly access outside lines. **Pooled Line Grp** enables you to access available CO Lines from a group of lines appearing under one button.

Liquid Crystal Display

Your Liquid Crystal Display (LCD) (shown right) shows:

- Desk Clock and Calendar in idle mode
- Call Duration during an outside call
- Operational, Advisory, and Notification messages

Important! *The LCD width of the DKT2000-series telephones is shorter than the DKT3000-series LCDs. This difference causes some features to display differently.*

LCD Control Buttons

There are two types of LCD button functions: LCD Control Buttons and Soft Keys. The DKT2000-series LCD Control Buttons consist of **Mode**, **Page** and **Scroll**.

When the Soft Key prompts appear on the LCD, the LCD Control Button just below the prompt offers access to that feature. See [“Using Your LCD” on page 19](#) for more information.

- **Mode** is generally used as a Soft Key.
- Pressing **Page** switches you from the Call Forward (CF) display to the User Name display.
- Pressing **Scroll** advances you through information.

This chapter shows you the basic operation of your DKT3000-series or DKT2000-series telephone.

Important! *The text in this chapter applies to both the DKT3000-series and DKT2000-series telephones, unless otherwise noted.*

Important - Read First

Be sure to check with your CTX System Administrator and make sure you know which features are enabled on your system. Use the check boxes throughout this book to mark which features you have.

Note LEDs on your telephone flash at different speeds depending on the function performed. Flash rates can be found under [“LED Indicator Details” on page 73](#).

What’s My Line?

Throughout this guide, the word “Line” is mentioned. For example, you will be instructed to “select a Line.” “Line” can be:

- Line button
- Pooled Line Group button
- Group Line button
- Line out requiring an access code - where you enter an outside line or line group access code (for example, dialing **9** to get an outside line).

Check mark which Line type you have, then use that selection when instructed to “select a Line.”

Which Outgoing/Incoming Call Features Do I Have?

Check mark here which outgoing/incoming features you have on your system.

- Automatic Line Selection (ALS):** When making *outgoing* calls, you have ALS if when you lift the handset or press **Spkr** you hear dial tone and the Line Light Emitting Diode (LED) lights steady green. The LCD displays the station number and the seized outside line.
- Ringing Line Preference:** You answer an *incoming* line ringing your station by lifting the handset or pressing **Spkr**. You do not have to press an extension button to answer.
- Tone Signaling:** Internal *incoming* call – you hear successive ring tones, then lift the handset or press **Spkr** to answer the call.
- Voice First Signaling:** Internal *incoming* call – your telephone does not ring; instead you hear a long tone, then the caller’s voice. Talk in the direction of your telephone, or answer the call as you normally would by lifting the handset or pressing **Spkr**.
- Switching Signaling:** Check with your CTX System Administrator to see if you have the ability to change between Tone and Voice Signaling on a call-by-call basis. If you do, you can press **1** after dialing an internal telephone number to change the signaling.
- Hot Dialing:** If your telephone is programmed for “hot dialing,” you do not have to press **Spkr** or lift the handset before dialing internal or external speakerphone calls. When you dial a number, the speakerphone automatically turns on and the Spkr and Mic LEDs light.

Making a Call

There are three ways to originate a call from your digital telephone:

Hot Dialing

1. To make a call using Hot Dialing, dial the number.

When you start to dial, the extension button, Spkr and Mic LEDs light. Digits display as they are dialed. Call progress tones (Ringback Tone, Busy Tone, etc.) play through the speaker.

2. When connected, you can continue speakerphone operation or lift the handset and continue the conversation.

Spkr Button

1. To make a call, press **Spkr**.

A line may be automatically selected or you can manually choose a line. Your extension or **Line** button lights (depending on system programming). Dial tone plays through the speaker. The Spkr and Mic LEDs light.

2. Dial the number.

Digits display as they are dialed. Call progress tones (Ringback Tone, Busy Tone, etc.) play through the speaker.

3. When connected, you can continue to use the speakerphone or lift the handset and continue the conversation.

Handset

1. To make a call, lift the handset, then dial the number.

A line may be automatically selected or you can manually choose a line. Dial tone plays through the handset. The Spkr and Mic LEDs do *not* light.

Digits display as they are dialed. Call progress tones (Ringback Tone, Busy Tone, etc.) are heard through the handset.

2. When connected, you can continue to use the handset or switch to speakerphone by holding down **Spkr** and replacing the handset.

Answering a Call

There are several ways to answer a call:

Handset

- If your telephone is programmed for Ringing Line Preference, pick up the handset and the telephone automatically answers the ringing line.
- If not, press the button associated with the ringing line (flashing green LED).

Speaker

- If your telephone is programmed for Ringing Line Preference, press **Spkr** and the telephone automatically answers the ringing line.
- If not, press the button associated with the ringing line (flashing green LED). Once connected, you can continue on the speakerphone or lift the handset.

Handsfree Answerback

If you have a speakerphone, it may be programmed for Handsfree Answerback. You hear a single long tone, followed by the caller's voice. The extension LED flashes green (incoming call). The Mic LED lights steady red (microphone is active). The Spkr LED flashes red.

1. Do not lift the handset; speak toward the telephone in a normal voice.
2. Press **Spkr** or take the handset off-hook before transferring the call or placing it on hold.

Switching Between Handset and Speakerphone

- Press **Spkr** and place the handset on-hook to switch from handset to speakerphone mode.
- Take the handset off-hook to switch from speakerphone to handset mode.

Message Waiting

Use your **Msg** LED/button and LCD to see/retrieve message(s).

An extension can receive up to four simultaneous Message Waiting indications and LCD messages. One message is reserved for the Message Center.

Your telephone can be programmed to have up to four additional (flexible) Message Waiting buttons/LEDs. Check with your CTX System Administrator to see if these buttons have been programmed on your telephone. If so, substitute them when the **Msg** button/LED is mentioned in the following steps.

Responding to a Lit Msg LED

1. On an LCD telephone, if you see a “+,” press **Scroll** to display additional messages; otherwise, go to Step 2. The “+” indicates additional messages. The LCD can show up to three station messages for your extension and three for each additional (phantom) extension that you may have.
2. Press **Msg**, then lift the handset. Your telephone rings the extension or voice mail device that sent the indication. The LED continues to flash red.
3. After answering the message(s), place the handset back on-hook.
4. If the Msg LED continues to flash, you have more messages; repeat Steps 1~3 above to retrieve them. Voice mail devices turn off the LED/LCD indications after a short delay, after you checked all messages.
5. To manually turn off your Msg LED, press your extension button, then press **#409**. Do this step for each message received.

Turning On/Off Message Waiting LED on Another Extension

If you call an extension and it's busy or there is no answer, you can light that extension's Message Waiting LED and enable that extension to call you back.

1. Dial an internal extension. You hear busy tone or there's no answer.
2. Press **Msg** or **7**. The Msg LED flashes red on the called telephone. At your telephone, the Msg LED lights steady red and the LCD shows the station number where you set a Message Waiting light.
3. Press **Spkr**. Your Msg LED turns Off. The Msg LED on the called telephone flashes until the called party presses the flashing **Msg** button - which calls you back.
4. To turn Off a Message LED that you have set on another extension, press **#64** plus the extension number that has the message light set. Then hang up to release your telephone.

Microphone

- To turn the Microphone On/Off when the speakerphone is active (Spkr LED is On), press **Mic**.

When the Microphone is On, the Mic LED is On, steady red. When the microphone is Off, the Mic LED is Off and you cannot be heard through the microphone.

The microphone and its LED are always On when you receive a Voice-first internal call and Off when you receive a Ring-first call.

Each station's microphone can be set in system programming to:

- switch On/Off with one touch
 - switch Off only while pressed and held
 - either On/Off at the start of handsfree dialing.
- To talk back to a Handset Off-hook Call Announce call, press and hold **Mic** and talk over your telephone handset/headset. The LED and microphone remain Off.

Call Transfer

1. While on a call, press **Cnf/Trn**. Your Line LED flashes green and you hear internal dial tone.
2. Dial the extension where the call will be transferred. You can remain on the line and announce the call or immediately “blind transfer” the call.

During call transfer, you can connect all three parties by pressing your flashing extension button or **Cnf/Trn**.

- If you get voice mail, you can leave a message or hang up and let the transferred caller leave a message.
 - If you hear a long single tone, then announce the call over the called telephone’s speaker.
3. Transfer with Camp On: If the station to which you want to transfer the call is busy, you may hang up and the transferred trunk or station will be camped on to the busy destination.

► To transfer a call directly to Voice Mail (VM)

1. While on a call, press **Cnf/Trn**.
2. Enter **#407**.
3. Enter the VM mailbox number (usually the same as the extension number) + **#**.
4. Hang up and the caller is connected to the VM mailbox. This feature does a blind transfer to VM.

► To perform Call Transfer Immediate

1. While on a call, press the **TRNS** Soft Key. The DKT3014 LCD shows “TRANSFER.”
2. Dial the extension where you wish to transfer the call. The call rings the destination station and your telephone returns to the idle state.

Conference Calls

You can conference together up to eight parties (including your own) - with up to six parties being external network lines. The actual number of conference parties with acceptable volume levels depends on the local and far end telephone line conditions.

The person who initiates the conference call is the Master. If, after the conference is established and the Master exits the conference, the first station to have been added to the conference becomes the Master.

► To conference calls

1. While on a call, press **Cnf/Trn**. You hear dial tone and your Line LED flashes green.
2. Call another station or outside line.
3. When the called party answers, press **Cnf/Trn**. If you receive a busy tone or no answer, press **Cnf/Trn** again to return to the original connection.

All parties are conferenced. If the second call was placed on a **Line** that appears on your telephone, the LED also flashes green.

4. Repeat the above steps to add lines to the conference. Keep in mind the maximum number of allowed conference parties.

Note When the “master” of the conference hangs up, the control is automatically transferred to the first internal station added to the conference call. If no other internal stations are included in the conference call, the call will be disconnected.

► To transfer conference control

1. Do Steps 1 and 2 above to add the line to which you wish to transfer conference control. See previous Note.
2. Announce the call and hang up to transfer it. This station now becomes the conference “master” with the ability to add or delete parties.

► To hold a conference call

- If you are the Conference Master, press the **Hold** key once (or twice for Executive Hold) to place the conference call on hold. The other parties can continue with the conference. Music-on-hold is suppressed and your extension LED flashes green. You can rejoin the conference at any time by pressing your extension button. When you return, you retain Master status.

Adding Voice Mail to a Conference

The Conference Master can add voice mail to a conference. This feature enables participants in a conference to listen to or leave a voice mail message during one telephone call.

► To add Voice Mail to a conference call (performed by Conference Master)

1. Press **Cnf/Trn** to place the current call on Consultation Hold.
2. Dial the voice mail (VM) extension number, then enter the VM mailbox and security code. This adds the voice mailbox to the conference.
3. Press **Cnf/Trn** to reconnect to the original party. (You can continue to add conference members by pressing **Cnf/Trn** and dialing another extension.)

Now, all parties in the conference can listen to or record a message to this voice mailbox. Only the Master can control the VM with touchtones or Soft Keys.

Connecting Two Outside Lines

1. While talking on an outside call, press **Cnf/Trn**. You hear dial tone. The extension LED flashes (conference rate).
2. Dial an outside line access code and outside telephone number.
3. After the party answers, press **Cnf/Trn**. The extension LED flashes (in-use rate) and all parties are conferenced.

If you receive a busy tone or if the station does not answer, press the flashing extension button to return to the original connection, press **Cnf/Trn**.

4. Hang up. The extension LED flashes (exclusive-hold rate) and the two lines are connected. The LED turns Off when the parties hang-up.
5. To supervise a tandem call, press the extension button. If the parties have finished, hang up...or if the parties are still talking, press **Cnf/Trn** and hang-up. Both Line LEDs turn Off and the connection is released.

If your telephone company provides auto disconnect, the connection may release automatically when the parties hang up. If not, the lines must be supervised to be disconnected.

Hold

1. To place a call on hold, press **Hold**. Your LCD shows the line on hold. The held Line's LED flashes green while appearances of the line at other stations flash red.
 - To return to the held call, press the held **Line** button.
 - If you do not return to the held call within a specified time, it rings back to your telephone. The call remains camped-on to your station indefinitely.
 - If the held party hangs up, the call is released.
2. Repeat Step 1 to place additional lines on hold.

Note See the Call Pickup section to pick up a call on hold from another extension.

Exclusive Hold

This feature enables you to place a call on hold so that only you can retrieve it.

- While on a call, press **Hold** twice. That line's LED flashes green while appearances of the line at other stations are steady red (in use).

Automatic Hold

This feature enables you to place a call on hold by pressing another **Line** button – no need to press **Hold**. Make sure this feature is programmed on your system; if not, existing calls will drop.

- While on a call, press another extension button to receive/originate a new call. The accessed line's LED flashes (in-use). The first call is put on hold and your extension's LED flashes. You can also switch between calls without having to press **Hold**.

Consultation Hold

1. While on a call, press **Cnf/Trn**. The call goes on hold.
2. Dial another line.
3. Transfer the call or return to the held call by pressing its **Line** button.

Volume Control

- **To adjust the handset volume**
 - Press the **Vol ▲** to increase volume and **Vol ▼** to decrease volume during the call. When you hang up, the volume returns to the default setting.
- **To adjust the speaker volume for internal/external calls and background music**
 1. Press **Spkr**.
 2. Press an extension button - you hear dial tone.
 3. Press the **Vol ▲** to increase volume and **Vol ▼** to decrease volume. This volume setting applies to all calls until changed.
- **To adjust Ring Tone, Handsfree Answerback and Speaker Off-hook Call Announce**
 - Make sure the telephone is idle and the handset is on-hook. Press the **Vol ▲** to increase volume and **Vol ▼** to decrease volume. This adjusts volume for your telephone's ring tone, Handsfree Answerback and Speaker Offhook Call Announce simultaneously.
- **To adjust handset Beep Tone**
 1. With the handset off-hook, dial the Beep Tone Adjustment Code **#6101** (default code). You hear busy tone.
 2. Press **Vol ▲** or **▼** to reach the desired level.

LCD Contrast Adjustments

- Press and hold down the **Mic** button, and press and release **Vol ▲** or **Vol ▼** repeatedly.

Each time you press **Vol ▲** or **Vol ▼**, the contrast increases or decreases. There are eight steps in either direction. To return to the middle setting, repeat the above step.

The Basics

LCD Contrast Adjustments

This chapter gives you more details about your DKT3000-series or DKT2000-series telephone's advanced functions.

Using Your LCD

If your telephone has an LCD, use this section to learn more about its functions.

In its idle state, the LCD is a desk clock and calendar. When you are on an outside call, the call duration displays.

A “+” on the LCD readout (shown at right) indicates there is more data to display.

- Press **Scroll** to advance through the information.
- Press **Page** to switch from the Call Forward (CF) display to the User Name display.

Soft Keys

When Soft Keys are on, they replace the functions on the **Mode**, **Page**, **Scroll** and **Feature** buttons below the LCD. (**Feature** is a future feature for DKT3000-series phones only.) The following table defines Soft Key Prompts.

Table 1 Soft Key Prompts

Soft Key	Definition
ABR	Activates Automatic Busy Redial after dialing a busy outside telephone number.
ACB	Activates Automatic Callback after reaching a busy station, CO line, or CO Line group.
BUSY	(Busy Override) Sends a call-waiting tone to a busy station.
CONF	Initiates or completes a conference.
EXEC	(Executive Override) Breaks into the conversation of a busy called station.
EXIT	Exits you from a conference; remaining parties are connected.
JOIN	Joins all parties to a conference while on a conference call.
LINE	Adds a CO line to an existing call while in the Conference mode. The LCD prompts you to access a CO line after you press this key.
MESG	Sets a message waiting indication at a busy or unanswered station.
OVRD	Overrides options, busy mode, or overrides Do Not Disturb mode.
PGE	Enables you to enter a Page Group number (01~16).
RING	Makes a called station ring when making a voice announce call to the station.
RLS	Disconnects a call and returns telephone to the idle state.
RTRN	Terminates a feature operation and to return to a previously displayed state.
STA.	Adds a station to an existing call while in the Conference mode. The LCD prompts you to dial a station number after you press this key.
TALK	Makes a voice announcement to a called station that is ringing.
TRNS	Initiates or completes a Transfer while on an outside call. Press once for an immediate or announced transfer, depending on system programming. Pressing TRNS again completes the transfer.

Soft Key Example

When the Soft Key prompts appear on the LCD, the LCD Control Button just below the prompt offers access to that feature. Here's an example of how Soft Keys work.

1. When an outside call is in progress, the LCD appears as shown on the right.

ABR = Automatic Busy Redial

CONF = Conference

PAGE = Paging

2. If you select **CONF** (press **Page**), the display changes as shown right.

LINE = Add an outside line to the conference

STA = Add another station

RTRN = Return to the original caller without making a conference

3. You will be prompted to dial the desired station. The **RTRN** Soft Key (press **Scroll**) enables you to return to the original caller without making a conference.

Until the call is answered, you see the screen shown right.

When the call is answered, you see the screen shown right. **TRNS** = exit the call and transfer the first party to the second. **JOIN** = create a conference with you and both other parties. **RTRN** = drop the second party and return to a two-way conversation with the original party.

Advisory Messages

Advisory messaging enables you to store an informative message for LCD telephones that call your telephone. The messages can be up to 16 characters long. The Strata CTX provides a number of stored messages, shown in the table below. Message numbers 5~9 can be defined by your CTX System Administrator.

Msg No.	Characters Displayed	Additional Digits
0	OUT TO LUNCH	
1	IN A MEETING	
2	CALL _____	Directory Number 76345
3	BACK AT _____	Time (e.g., 1030)
4	RETURN ON _____	Date (e.g., 10 20)
5		
6		
7		
8		
9		

► To set an advisory message

1. Go off-hook or press your extension button or phantom directory number button to hear dial tone.

Note A phantom directory number button is similar to an extension button that is shared on other telephones.

2. Press **#411** + Message No. (see table) + any additional digits (such as time, etc.)
3. Go on-hook or press **Spkr** to release the line.

► To clear the registered message

1. Go off-hook or press your extension button or phantom directory number button to hear dial tone.
2. Press **#412**.
3. Go on-hook or press **Spkr** to release the line.

Account Code Calls

Account Codes (Forced or Voluntary) can be used for a variety of reasons including billing, tracking, and line restriction applications. Account Codes are assigned in the system as a fixed length (default is six digits) and are recorded by the system, along with the details of the calls, which can be printed on a Station Message Detail Recording (SMDR) report.

Verified/Non-Verified Account Codes

If programmed for Verified Account Codes, the system checks the account code you entered against a list created by the CTX System Administrator. The code you enter must be on the list for the call to proceed. Non-verified account codes must be of a uniform length specified by the CTX System Administrator.

Forced Account Codes

Some applications require you to enter an Account Code. These Forced Account Codes may be verified or non-verified, depending upon the application, but in either case, the caller must enter a code before proceeding.

► To dial using Forced Account Codes

1. Place a call in the normal method.

If the call requires an Account Code, a burst of tone (Success Tone) is heard after dialing the telephone number alerting you to enter the Account Code.

2. Enter the account number.

When the number of digits designated for account codes has been entered, the number will be checked against the verified list, if chosen, and the call will continue as normal. If the number of digits entered for the account code is not reached or the verified code does not match, then re-order tone is heard and the call is rejected.

You can bypass Forced Account Code requirements with three emergency numbers, including 911. See your CTX System Administrator for these numbers:

- 1) 911
- 2) _____
- 3) _____

Voluntary Account Codes (Verified/Non-Verified)

Voluntary Account Codes are optional. They can be entered during a call and are used for tracking selected calls using Station Message Detail Report (SMDR) call detail recording option.

If the system is set for Verified Account Codes, station users must enter a specific code when entering the Voluntary Account Code(s) or the code is not validated for the SMDR call report. This does not affect the call.

There are two ways to dial using a Voluntary Account Code:

► To dial using the Account Code button

1. After accessing a CO line, press the **Account Code** button. LCD telephones prompt you to “ENTER ACCOUNT CODE NOW.”
2. Enter the account code digits. The LCD prompt disappears upon entry of the first account code digit. After the account code is entered, the time indicator is restored in the LCD.
3. If your station is set for Verified Account Codes, you hear confirmation tone when the code is valid. If the code is invalid, you hear two short tones.
4. Enter the Account Code. Your conversation is not interrupted.

► To enter an Account Code using access codes

Note It’s a good idea to warn the other party that you will be disconnected momentarily when you enter the access code. Once the code is entered, you will be connected again.

1. After accessing a CO line, press **Cnf/Trn**. Once you press **Cnf/Trn**, your call is interrupted; you and the other party cannot hear each other. You will hear feature dial tone.
2. Dial **#46**. LCD telephones prompt you to “ENTER ACCOUNT CODE NOW.”
3. Enter the account code digits. The prompt disappears upon entry of the first account code digit. After the account code is entered, the connection is restored and the LCD shows the time.

Automatic Busy Redial

After reaching a busy outside number, you can activate Automatic Busy Redial so that the system automatically redials the number at regular intervals. The system repeats the redial until the destination is no longer busy. This feature may not be on some telephones on your system.

Automatic Busy Redial is not attempted while your station is busy, but continues to time-out. The system inserts a pause (P) on your LCD before redialing the number.

► To activate Automatic Busy Redial

1. When you reach a busy number, press **Auto Busy Redial** or **Cnf/Trn + #441**. The LED flashes red. You hear confirmation tone.
2. Hang up or press **Spkr**. The system redials, up to five to 20 times, every 30 to 180 seconds (depending on system programming). Your telephone receives ring tone when Automatic Busy Redial dials the number and it is available. The extension and Spkr LEDs flash green.
3. Lift the handset or press **Spkr** and wait for the party to answer. If you do not pick up the handset or press **Spkr** within recall timeout (five to 60 seconds) after a connection is made, you hear a muted ring for another 30 seconds, then the call disconnects.

► To cancel Automatic Busy Redial

- Press **Auto Busy Redial** or extension + **#442**.

Automatic Callback

When you reach a busy station, you can set Automatic Callback to have the system monitor the busy extension and notify you when it becomes idle.

Automatic Callback can also place you in queue for an available outside line, if you reach a line group in which all lines are busy. When a station or line becomes available, the system rings your telephone. Then when you answer, it automatically rings the intended destination. The amount of time the system will wait for an idle destination is set in system programming. Automatic Callback is also known as “CO Line Queuing.”

► To set Automatic Callback

1. If you hear busy tone after dialing an outside line access code or a station number, press **Auto Callback** or **4**. Busy tone stops, followed by success tone, then busy tone resumes.
2. Hang up. You can make other calls while waiting.
3. When the called station or outside line becomes idle, your telephone rings with a fast LED.
 - If you called a busy station, the extension LED flashes green (incoming call) and the called number displays.
 - If you called a busy outside line, the extension LED flashes green (incoming call rate). The seized line's number displays.
4. Answer within about three rings (five to 180 seconds, set in programming) to prevent the callback from being cancelled. After you answer, you hear success tone, and the LED flashes green (in-use).

If you hear a busy tone after answering a callback, the called party is already on another call or the line has already been seized or has received an incoming call. Your request is not cancelled. You will be called again the next time a line becomes idle.

If you were attempting to make an outside call, the telephone number is automatically dialed, including the account code or override codes that were used.

► To cancel ACB

- Press **Auto Callback** or extension button + **#431**.

Background Music

You can set background music over your telephone speaker or over external speakers. Up to 16 different music sources can be applied to the Strata CTX system: the first source is Quiet Tone, all others can be music or recorded information.

➤ **To enable background music on your telephone speaker**

➤ Press the **BGM** + $n(\#)$ + **BGM**, where n is the music sources 1~16

...or press an extension button + **#490** + n + **#** + **Spkr**, where n is the music source 1~16. If the music source is a single digit, press **#** before pressing **Spkr**. If the source is omitted, then the last selected music source is selected.

➤ **To cancel background music on your telephone speaker**

➤ Press **BGM**

...or press an extension button + **#491** + **Spkr**.

➤ **To enable background music over your external paging speakers**

➤ Press **BGM ext** and enter a source number (1~16) to select a music source

...or press an extension button + **#492** + $n(\#)$ + **Spkr**, where n is the music source 1~16. If the music source is a single digit, press **#** before pressing **Spkr**. If the source is omitted, then the last selected music source is selected.

➤ **To cancel background music over your external paging speakers**

➤ Press **BGM ext**

...or press an extension button + **#493** + **Spkr**.

Call Forward

System

System Call Forward (which is set in Programming) automatically directs calls to a predefined location, such as Voice Mail. See your CTX System Administrator to determine which type of Call Forward you have, as well as the Call Forward location.

Station

Station Call Forward enables you to assign Call Forward destinations for each extension on your telephone. Each extension can be independently set for a different Call Forward feature. You can set a Flexible Button to perform any Call Forward function - see [“Programming Feature Buttons” on page 63](#) for more details. Call Forward must be set prior to receiving the call.

The following calls to your station can be forwarded:

- Internal calls
- Auto Attendant calls
- Outside lines that ring only your station
- Transferred internal or incoming line calls

Call Forward Categories

You can set Call Forward for the following categories of calls. Within these categories, you can use five different types of Call Forward Settings.

- **Call Forward Any Call** – Forwards any call, whether an internal call or incoming line call.
- **Call Forward - Incoming Line** – Forward incoming line calls only.
- **Call Forward Any Call - Set for Another Station** – Enables you to forward all calls for another telephone within your telephone system.
- **Call Forward - Incoming Line Set for Another Station**– Enables you to set forwarding of incoming line calls for another telephone within your telephone system.
- **Call Forward System** – Forwards the calls to the destination preset for the entire telephone system, commonly voice mail.

- **Call Forward - External Location** – Forwards incoming line calls that ring directly to your extension to a destination outside the system.

You can change your forwarding destination from outside the system using the DISA feature. See your CTX System Administrator for DISA telephone numbers and security code access.

Call Forward Settings

- **Call Forward All Calls** – Forwards all calls immediately.
- **Call Forward Busy/Do Not Disturb** – Forwards calls immediately when your extension is busy or in Do Not Disturb (DND) mode.

In Tone-first systems with multiple lines, Call Forward Busy forwards calls only when all line appearances are in use. In Voice-first systems, Call Forward Busy forwards all calls any time your telephone is in use.

- **Call Forward - No Answer** – Forwards all calls to your station whenever you do not answer the call within a designated time (set by you when you enable the feature).
- **Call Forward Busy/Do Not Disturb/No Answer** – Forwards all calls to your station whenever you are busy, in the DND mode, or after ringing and you do not answer the call within a designated time (set by you when you enable the feature).
- **Call Forward Cancel** – Cancels the set Call Forward feature. Notice that each category of Call Forward has a different code for canceling.

Station Call Forward Procedures

The following table contains Call Forward Button sequences. You can do a Call Forward function by, one, entering the button sequence as described, or two, by programming a Flexible Button to perform the sequence. See [“Programming Feature Buttons” on page 63](#) for instructions on programming a Flexible Button.

Some Call Forward features require a Pass Code entry. Use the following procedure to change your Pass Code.

► To change your Pass Code

- Press Extension button + **#670** + ext. no. + old Pass Code (1~15 digits) + **#** + new Pass Code (1~15 digits) + **#**.

► To use the Call Forward button sequence

► Follow the instructions in the following table, shown under “Button Sequence.” Some features require additional input, such as:

- **Destination** – If the destination is an outside number, press **#** after entering the destination. The CTX accepts destination numbers of up to 32 digits.
- **Timer** – This is a two digit entry representing how long (eight to 160 seconds) your telephone should ring before forwarding the call. If you enter one digit, you must press **#** after entering the single digit.
- **Pass Code** – A four-digit code established by system programming to prevent unauthorized changes. The code applies to the station to be forwarded; not to the station entering the code.

Note In the following table, (Tone) means that a confirmation tone will play at that point in the sequence.

Table 2 Call Forward Procedure

Feature	Button Sequence
Call Forward Any Call - Internal and Incoming Line Calls:	
Forwards any call, whether an internal call or incoming line call.	
All Calls	Extension (Ext.) button + #6011 (Tone) + Destination No. (Tone)
Busy	Ext. button + #6021 (Tone) + Dest. No. (Tone)
No Answer	Ext. button + #6031 (Tone) + Dest. No. (Tone) + Timer + #
Busy No Answer	Ext. button + #6041 + Dest. No. + Timer + #
Cancel	Ext. button + #6051 (Tone)
Call Forward - Incoming Line Calls:	
Forward incoming line calls only.	
All Calls	Ext. button + #6013 (Tone) + Dest. No. (Tone)
Busy	Ext. button + #6023 (Tone) + Dest. No. (Tone)
No Answer	Ext. button + #6033 + Dest. No. (Tone) + Timer (Tone) + #
Busy No Answer	Ext. button + #6043 + Dest. No. (Tone) + Timer (Tone) + #
Cancel	Ext. button + #6053 (Tone)

Table 2 Call Forward Procedure (continued)

Feature	Button Sequence
Call Forward Any Call - Set for Another Station:	
Enables you to forward all calls for another telephone within your telephone system.	
All Calls	Ext. button + #6012 (Tone) + ext. no. + Pass Code (Tone) + # + Dest. No. + # (Tone)
Busy	Ext. button + #6022 (Tone) + ext. no. + Pass Code (Tone) + # + Dest. No. + # (Tone)
No Answer	Ext. button + #6032 (Tone) + ext. no. + Pass Code (Tone) + # + Dest. No. (Tone) + # + Timer + # (Tone)
Busy No Answer	Ext. button + #6042 + ext. no. + Pass Code + # (Tone) + Dest. No. (Tone) + # Timer + # (Tone)
Cancel	Ext. button + #6052 (Tone) + ext. no. + Pass Code + # (Tone)
Call Forward - Incoming Line Call - Set for Another Station:	
Enables you to set forwarding of incoming line calls for another telephone within your telephone system	
All Calls	Ext. button + #6014 (Tone) + ext. no. + Pass Code + # (Tone) + Dest. No. (Tone) + #
Busy	Ext. button + #6024 (Tone) + ext. no. + Pass Code + # (Tone) + Dest. No. (Tone) + #
No Answer	Ext. button + #6034 (Tone) + ext. no. + Pass Code + # (Tone) + Dest. No. (Tone) + # + Timer + #
Busy No Answer	Ext. button + #6044 (Tone) + ext. no. + Pass Code + # (Tone) + Dest. No. (Tone) + # + Timer + #
Cancel	Ext. button + #6054 (Tone) + ext. no. + Pass Code + # (Tone)
Change Pass Code	Ext. button + #670 (Tone) + ext. no. (Tone) + old Pass Code + # (Tone) + new Pass Code (Tone) + #
Call Forward - System:	
Forwards the calls to the destination preset for the entire telephone system, commonly voice mail.	
Activate	#620 (Tone)
Cancel	#621 (Tone)

Call History

Incoming calls with Caller ID or ANI information can be optionally recorded into a rolling list for the station where the call is ringing. The call is placed in the list along with the number, name (if provided), time and date of the call, and status of the call (answered, abandoned, or redirected). You can access this list from an LCD telephone with a flexible **Caller ID** button.

► To view Call History

- When your station is idle, press the **Caller ID** button. The Caller ID LED lights green and the latest record displays.
- Press **Vol ▲** for the next record; press **Vol ▼** for the previous record.
- To view the call date, time and status, press **Page** (press again to toggle to call name/number).

Call Park Orbits

The Call Park feature enables you to hold a call temporarily in a location other than your telephone. These areas are called orbits. You or another telephone user can retrieve a parked call from its orbit by specifying the orbit number. You can specify one of 20 General Park Orbits (7000~7019) or a valid extension number within the system.

Once you have parked a call in an orbit, you can:

- Hang up and retrieve the parked call at a later time
- Originate another call
- Access a voice paging device to announce the parked call for pickup from another station

If you park a call and it is not retrieved, it will recall to the parking station and one of the following occurs:

- If your station is idle when the system Call Park recall timer expires, the parked call automatically recalls to your station.
- If your station is busy, the parked call camps on.

If you have an LCD telephone, you can let the system automatically select an available orbit number which displays on your LCD.

► To park a call

1. While on a call, press **Park in Orbit**
...or **Cnf/Trn + #33**. The LED flashes green (consultation-hold).
2. Specify the Park Orbit using one of the following:
 - Press ***** and the system automatically selects a General Park Orbit between **7000~7019**. The chosen orbit appears on the LCD.
 - Enter a valid extension.
 - Press **#** and the system automatically selects your extension as the orbit.
3. Hang up. The caller's extension or line number and the orbit number are shown. If the parked call is not retrieved within a specified time, the call rings back to your telephone. When a parked call recalls your telephone, the LCD shows the line or extension that is recalling and the orbit number.

► To retrieve a parked call

1. Press **Park in Orbit**
...or press your extension button + **#32**.
2. Enter the Orbit Number where the call is parked or **#** for the extension from which you are calling. You cannot use ***** to retrieve a parked call. The extension LED flashes at the in-use rate when the call is retrieved.

Call Pickup

You can pick up a call that is ringing another station's extension, a call placed on hold at another station and other types of calls. When you pick up an internal call, the calling station and the called station displays on your LCD.

Group Pickup

Stations can be assigned in system programming to Pickup Groups. As many as 32 groups can be created to enable you to easily pick up incoming (new or transferred) or internal calls that are ringing stations that are in your group or in other groups. This feature does not pick up held calls. You may belong to more than one group. See your CTX System Administrator for group assignments.

Page/Internal Call Pickup

This feature picks up Internal (station to station), Group Page, and All Call Page calls. If these types of calls occur at the same time, the pickup priority is station-to-station and then Page calls in the order of occurrence. In some systems, this feature can be applied to pick up All Call Page exclusively.

► **To perform Call Pickup**

1. Press an extension button.
2. Enter a code from the following table.

Table 3 Call Pickup Feature Codes

For Incoming Calls:	Dialing	Description
Group	#5#34	Picks up a call ringing to a member of your pickup group.
Directed Extension	#5#5 + Primary Ext. No.	Picks up a call ringing on any line appearance of the telephone specified by its Primary extension number.
Directed Group	#5#32 + Group No.	Picks up a call ringing to a extension in the specified Pickup Group.
Directory Number	#5#22 + Ext. No.	Picks up a call ringing to the specified extension number only. Other lines ringing on the same telephone are unaffected.
Any External Call	#5#9	Picks up any incoming outside line call.
For Calls On Hold:	Dialing	Description
Local Retrieve	#5#71	Picks up a call held on the telephone from which it is dialed.
Remote Retrieve	#5#72 + Primary Ext. No.	Retrieves a call held on the telephone specified extension number.
Outside Line Retrieve	#5#73 + Outside Line No. (1~128)	Picks up a call held on the specified CO line regardless of the telephone placing the call on hold. Must enter three digits (e.g., 007).
Directed Extension Retrieve	#5#74 + Ext. No.	Picks up a call held on the specified extension number, regardless of the instrument(s) on which it appears.

Notes

- The Primary extension number is the directory number by which the telephone set is defined. Other, non-primary extension numbers may also appear on the telephone. By convention, the Primary extension number is assigned to the first button on a multi-button telephone.
- If more than one call is on hold, the call on the telephone's lowest button number is picked up.
- Ringing calls are picked up over held calls as a priority.

Call Waiting

You can answer a call that is transferred to your station, even when your station is busy. When another call is camped onto your station, you hear two Camp-on tone beeps and the extension or Line LED flashes red (on-hold).

If a call is sent to your station when busy, and your station does not have an extension button available to receive the call, two camp-on tone beeps are sent to your telephone. You must disconnect or transfer the existing call to answer the waiting call.

► To answer a waiting call by placing the current call on hold

- Press **Hold**. The existing call is placed on hold. The camped-on line rings your station (the Line LED flashes green - incoming call)...or if your telephone has the Auto Hold feature, just press the flashing extension button.

You are connected to the transferred call. The extension or Line LED flashes green (in-use).

Note See your CTX System Administrator to find out if you have Auto Hold.

► To answer a waiting call by disconnecting or transferring the current call

- Hang up or transfer the existing call; the camped-on call rings your station. The camped-on line rings your telephone and the Line LED flashes green (incoming call).

...or press the flashing extension or **Line**. The existing call is placed on hold. The camped-on line rings your station (the Line LED flashes green - incoming call). This disconnects the current call and connects you to the transferred call. The extension or Line LED flashes green (in-use).

Direct Inward System Access (DISA)

Outside callers with touch tone telephones can call in to lines programmed for Direct Inward System Access (DISA) and dial an extension or outgoing line without going through an attendant or operator. See your CTX System Administrator for details.

1. From outside the system, dial the public telephone number assigned to DISA. The call will be answered and you will hear CTX dial tone.

If you do not dial within 10 seconds, the line disconnects.

2. When you hear dial tone, dial an extension or an outside line.
3. If you dial an outside destination, you may need to enter a security code provided to you by the CTX System Administrator. When you hear the tone, enter the security code. If accepted, the call will proceed.
4. If you receive busy tone and you want to dial another number while the station is still ringing, press * and repeat Step 2.

Direct Station Selection Buttons (Hotline)

This optional feature enables you to use a **DSS** button to connect directly to another station's line extension. The DSS LED shows the status (idle/busy) of the station and/or the station's primary extension. For example, a station's DSS button LED shows busy (light steady red) when the station is:

- busy on a call on any button
- idle but all appearances of the station's extension are in use by other stations.

When the station is in DND, the LED flashes red.

► To connect directly to another station's extension

1. When connected to a line or another station, press **DSS**.

The original party is put on-hold. You can call a station even if the DSS LED shows busy (steady red).

2. Announce the call...or transfer the call by hanging up or pressing **Release**.

Note You can transfer the call to an idle or busy station.

Distinctive Ringing

1. Press **#9876** to enter User Programming Mode.
2. Press a **Line** button. The Line LED is steady green.
3. Enter the ringing pitch number:
1 = Low, **2** = Middle, **3** = High, **4** = Combination
4. Lift the handset to return to idle.

Do Not Disturb

If your station is in Do Not Disturb (DND) mode, internal, external and transferred calls do not ring your station and Off-hook Call Announce calls are denied. You can continue to make calls while in the DND mode. When originating a call in DND mode, you will hear a short burst of interrupted dial tone followed by continuous dial tone. You can start dialing at any time during either tone.

If you put your Primary extension into DND mode, all calls to that telephone are rejected. If your extension is set for Call Forward-Busy or Call Forward-Busy/No Answer, the call is redirected to the forwarding destination immediately.

If you put an extension other than the Primary extension into DND, only calls to that extension on your telephone will be blocked. Appearances of that extension on other telephones continue to ring.

► To activate DND on your Primary extension

- Press **Do Not Disturb** or **#6091** (hear Success Tone). The LED lights steady red and DND mode is activated for the entire station.

► To activate DND on a non-Primary extension

- Press the desired extension appearance and **Do Not Disturb** or **#6091** (hear Success Tone). The LED lights steady red and DND mode is activated for that extension on your telephone.

► To deactivate DND

- Press **Do Not Disturb** or **#6092** (hear Success Tone). The LED lights goes out and DND mode is de-activated.

Setting DND for Another Extension

➤ **To activate DND for another extension**

- Enter **#6191** (hear Entry Tone) + the Primary extension of the remote extension + the pass code + **#** (hear Success Tone). This sets DND as if activated by the Primary extension on the target telephone.

➤ **To deactivate DND for another extension**

- Enter **#6192** (hear Entry Tone) + the Primary extension of the remote extension + the pass code + **#** (hear Success Tone). This removes DND from the target telephone.

➤ **To change your DND Pass Code**

- Enter **#670** (hear Entry Tone) + ext. no. (hear Entry Tone) + old pass code + **#** (hear Entry Tone) + new pass code + **#** (hear Success Tone).

If you activate DND while a call is ringing, the ringing stops. The LED continues to flash on your telephone and ring on other appearances.

Door Lock(s)

Your telephone may have **Unlock Door** button(s). Each **Unlock Door** button is programmed to unlock a specific door. Check with your CTX System Administrator to find out the locations of your system's door phones and record them below.

Door Lock No.	Location
0	
1	
2	
3	
4	
5	

Door Lock No.	Location
6	
7	
8	
9	
10	

➤ **To unlock a door**

- Press the specific **Unlock Door** button or **#12** + the Door Lock Number (see above table). The door unlocks for three~30 seconds (set in system programming). The Unlock Door LED is lit while the door is unlocked.

Door Phone(s)

Door phones can be used to call phones selected in system programming. When a door phone calls, you hear a distinctive ringing tone, one or five times (set in system programming). You can also call a door phone and monitor the surrounding area.

The number of possible door phones varies by Strata CTX system, with up to 24 as the maximum for larger systems.

LCD telephones display the door phone name ID when calls are made to or from door phones. Check with your CTX System Administrator to find out the names and locations of your system's door phones and record them below.

Door Phone	Name/Location	Door Phone	Name/Location

► To answer a door phone call

- Lift the handset while the door phone is still ringing. The extension LED flashes green (in-use) and you are connected to the door phone.

...or to pick up door phone calls ringing someone else's telephone, press extension + **#5#5** + directory number.

► To call/monitor a door phone

1. With the handset off-hook, press a extension. You hear dial tone and the LED flashes green (in-use).
2. Press **#15** + extension for the door location. A two-way talk-path exists between your telephone and the called door phone. You can audibly monitor the area around the door phone.

► To call from a door phone

1. Press the door phone button and then release it. You hear a distinctive ringing tone—one or five times (set in system programming).
2. When answered, speak at a normal voice level in the direction of the door phone.

Emergency Ringdown

If a station remains off-hook for a programmable period, it can be automatically treated as an Emergency Call and directed to an emergency destination. The station may have partially dialed a number or have dialed no digits at all. Each station is programmed with its specific emergency ringdown destination.

A station number or a group pilot number can be specified as an emergency ringdown destination. In a private network, the station or pilot number must be in the same network node. Remote emergency destination and door phones are not permitted.

Language Codes

This feature enables you to change the language sent from the Attendant Console or from a PC. See your CTX System Administrator to find out if your telephone is programmed with the ability to change languages.

► To change the Language Display

- Enter the Change Language access code **#495** + the Language Code (see below).
 - 1:** English date format – **MM/DD (YY)**
 - 2:** British English – **DD/MM (YY)**
 - 3:** French – **DD/MM (YY)**

Off-hook Call Announce

Off-hook Call Announce (OCA) enables you to complete a call to a *busy* digital telephone. Your telephone must be programmed to either announce automatically or to announce after you press a button on your dial pad. The destination telephone must be programmed to accept an OCA. The announcement may be delivered over the handset or the speaker.

Handset OCA Announce can operate on any digital telephone. Speaker OCA requires the addition of a special circuit board inside the DKT speakerphone.

► To make an OCA call

- **Manual** – Dial an extension. When you hear busy tone, press **5** and, after one long tone, you can talk through the speaker of the destination telephone. The person you are calling has answering options described below.
- **Automatic** – If your telephone and the extension you are calling have been programmed for Automatic OCA, you can talk through the speaker of the destination telephone without hearing the busy tone and without dialing **5**.

► To answer a Handset OCA call

While you have a call in progress, you hear one tone in your handset to indicate that a second station is calling.

- Press **Msg** to toggle between the new and original callers.

You talk to the new caller for as long as you hold down **Mic**. When you release the button, you return to the original caller. In both cases, neither caller can hear the other. Your LCD indicates which station or CO line you are connected to.

► To answer a Speaker OCA call

1. While you have a handset call in progress and you hear one tone, this indicates that a second station is calling. The second caller connects to the speaker in your telephone. The Spkr LED flashes and the Mic LED lights. You will be speaking to the first caller through your handset and the second caller through the microphone.

Press **Mic**; the Mic LED turns Off. You will no longer be talking to the second caller, although he/she can still speak through your speaker.

2. Press **Mic** again to reconnect to the second caller. You can toggle as often as you choose. If you do not want the first caller to hear your conversation with the second caller, cover the mouthpiece of your handset.

Override Calls

The available override features are:

Busy Override

Ring Over Busy Override enables you to send a muted ring tone to a busy station to indicate a call is waiting. The Busy Override (BOV) muted ring can be programmed for each station to be two muted rings only or continued muted rings until the call is answered. This option applies to the station receiving the muted ring. The muted ring can be sent to the telephone speaker or to the telephone handset/headset and speaker.

► To use Busy Override

- After reaching a busy station, press **2**. A muted tone is heard at the busy station, indicating that a call is waiting. The station number displays.

Do Not Disturb Override

Do Not Disturb (DND) Override lets you send a call waiting tone or ringing to a station in DND mode to indicate that a call is coming in. Your telephone may be programmed to block DND Override from other telephones. Your station's LCD shows the station you have called is in the DND mode.

OCA is possible to DND stations from stations that are programmed for DND Override.

► To use DND Override

- After reaching a station in DND mode, press **2**. A tone signal is heard at the DND station, indicating a call is coming in. On your station, the LCD shows the station number you have overridden.

Your LCD displays **DND OVR DENY**, if the station you called denies DND Override.

Executive Override

Executive Override enables you to enter an established conversation. Your telephone can also be programmed to block Executive Override from other telephones.

► To perform Executive Override

- After reaching a busy station, press **3**

...or, if you have an LCD telephone, use the **OVRD** Soft Key.

You enter a conference with the busy station and the party to whom he was talking. The called parties may hear an optional tone signal prior to your entering the conversation.

Your LCD displays **EXEC OVR DENY**, if the station you called denies Executive Override. If you do not have Override privileges, you will camp on.

Destination Restriction/Traveling Class Override

Enables a station user to override the Destination Restriction or Traveling Class of a particular telephone by entering a pre-determined account code.

► To use Destination Restriction or Traveling Class Override

1. Press **471**. Confirmation tone plays and the LCD shows "Enter OVR Code."
2. Enter the trunk access code or LCR access code.
3. Dial the external telephone number.

Class of Service Override

By dialing a Class of Service (COS) Override code, a user can change a station's set of privileges to one associated with the override code. When the call is terminated and another is attempted from the same station, the original COS is applied. This allows selected users to override restrictions that are placed on any telephone in the system.

► To perform Class of Service Override

1. Access an outside line. You hear dial tone and the LED flashes at the in-use rate.
2. Press **Cnf/Trn + #471**. Dial tone stops. Your LCD prompts you to enter a code.
3. Enter the COS Override Code (four digits). You hear dial tone. For security reasons, the override codes are only available on a selected basis. See your CTX System Administrator.
4. Dial a telephone number.

Privacy Override

This feature enables you to enter an established call on a line you share with another telephone. Up to two station users can enter an existing CO line-to-station call (i.e., up to three stations can be connected to a CO line). You can also use this feature if the station that is already connected to the CO line is in the Privacy Release mode.

Station users with **Privacy Release** can allow stations with the shared button appearance to enter their conversations, even if the station entering the conversation is not programmed for Privacy Override. (see [“Privacy” on page 46.](#))

Paging

Station users can make page announcements to telephones and external speakers. Check with your CTX System Administrator to find out the zone numbers for various paging groups.

► To make a Page Announcement to telephones or external speakers

1. Lift the handset, press extension and enter a paging access code.
2. Make your announcement, then hang up.

► **To make a Group Page**

- Press **Group Page** and enter the Group number (01~16)
...or press extension + **#31** and enter the zone number.

Answering a Page

- To answer a Group Page, lift the handset off-hook, press extension + **#5#35** and enter the Group number.
- To answer an External Group Page, lift the handset off-hook, press extension + **#5#36** and enter the Group number.

All Call Page

You can make an All Call Page to telephones assigned to the “All Call Page Group.” Stations are assigned to the “All Call Page Group” in system programming.

► **To make an All Call Page**

1. With the handset off-hook, press **All Call Page**
...or extension + **#30**. This pages all telephones in the All Call Page Group but, depending on system programming, you may or may not page external speakers.
2. Make your announcement then hang up.

► **To answer an All Call Page**

- Lift the handset off-hook, press extension + **#5#35**.

Emergency Page

An Emergency Page overrides Group Pages or All Call Pages to telephone and external paging devices.

- To make an Emergency Page, lift the handset off-hook, press extension + **#37**.
- To make an Emergency Page to a group, lift the handset off-hook, press extension + **#38** and enter the Zone number.

Privacy

Privacy controls the ability of more than one person to use the same extension or CO line at the same time. Privacy applies to multiple appearances of extensions, Phantom extensions, outside Lines and outside Line Group buttons. The application of Privacy to individual telephones is controlled in system programming.

By default, the system is private. If you are in a conversation, another telephone with an appearance of the line on which you are talking cannot intrude unless that telephone has been programmed for Privacy Override. In that event, the other telephone may enter and leave the conversation at will. If all users are provided with Privacy Release in Class of Service, the system will function as non-private.

Your telephone may be equipped with a **Privacy Release** and/or a **Privacy on Line** button. On a normally private telephone, **Privacy Release** allows other appearances of you line to join the conversation. On a normally non-private telephone, **Privacy on Line** allows you to exclude others. The Privacy condition may be toggled at any time during a conversation. At the end of the conversation, the line's privacy condition returns to its original state.

➤ To use Privacy Release

➤ While on a CO line call, press **Privacy Release**. The LED lights red. The outside line flashes at all appearances. When another station user enters the outside line call by pressing a common outside **Line**, the Privacy Release LED turns Off. To add a third station, press **Privacy Release** again; the process repeats.

➤ To set/cancel Privacy

➤ Press **Privacy on Line** to set privacy. The LED lights steady red. Others are blocked from entering your outside line calls when they press a common **Line** ...or press **Privacy on Line** again to cancel the feature. The LED turns Off.

Redial

Use this button to redial the last number dialed from your telephone.

➤ To redial the last number, press **Redial** or ***0**.

Speed Dial

Speed Dial enables you to dial a sequence of up to 32 digits with a shorter code. Dial sequences can include telephone numbers, authorization codes, passwords feature activation codes and pauses. Speed Dial may be used to originate a call or invoked after a call is established. There are two types of Speed Dial:

- **Station** – Your CTX System Administrator allocates a block of up to 100 personal speed dial numbers in increments of 10 per telephone. You can create and change these numbers from your own telephone. You have exclusive use of them. If you have a DKT3014 large display telephone and want your named station speed dial numbers to appear on the display, see your CTX System Administrator.
- **System** – All telephones in your system can share a list of up to 800 System Speed Dial numbers under the exclusive control of the CTX System Administrator. In some cases, System Speed Dial will allow you to reach numbers that you would not be allowed to dial directly from your telephone.

Making a Call Using Speed Dial

There are three ways to begin a Speed Dial Call.

1. Dial *
...or press **Spdial** on a DKT3000-series telephone
...or press the **Speed Dial** feature key on any DKT.
2. Dial the Station or System Speed Dial Number. Station Speed Dial numbers occupy numbers 100~199. System Speed Dial numbers occupy numbers 200~999.

Storing a Station Speed Dial Number

There are three ways to store a Station Speed Dial number, including Programming Mode, Access Codes and through system programming by your CTX System Administrator.

► To store a Station Speed Dial Number using User Programming Mode

1. Press **#9876** to enter User Programming Mode. The LCD shows “USER PROG MODE.”
2. Press the fixed **Spdial** button or the Speed Dial feature button. The LCD shows “SPEED DIAL MODE.” If this display does not appear, see your CTX System Administrator to determine if Speed Dialing memory is assigned to your telephone.
3. Press **1**. The LCD shows “INDEX NUMBER.”
4. Enter the two digits which, combined with the **1**, form the Station Speed Dial Number.

Example: Entering **09** would result in storing Station Speed Dial Number **109**. The LCD shows this number in the upper left corner. If there is already a number stored, it appears below the Speed Dial Number.

5. Enter the desired destination. It appears in the lower right of the LCD. Instructions are given below for more complex dialing strings, usually telephone numbers.
6. Press the fixed **Spdial** button or the Speed Dial feature button. The LCD shows “DATA PROGRAMMED.”
7. If you want to enter another number, press the fixed **Spdial** button or the Speed Dial feature button. The LCD shows “SPEED DIAL MODE.”
8. Pressing **Spdial** or the Speed Dial feature button again toggles you between User Programming and Speed Dial mode. Lift and replace the handset to exit User Programming altogether.

► To store a Station Speed Dial Number using an Access Code

1. Dial **#66**. The display shows “SPEED DIAL” and you hear Entry Tone.
2. Dial the Station Speed Dial number (100~199). The LCD shows your digits and you hear Entry Tone.

Note Selected telephones may have the ability to change System Speed Dial numbers. Follow this procedure but specify a System Speed Dial number (200~999) instead.

3. Enter the destination digits, then press **#**. The LCD shows “SPEED DIAL” + the Speed Dial Number + destination + **#**. You hear Success Tone.
4. Release the telephone. To enter another number, repeat the process, starting with Step 1.

CTX System Administration

The third method of storing station Speed Dial numbers is via your CTX System Administrator, who can establish your Station Speed Dial number through administrative software and associate a name with it. This name is used by the Directory Dialing feature of DKT3014 large display telephones.

Advanced Speed Dial Operation

Special Characters

Speed Dial Numbers may include **0~9, #, *** and Pause. When using the Access Code input method (see above) it is also necessary to use **#** to indicate you have finished entering the destination number. This creates 14 functions to be input from the 12 buttons on the dial pad.

Long Speed Dial Numbers

Speed Dial Numbers are stored sequentially in memory areas capable of holding 32 digits. If you exceed 32 digits, the excess are stored in the next higher area and consume the next sequential Speed Dial Number.

You can dial the entire string by entering the original Speed Dial Number and all digits will be sent, including those in excess of 32. If that were Speed Dial Number 100, Number 101 would no longer be available. You are not prevented from storing a new Number 101 but, if you do, Number 100 will be shortened to 32 digits.

The numbers are defined in [Table 4](#):

Table 4 **Dial String Characters**

Entry	Meaning
0~9	0~9
#	End of Speed Dial Number when entering via access code (#66)
*	Escape. “*” functions as an escape key indicating that the number immediately following represents something exceptional. When * is used as an escape character, it consumes one Speed Dial digit. Entering *7 to insert a seven-second pause would use two of 32 characters.
* (1 ~ 9)	Pause (1~9) seconds. If you need to pause longer than nine seconds, enter additional pause escape sequences. For example, to insert a 17-second pause, enter *9*8. The display of a pause in the Speed Dial Number shows a “P” without specifying the duration. In this example, you would see “PP.”
**	*
*#	#

Tone/Pulse Dialing

With some older Central Offices, you may have to make calls on outside lines programmed for rotary dial pulses. This feature enables you, while on these lines, to switch to tone dial to access remote equipment (such as an answering machine) requiring touchtones.

Note With ISDN calls, when **Tone Dial Select** is pressed, all of the digits entered after that point will be sent with touchtones.

➤ **To change Tone Dialing**

1. Access an outside line.
2. Dial a telephone number.
3. While on the call, press **Tone Dial Select**. Although the outside line is programmed for rotary dial pulses, access the outside line and dial the telephone number like any other call described in this user guide.

The Tone LED lights steady red and you are able to send touchtones with your dial pad. The feature is cancelled when the call is completed.

Voice Mail - Direct Transfer

The Strata CTX enables you to transfer a call directly to a voice mailbox without first ringing that person's telephone.

► **To transfer a call directly to Voice Mail (VM)**

1. While on a call, press **Cnf/Trn**. You hear feature dial tone.
2. Enter **#407**. You hear entry tone.
3. Enter the VM mailbox number (usually the same as the extension number), then press **#**. The call transfers immediately and your extension becomes idle.

Voice Mail Soft Keys

This section provides simple definitions of the Strategy ES Voice Mail Soft Keys. Once your telephone is connected to your Strategy ES voice mailbox, the LCD displays the Strategy ES Main Menu options shown in [Table 5](#) below.

You are then able to perform many of the standard Strategy ES voice mail functions using the Soft Keys on your telephone. [Table 6](#) shows a sample of some of the available Soft Keys.

For more information on Strategy ES voice mail features, refer to the *Strategy Voice Processing User Guide*.

Call Recording

While on an active call, a station user can record the conversation and store it in a Strategy ES voice mailbox. Recordings can also be paused or restarted. Depending upon your System Administrator, you are given either a manual method of recording that allows you to designate the mailbox where the recording will be sent or an auto method that automatically sends the recording to a predefined mailbox that is assigned to the phone you are using. This may be your personal mailbox.

Note Ask your System Administrator which method to use when recording a call.

This feature requires the presence of a **Record** and a **PS/RES** (Pause/Resume) button on your telephone. Feature codes are not available.

Important! Strategy ES mailboxes have a definable limit on the length one message can be. If you plan on making lengthy recordings, see your System Administrator so your message recording time can be properly defined.

► To record a call

1. With a call in progress, press **Record**.

If you are using the *auto method*, the Record LED flashes rapidly and there is approximately a one second interval (in extreme busy conditions, up to five seconds) before the recording starts and the Record LED changes to the in-use interval flash rate. You are now recording. Continue to Step 3.

...or if you are using the *manual method*, the Record LED flashes green rapidly. Continue to Step 2.

2. (Manual method only) If you want to record the call to the predefined mailbox associated with the phone you are using, press **#**. The Record LED flashes rapidly and there is approximately a one second interval (in extreme busy conditions, up to five seconds) before the recording starts and the Record LED changes to the in-use interval flash rate. You are now recording.

...or if you want to record this call to another mailbox, enter the mailbox number (usually the extension number). Finish by pressing **#**. The Record LED flashes rapidly and there is approximately a one second interval (in extreme busy conditions, up to five seconds) before the recording starts and the Record LED changes to the in-use interval flash rate. You are now recording.

3. To stop recording, press **Record**. The LED turns off and the recording stops. To resume recording at this point, you need to begin a new recording, see Step 1.

Pause/Resume Recording

You can pause the recording while continuing the conversation by pressing **PS/RES**. The PS/RES LED flashes red. Your conversation is no longer being recorded.

To resume recording as part of the same message, press the **PS/RES** button again. You can pause and resume indefinitely throughout the conversation. The only limit may be a message length imposed by the voice mail system.

Other Voice Mail Features

Another voice mail feature lets you to include a voice mailbox in a conference call. See [“Adding Voice Mail to a Conference” on page 15](#). For instructions on the Strategy Voice Mail features, refer to the *Strategy Voice Processing User Guide*.

DKT3014 LCD Features

4

This chapter shows how to use the DKT3014-SDL (shown below) large screen directory display and individual name searches.

DKT3014-SDL Telephone

Directory and Speed Dial Listings

The directory menu (idle state) is shown below.

Direct Station Selection

This option displays all named stations in alphabetical order.

1. Press the **DIRECT SS** Soft Key to view the first screen.
2. To view the following page, press the **MORE** Soft Key; press **PREVIOUS** to page back.
3. To select someone from the list, press the Soft Key next to their name. The system calls that number.

System Speed Dial and Personal Speed Dial

Using System Speed Dial and Personal Speed Dial is very similar to using Direct Station Selection, described above.

1. Press the Soft Key next to **SYSTEM SD** or **PERSONAL SD** to view the first screen.
2. To view the following pages, press the **MORE** Soft Key; press **PREVIOUS** to page back.
3. To select someone from the list, press the Soft Key next to their name. The system calls that number and displays its directory information.

Internal Directory and External Directory

External Directory enables you to search the System Speed Dial Numbers alphabetically (typically, external destinations). Internal Directory enables you to search all of the internal name extensions alphabetically. This saves time since you do not have to step through the lists screen-by-screen.

See [Table 7 on page 61](#) for instructions on entering letters, numbers and punctuation from the dial pad.

1. Press the **INTERNAL DIR** or **EXTERNAL DIR** Soft Key to view the first screen.

FRED J	NO. 3371
INPUT THE NAME?	
EXIT	FIND

2. Begin by entering the name (see [Table 7](#)) and pressing the **FIND** Soft Key.

DKT3014 LCD Features

Directory and Speed Dial Listings

If you entered “B,” all names beginning with “B” are listed. You can press the **MORE** Soft Keys to view adjacent pages.

3. To select someone from the list, press the Soft Key next to the name. The directory information displays.
4. Press the Soft Key next to the person or dept. you wish to call. The system calls and displays the directory information.
5. Press any key to return to the idle screen...or, from the directory listing screen, press **EXIT** to return to idle.

Alphanumeric Entry

You can enter alphanumeric characters from the dial pad to refine a name search in the Internal or External Directory (see example below and [Table 7](#)).

Example:

Press the  for “A.”

Press the  again for “B,” etc.

Refer to the table for other characters.

Table 7 Dial Pad Alphanumeric Characters

Press Dial Pad Buttons	Number of times to press the dial pad button				
	1	2	3	4	5
1	-	.	:	,	1
2	A	B	C	'	2
3	D	E	F	!	3
4	G	H	I	&	4
5	J	K	L	*	5
6	M	N	O	#	6
7	P	Q	R	S	7
8	T	U	V	?	8
9	W	X	Y	Z	9
0	()	&	/	0

- To add a space or move one character to the right, press the **RIGHT** Soft Key.
- To backspace (delete previous character), press the **LEFT** Soft Key.
- To cycle back to the first letter, continue pressing the **LEFT** Soft Key.

DKT3014 LCD Features

Directory and Speed Dial Listings

User programming enables you to change your telephone's layout/registration and other settings. With user programming you can re-define Flexible Buttons to perform other functions.

- Enter numbers in your personal Speed Dial list
- Program One Touch and Flexible Buttons
- Register Call Forward assignments for easy use (max. of four buttons per telephone)
- Assign Message Waiting Keys
- Assign the background music (BGM) source to be played over the telephone's speaker

Note User Programming applies to LCD telephones only.

Programming Feature Buttons

Digital telephone users can use the programming mode for customizing their Toshiba telephones without the aid of an Administrator or Service Technician. The User Programming mode is accessed with a **Program** button assigned to a Flexible Button or through an access code. User Programming enables users to customize these features:

- **Flexible Buttons** – Toshiba telephones have 10, 14, or 20 Flexible Buttons to which the user can assign any one of approximately 50 different features (DND, ACB, Release, etc.). Once assigned to a button, the feature is accessed by pressing that button. Some of the types of feature buttons that users can set on their telephones include:

User Programming

Flexible Button Codes

- **Call Forward** – Users can set the Call Forward (CF) destination and CF-No Answer Timer for the CF buttons.
- **One Touch** – Users can set speed dial and custom feature access code sequences for One Touch buttons.
- **Background Music** – Users can select Quiet Tone or the music source (up to 15) that will play on their telephone's speaker when they activate the **BGM** button.

Note Directory number and external line buttons cannot be added or deleted, but their ring tones can be individually changed.

In addition to the Programming Mode, an advanced programming function enables your CTX System Administrator to individually turn On/Off the telephone's beep tone, handset call waiting tone, and microphone background noise cancellation option. This mode enables LCD contrast adjustment and testing the DKT3014 LCD screen.

User Programming Mode

- To enter User Programming Mode, press the **Program** button
...or dial **#9876**. "USER PROG MODE" appears on your LCD. The Program LED is steady green.
- To exit User Program Mode, press **Program**
... or go off- and on-hook press **#9876**.

Note A DKT equipped with a headset adapter ignores the hookswitch. It can only exit User Programming by timing out (approximately 15 seconds).

Flexible Button Codes

Flexible buttons are the unassigned buttons on your keypad that can be used to store features. The number of available Flexible Buttons depends on your telephone model and how the buttons are preassigned by the CTX System Administrator. See [pages 3 and 6](#) for the Flexible Button locations.

The following steps enable you to program features onto Flexible Buttons for one-touch feature access.

Setting/Changing a Flexible Button's Function

1. Press **#9876** to enter User Programming Mode.
2. Press **Hold**.
3. Press the Flexible Button to set or change.
4. Enter the Flexible Button Code (see [Table 8](#)), plus any optional parameters.
5. Press the same Flexible Button (flashing) to save the setting. "DATA PROGRAMMED" appears on your LCD.

One Touch Buttons

One Touch buttons can be used for storing frequently used features or dialed numbers, such as Speed Dial numbers (use Speed Dial Codes to store additional numbers). One-touch buttons can be preassigned to your telephone – your System Administrator can help you identify them.

If you do not have a One Touch button, but you have an available Flexible button, you can convert the Flexible button to a One Touch button. Perform the procedure called [“Setting/Changing a Flexible Button’s Function” on page 65](#) (in Step 4, enter the access code for One Touch button). Once you have created a One Touch button, you can change the function by using the following procedure.

Changing a One Touch Button

1. Press **#9876** to enter User Programming Mode.
2. Press the One Touch button to be set.
3. Enter the digits or special buttons for the function to be dialed. You can include the following in the dial string:
 - Dial pad digits **0~9**. To program special characters, see [Table 9](#).
 - A maximum of 32 characters.
 - Station and System Speed Dial index (or bin) numbers can be entered. The Speed Dial index number will automatically dial out on the extension or Line programmed on the One Touch button with the associated Speed Dial index number.
 - Function buttons, except One Touch or a **Program** button.
 - Handset hooking (on-hook/off-hook) cannot be recorded.
4. Press the One Touch button to save the entry.

We suggest writing the name or number of the One Touch button on your button strip.

Table 9 Special Characters

Entry	Meaning
* + Hold	Indicates “stop.” The One Touch button blinks rapidly and stops the delivery of the remaining digits in the string until it is pressed again. Multiple “stops” can be programmed into one string.
* (1~9)	Pause (1~9) seconds. If you need to pause longer than nine seconds, enter additional pause escape sequences. For example, to insert a 17-second pause, enter *9*8 . The display of a pause in the Speed Dial Number shows a “P” without specifying the duration. In this example, you would see “PP.”
**	*
*#	#

To Use a One Touch Button

- Press the One Touch button.

Setting/Changing a Personal Speed Dial Code

See [“Storing a Station Speed Dial Number”](#) on page 48.

Feature Codes

Feature Access Codes are entered as a sequence on your telephone to use a particular feature.

Table 10 Feature Access Codes

LED Indicator Details

Each line and feature button has a LED next to it which indicates the status of the line or feature associated with the button. Line LEDs light red or green and flash at varying rates to indicate call status (see [Table 11](#)).

Table 11 LED Indicators

LED	Your Station (Green)	Other Station (Red)
	Interval Rates	
Extension In-Use (access outside line)	2 seconds On, 1/8 second Off — 1/8 second On/Off	steady
Incoming Call (while ringing)	1 second on at 10 pulses/ second —1 second Off	one second On/Off
Hold (outside line) If using Pooled Line Grp , the hold indication is only at the station that places the call on hold.	4 pulses/second for 1/8 second On/Off	1/2 second On/Off
Hold – Consultation (during consultation/transfer to another station)	10 pulses/second	steady
Hold – Exclusive (outside line)	10 pulses/second	steady
Hold – Recall (when held call recalls your idle station)	1 second at 2 pulses/second, 1 second at 10 pulses/second	flashes
Hold – Exclusive Recall	1 second at 2 pulses/second, 1 second at 10 pulses/second	steady
Internal Call (while station ringing)	Your extension button flashes 10 pulses/second—1 second Off	[SDN] red flashing or green ringing
Busy Station Transfer (outside call transferred to your busy station from a designated station or AA)	4 pulses/second, 1/8 second On/Off	3/4 second on, 1/8 second Off
After disconnecting first call...	10 pulses/second	2 pulses/second
Conference	10 pulses/second	steady

User Programming

LED Indicator Details

This chapter provides an overview of the following two optional units and describes the features, buttons and associated LEDs. There's a 3000-series and 2000-series model for each of these units.

- **Digital Add-on Module (DADM)** – adds 20 line/feature buttons to digital telephones. Up to two DADMs can be connected to a telephone.
- **Direct Station Selection (DSS) Console** – adds 60 line/feature buttons to a digital telephone. Available for system operators who do not have an attendant console.

DADM

Digital add-on Modules (DADM) can be connected to both the 3000- and 2000-series telephones to provide additional buttons. The 3000-series telephone requires a 3000-series DADM; the 2000-series telephone requires a 2000-series DADM.

The DADM3020 model, is shown below, right. The DADM2020 (not shown) looks similar and has the same functions.

Buttons and LEDs

The buttons can be programmed for Direct Station Selection (DSS), outside line access, and Station or System Speed Dial. Directory Numbers or other functions cannot be assigned to DADMs.

Each DSS button and **Line** button has an LED that provides a status of the outside line or station assigned to it. The DSS button acts like a speed dial button to a specific extension.

- A station or line shows steady red when in use by others; green when in use by the DADM.
- A DSS LED will flash red while making a call and turn intermittently green once connected.
- An outside Line LED is green when the outside line is in use by the DADM console user. It is red if it is in use by another telephone user.

Note Button numbers in the figure to the right are examples only.

DSS Console

The Direct Station Selection (DSS) console operates alongside of a digital telephone to provide 60 additional buttons. The 3000-series telephone requires a 3000-series DSS; the 2000-series telephone requires a 2000-series DSS. An example of the DDSS3060 is shown right. The DDSS2060 (not shown) looks similar and has the same button/LED functions.

The buttons can be programmed as DSS, outside Line, All Call Page, Night Transfer, and Station or System Speed Dial. LEDs on the DSS light or flash red or green, depending on the status.

Note Button numbers in the above figure are examples only.

DSS Buttons

DSS buttons can appear on both the DADM and DSS Console. Each DSS button is associated with a particular station in your telephone system. DSS buttons can transfer an outside call to the associated station or make a direct call to the associated station.

The DSS LED lights steady red when the station associated with the DSS button is ringing, busy on a call, or when the associated station is idle, but all appearances of the station's extensions are busy or in-use by other stations. When the associated DSS button is in the Do Not Disturb mode, the LED blinks red at a slow rate.

DSS buttons cannot call station Phantom extension numbers, Distributed Hunt Group Directory Numbers, or ACD Groups. DSS buttons may be configured as One Touch Buttons that may be programmed to call these destinations

Features

The LED colors described in this section apply to the DADM3020 and DDSS3060. Described Flash conditions apply to all DSS console models and the DADM.

Calling a Station

- To call a station's extension from either a DSS console or a DADM, press the DSS associated with the station.

A station call with a DSS button can be made on-hook or off-hook, and with Voice First or Tone signaling. After pressing the button, treat the call like any other station call made from a digital telephone.

DSS LEDs indicate whether the associated station is idle or busy. The LED is steady red if the station is busy or ringing, and is not lit if idle. If all the station's PDN buttons are being used by other stations, the DSS LED of the station is lit steady red, but the station may be idle. If the station is in the Do Not Disturb mode, its DSS LED lights blinking red.

Transferring to an Idle Station

You can transfer internal or outside calls to an idle station from either a DSS console or a DADM.

➤ To transfer a call to an idle station

1. Press the DSS button corresponding to the station to be called.

The call is placed automatically on hold. The Line or extension LED flashes green at double the on-hold rate, and the DSS LED flashes green. You hear a single ring tone. (If using the Tone signaling mode, you hear successive ring tones.)

2. Announce the call.

With Tone signaling, you would have to wait for the called station to answer before announcing the call.

3. Hang up.

The call rings the called station when you hang up. While the called station is ringing, the DSS LED is steady red, and the Line LED flashes green at the on-hold rate or if on an extension button, it goes idle.

When the called station answers the call, the DSS LED stays steady red, and the Line LED becomes steady red.

4. If the station does not answer before a period set in system programming, the call recalls your station.

Call Transfer with Camp-on

You can transfer a call to a busy station from either a DSS console or an DADM. Use the DSS to transfer the call, even though the DSS LED associated with the station you are “transferring to” is red.

► To transfer call to a busy station

1. Press DSS corresponding to the busy station to be called.

You may hear a busy tone. The original caller is placed automatically on hold. The Line or extension LED flashes green at double the on-hold rate, and the DSS LED remains steady red.

2. Hang up.

The call rings the called station once with the camp-on tone. While the called station is receiving this tone, the Line LED flashes green (on-hold rate) or if you are on a extension button, it goes idle. The [DSS] LED remains steady red.

When the called station answers the transferred call, the Line LED becomes steady red. The [DSS] LED remains steady red.

Note If the busy station is in the Do Not Disturb mode, the call will not transfer, but will recall your telephone immediately.

If the call is not answered after a specified Recall time set in system programming, camp-on is cancelled and the transferred call rings back.

Call Answering (Outside Line)

If your DADM or DSS console is equipped with a **Line** button, you can answer outside line calls from the DADM or DSS console as you would from a digital telephone.

- To answer an incoming outside line call to a DADM or DSS Console, press the flashing **Line**.

Speed Dial

Your DADM or DSS console may be equipped with **SD** (Speed Dial) buttons that can be programmed to dial telephone numbers or to access features. **SD** buttons on either the DADM or DSS console function like **SD** buttons on digital telephones.

Paging

You can make an announcement page to a group of telephone speakers selected in system programming with **All Call Page** on the DSS console. **SD** (if programmed) on either the DSS console or the DADM can be used for page announcements. See [“All Call Page” on page 45](#).

Call Forward Override (DSS Override)

Either the DSS buttons on your DSS console or the associated telephone can be set in system programming to ring stations that are in the Call Forward mode, instead of being forwarded. Usually the console's telephone is the unit activated to perform this function. Among other applications, this feature can be used to notify a person who forgets to deactivate the Call Forward feature after returning to the office.

► To override call forward with the console's associated telephone

1. Press **Cnf/Trn** or extension button.
2. Dial the station number set for call forward.

Make the call as you would from any other station. This procedure assumes your station has a typical program setting.

► To override call forward with your DSS Console

- Press the station DSS button set for Call Forward.

Night Transfer Button

This button enables a pre-programmed station to place the system into Day, Day2 or Night Mode. See your System Administrator for information on the settings for Day, Day2 or Night Mode. Usually, these modes will transfer calls to a designated location or voice mailbox, depending on programming.

1. Press **Night Transfer**.
2. Press the desired Mode number:
 - Press **1** for Day Mode (LED remains off).
 - Press **2** for Day2 Mode (LED flashes red).
 - Press **3** for Night Mode (LED is solid red).

Centrex Application

A

Your system may be equipped with the Centrex Application, which enhances its feature capability when installed behind a Centrex or PBX system. Your telephone may have access to one or more of the enhanced Centrex features listed below:

Flexible Directory Numbering

A station's extension can be three or four digits. It is, therefore, possible to match a station's extension and Centrex line extension number. Dial the entire station number when indicated.

Note Some access code numbers may have been changed to avoid system numbering plan conflicts.

Centrex Feature Buttons

You can access some Centrex features by pressing a pre-programmed Flexible Button on your telephone, instead of dialing a Centrex access code. The Centrex access code, including the necessary flash and/or pause sequence, is activated when the button is pressed. See your Centrex or PBX operations manual for specific details.

Ringling Repeat

The distinctive ring patterns available in your Centrex system are automatically repeated with your digital telephone, enabling you to answer appropriately for either outside, inside or callback calls.

Delayed Ringing

Outside line or Centrex line(s) can be programmed for a 12-second and/or 24-second ring delay at stations to permit alternate answering conditions. Answer the line when your telephone is ringing.

Button Labels

B

All Flexible Buttons must be programmed for your telephone in system programming and vary for individual telephones. If a button does not appear on your display or telephone keystrip label, see your CTX System Administrator for button assignments.

The button labels in [Table 12](#) are for the Programmable Buttons on your telephone. Programmable buttons are the unmarked buttons on your keystrip.

Table 12 Feature Button Definitions

Button	Definitions
Account Code	Account Code – Press to enter a Voluntary Account Code anytime during a Central Office (outside) line call without interrupting the conversation.
All Call Page	All Call Voice Page – Press to page all of the telephones in the All Call Page group.
Auto Busy Redial	Automatic Busy Redial – Press to set up Automatic Busy Redial after receiving a busy tone on a dialed outside line call (not available when calling on Tie or Direct Inward Dialing (DID) outside lines).
Auto Callback	Automatic Callback – Press to recall a busy station or station in the Do Not Disturb (Do Not Disturb) mode as soon as that station becomes idle or deactivates Do Not Disturb. Also used for outside line queuing when all lines are busy.
Call Frwd All Calls	Call Forward-All Calls – Press to forward all calls to another station or voice mail device.
Call Frwd Busy	Call Forward-Busy – Press to forward calls immediately to another station or voice mail device when your station is busy or in the Do Not Disturb mode.
Call Frwd Busy NAns	Call Forward-Busy/No Answer – Press to forward calls immediately to another station or voice mail device when your station is busy or in Do Not Disturb mode. Also forwards calls when your station is not answered after 8-60 seconds (set at your station).

Delayed Ringing

Table 12 Feature Button Definitions (continued)

Button	Definitions
Call Frwd No Answer	Call Forward-No Answer – Press to forward calls to another station or voice mail device when your station is not answered after 8–60 seconds (set at your station).
Call Frwd External	Call Forward-External – Press to forward Private or DID line calls to an external or internal telephone number.
Caller ID	Caller ID – Press to view the Call History list (may include name/number, date, status).
Directed Pickup	Call Pickup – Press to initiate a ringing Directed Call Pickup of outside line, extension, and page calls.
Do Not Disturb	Do Not Disturb – Press to lock your station in or out of the Do not Disturb mode.
DSS	Direct Station Selection(s) – Press to ring a preselected station. The LED associated with each DSS button provides the status (idle/busy) of the station assigned to the button.
Flash	Flash – Press to perform the following functions: Disconnect and recall dial tone on a outside line; access Centrex or PBX features; enter a pause or flash signal when programming speed dial numbers.
Group Pickup	Group Pickup – Press to pick up a call that is ringing a station that belongs to a Pickup Group that your station is a member of.
Line	Line – Press to answer or access an outside line.
Msg Wait	Additional Messages Waiting
Night Transfer	Press to control the system's outside line ringing pattern for after-hours incoming calls.
Park in Orbit	Park – Press to park internal or outside calls in an orbit. Call retrieval can be made locally from the same parking telephone or remotely from a different telephone.
Pooled Line Grp	Pooled Line – Press to access an available outside line from a group of lines appearing under one button.
Privacy on Line	Privacy – Press to block Privacy Override on common outside line buttons. This button does not block Busy Override or Executive Override.
Privacy Release	Privacy Release – Press to release privacy on common outside line buttons, enabling other station users to enter your conversations on those buttons. Privacy release does not apply to common extension buttons which are always private.
Program	Program – Press to enter User Programming mode, which enables you to re-define Flexible Buttons to perform other functions, including programming One Touch and Flexible Buttons, register Call Forward assignments, assign Message Waiting Keys and assign BGM sources played over the telephone speaker.

Table 12 Feature Button Definitions *(continued)*

Button	Definitions
PS/RES	Pause/Resume – Press to pause or resume recording a conversation to a voice mailbox or when playing back the recording.
Record	Record to Voice Mail – Press to record current conversation to voice mailbox.
Release and Ans	Release and Answer – Press to disconnect or complete the transfer the current outside or extension call and automatically answer the new incoming outside or extension call.
Release Call	Release – Press to disconnect or complete the transfer of the current outside or extension call and to place your station in the idle condition.
SD or Customized Button	Speed Dial – Press to Speed Dial a telephone number or feature access codes. SD buttons can be used as either System Speed Dial numbers or Station Speed Dial numbers.
Spd Dial Lng Pause	Pause (Long) – Press to insert a 10-second pause when programming Speed Dial numbers.
Spd Dial Pause	Pause – Press to set either a one-half or two-second pause when programming Speed Dial numbers. (The pause time is set in system programming).
Start	Start – Press to make an outgoing call using an ISDN trunk.
Sub	Sub address – Press to enter a sub address on an ISDN trunk outgoing call.
Tel Set Music	Background Music – Press to turn Background Music on or off over your station speaker.
Tone Dial Select	Tone – Press to change the outgoing dialing of the outside line in use from dial pulse to tone signaling.
Unlock Door	Door Unlock – Press to unlock a door lock mechanism.
