Preface

General Precautions

Chapter 1 Getting Started

Equipment checklist	1-1
Getting Started	1-3
System Recovery Options and Restoring the preinstalled software.....	1-12

Chapter 2 The Grand Tour

Front with the display closed	2-1
Right side	2-2
Left side.....	2-3
Back.....	2-5
Underside	2-5
Front with the display open.....	2-7
Indicators	2-10
Optical disc drives	2-13
Remote Controller	2-16
Using the Remote Controller.....	2-22
Installing/Removing batteries	2-23
AC adaptor	2-28

Chapter 3 Hardware, Utilities and Options

Hardware.....	3-1
Special features	3-9
TOSHIBA Value Added Package.....	3-12
Utilities and Applications	3-13
Optional devices.....	3-17
Bridge media slot.....	3-19
Optional accessories.....	3-38

Chapter 4 Operating Basics

Using the Touch Pad	4-1
Touch Pad Gesture.....	4-2
Web Camera	4-3

	Using TOSHIBA Web Camera Application	4-4
	Using the TOSHIBA Face Recognition	4-5
	Using optical disc drive	4-8
	Writing CD/DVD/BD on DVD Super Multi drive or BD-Writer drive or BD-Combo drive	4-12
	Using WinDVD BD for TOSHIBA	4-25
	Media care	4-26
	Sound System	4-28
	Realtek HD Audio Manager	4-28
	Wireless communications	4-31
	LAN	4-34
	Computer Handling	4-36
	Using the Hard Disk Drive (HDD) Protection	4-37
	Using the TOSHIBA Sleep Utility	4-39
	Heat dispersal	4-42
<i>Chapter 5</i>	The Keyboard	
	Typewriter keys	5-1
	Function keys: F1 ... F12	5-2
	Soft keys: FN key combinations	5-2
	Hot keys	5-3

Any other use beyond that stipulated above (including conversion to digital format, alteration, transfer of copied material and distribution on a network) without the permission of the copyright owner is a violation of copyright or author's rights and is subject to civil damages or criminal action. Please comply with copyright laws in making any reproduction from this manual.

Disclaimer

This manual has been validated and reviewed for accuracy. The instructions and descriptions it contains are accurate for the TOSHIBA Satellite A660/A660D, Satellite A665/A665D Series Portable Personal Computer at the time of this manual's production. However, succeeding computers and manuals are subject to change without notice. TOSHIBA assumes no liability for damages incurred directly or indirectly from errors, omissions or discrepancies between the computer and the manual.

Trademarks

IBM is a registered trademark and IBM PC is a trademark of International Business Machines Corporation.

Intel, Intel SpeedStep, Intel Core and Centrino are trademarks or registered trademarks of Intel Corporation.

Windows, Microsoft and Windows logo are registered trademarks of Microsoft Corporation.

Bluetooth is a trademark owned by its proprietor and used by TOSHIBA under license.

Photo CD is a trademark of Eastman Kodak Company.

Memory Stick, Memory Stick PRO, Memory Stick PRO Duo and i.LINK are trademarks or registered trademarks of Sony Corporation.

ConfigFree is a trademark of Toshiba Corporation.

Wi-Fi is a registered trademark of the Wi-Fi Alliance.

Secure Digital and SD are trademarks of SD Card Association.

MultiMediaCard and MMC are trademarks of MultiMediaCard Association.

xD-Picture Card is a trademark of FUJIFILM Corporation.

Other trademarks and registered trademarks not listed above may be used in this manual.

Manufactured under license from Dolby Laboratories. Dolby and the double-D symbol are trademarks of Dolby Laboratories.

EU Declaration of Conformity

This product is carrying the CE-Mark in accordance with the related European Directives. Responsible for CE-Marking is TOSHIBA Europe GmbH, Hammfelddamm 8, 41460 Neuss, Germany. The complete and official EU Declaration of Conformity can be found on TOSHIBA's web site <http://epps.toshiba-teg.com> on the Internet.

CE compliance

This product is labelled with the CE Mark in accordance with the related European Directives, notably Electromagnetic Compatibility Directive 2004/108/EC for the notebook and the electronic accessories including the supplied power adapter, the Radio Equipment and Telecommunications Terminal Equipment Directive 1999/5/EC in case of implemented telecommunication accessories and the Low Voltage Directive 2006/95/EC for the supplied power adapter. Furthermore the product complies with the Ecodesign Directive 2009/125/EC (ErP) and its related implementing measures.

This product and the original options are designed to observe the related EMC (Electromagnetic Compatibility) and safety standards. However, TOSHIBA cannot guarantee that this product still observes these EMC standards if options or cables not produced by TOSHIBA are connected or implemented. In this case the persons who have connected/implemented those options/cables have to provide assurance that the system (PC plus options/cables) still fulfils the required standards. To avoid general EMC problems, the following guidance should be noted:

- Only CE marked options should be connected/implemented
- Only best shielded cables should be connected

Working environment

This product was designed to fulfil the EMC (Electromagnetic Compatibility) requirements to be observed for so-called "Residential, commercial and light industry environments". TOSHIBA do not approve the use of this product in working environments other than the above mentioned "Residential, commercial and light industry environments".

For example, the following environments are not approved:

- Industrial Environments (e.g. environments where a mains voltage of 380 V three-phase is used)
- Medical Environments
- Automotive Environments
- Aircraft Environments

Any consequences resulting from the use of this product in working environments that are not approved are not the responsibility of TOSHIBA.

The consequences of the use of this product in non-approved working environments may be:

- Interference with other devices or machines in the near surrounding area.
- Malfunction of, or data loss from, this product caused by disturbances generated by other devices or machines in the near surrounding area.

Therefore TOSHIBA strongly recommend that the electromagnetic compatibility of this product should be suitably tested in all non-approved working environments before use. In the case of automobiles or aircraft, the manufacturer or airline respectively should be asked for permission before use of this product.

Furthermore, for general safety reasons, the use of this product in environments with explosive atmospheres is not permitted.

REACH - Compliance Statement

The new European Union (EU) chemical regulation, REACH (Registration, Evaluation, Authorization and Restriction of Chemicals), entered into force on 1 June 2007. Toshiba will meet all REACH requirements and is committed to provide our customers with information about the chemical substances in our products according to REACH regulation. Please consult the following website www.toshiba-europe.com/computers/info/reach for information about the presence in our articles of substances included on the candidate list according to article 59(1) of Regulation (EC) No 1907/2006 ("REACH") in a concentration above 0.1 % weight by weight.

Following information is only for Turkey:

- Compliant with EEE Regulations: Toshiba meets all requirements of Turkish regulation 26891 "Restriction of the use of certain hazardous substances in electrical and electronic equipment".
- The number of possible pixel failures of your display is defined according to ISO 13406-2 standards. If the number of pixel failures is less than this standard, they will not be counted as defect or failure.
- Battery is a consumption product, since the battery time depends on the usage of your computer. If the battery can not be charged at all, then it is a defect or failure. The changes in battery time is not a defect or failure.

Following information is only valid for EU-member States:

Disposal of products

The crossed out wheeled dust bin symbol indicates that products must be collected and disposed of separately from household waste. Integrated batteries and accumulators can be disposed of with the product. They will be separated at the recycling centres.

The black bar indicates that the product was placed on the market after August 13, 2005.

By participating in separate collection of products and batteries, you will help to assure the proper disposal of products and batteries and thus help to prevent potential negative consequences for the environment and human health.

For more detailed information about the collection and recycling programmes available in your country, please visit our website (<http://eu.computers.toshiba-europe.com>) or contact your local city office or the shop where you purchased the product.

Disposal of batteries and/or accumulators

Pb, Hg, Cd

The crossed out wheeled dust bin symbol indicates that batteries and/or accumulators must be collected and disposed of separately from household waste.

If the battery or accumulator contains more than the specified values of lead (Pb), mercury (Hg), and/or cadmium (Cd) defined in the Battery Directive (2006/66/EC), then the chemical symbols for lead (Pb), mercury (Hg) and/or cadmium (Cd) will appear below the crossed out wheeled dust bin symbol.

By participating in separate collection of batteries, you will help to assure the proper disposal of products and batteries and thus help to prevent potential negative consequences for the environment and human health.

For more detailed information about the collection and recycling programmes available in your country, please visit our website (<http://eu.computers.toshiba-europe.com>) or contact your local city office or the shop where you purchased the product.

These symbols may not stick depending on the country and region where you purchased.

Disposing of the computer and the computer's batteries

- Discard this computer in accordance with applicable laws and regulations. For further information, contact your local government.
- This computer contains rechargeable batteries. After repeated use, the batteries will finally lose their ability to hold a charge and you will need to replace them. Under certain applicable laws and regulation, it may be illegal to dispose of old batteries by placing them in the trash.
- Please be kind to our shared environment. Check with your local government authority for details regarding where to recycle old batteries or how to dispose of them properly. Disposal of this material may be regulated due to environmental considerations. For disposal, reuse or recycling information, please contact your local government.

ENERGY STAR® Program

Your computer model may be Energy Star® qualified. If the model you purchased is qualified, it is labeled with the ENERGY STAR logo on the computer and the following information applies.

TOSHIBA is a partner in the ENERGY STAR Program and has designed this computer to meet the latest ENERGY STAR guidelines for energy efficiency. Your computer ships with the power management options preset to a configuration that will provide the most stable operating environment and optimum system performance for both AC power and battery modes.

To conserve energy, your computer is set to enter the low-power Sleep Mode which shuts down the system and display within 15 minutes of inactivity in AC power mode. TOSHIBA recommends that you leave this and other energy saving features active, so that your computer will operate at its maximum energy efficiency. You can wake the computer from Sleep Mode by pressing the power button.

Products that earn the ENERGY STAR prevent greenhouse gas emissions by meeting strict energy efficiency guidelines set by the US EPA and the EU Commission. According to the EPA, a computer meeting the new ENERGY STAR specifications will use between 20% and 50% less energy depending on how it is used.

Visit <http://www.eu-energystar.org> or <http://www.energystar.gov> for more information regarding the ENERGY STAR Program.

Preface

Congratulations on your purchase of the Satellite A660/A660D, Satellite A665/A665D Series computer. This powerful notebook computer provides excellent expansion capability, includes multimedia functionality, and is designed to provide years of reliable, high-performance computing.

This manual tells how to set up and begin using your Satellite A660/A660D, Satellite A665/A665D Series computer. It also provides detailed information on configuring your computer, basic operations and care, using optional devices and troubleshooting.

If you are a new user of computers or if you're new to portable computing, first read over the Chapter 1, *Getting Started* and Chapter 3, *Hardware, Utilities and Options* chapters, to familiarize yourself with the computer's features, components and accessory devices. Then read Chapter 1, *Getting Started*, for step-by-step instructions on setting up your computer.

If you are an experienced computer user, please continue reading the preface to learn how this manual is organized, then become acquainted with this manual by browsing through its pages. Be sure to read the *Special features* section in Chapter 3, *Hardware, Utilities and Options*, to learn about features that are uncommon or unique to this computer, as well as the section on Chapter 7, *HW Setup*, to understand how to setup and configure these features.

Read Chapter 3, *Hardware, Utilities and Options*, if connecting optional products or external devices.

Conventions

This manual uses the following formats to describe, identify, and highlight terms and operating procedures.

Abbreviations

On first appearance, and whenever necessary for clarity, abbreviations are enclosed in parentheses following their definition. For example: Read Only Memory (ROM). Acronyms are also defined in the Glossary.

Icons

Icons identify ports, dials, and other parts of your computer. The indicator panel also uses icons to identify the components it is providing information on.

Keys

The keyboard keys are used in the text to describe many computer operations. A distinctive typeface identifies the key top symbols as they appear on the keyboard. For example, **ENTER** identifies the **ENTER** key.

Key operation

Some operations require you to simultaneously use two or more keys. We identify such operations by the key top symbols separated by a plus sign (+). For example, **CTRL + C** means you must hold down **CTRL** and at the same time press **C**. If three keys are used, hold down the first two and at the same time press the third.

ABC

When procedures require an action such as clicking an icon or entering text, the icon's name or the text you are to type in is represented in the typeface you see to the left.

Display

ABC

Names of windows or icons or text generated by the computer that appear on its display screen are presented in the type face you see to the left.

Messages

Messages are used in this manual to bring important information to your attention. Each type of message is identified as shown below.

Pay attention! A caution informs you that improper use of equipment or failure to follow instructions may cause data loss or damage your equipment.

Please read. A note is a hint or advice that helps you make best use of your equipment.

Indicates a potentially hazardous situation, which could result in death or serious injury, if you do not follow instructions.

Terminology

This term is defined in this document as follows:

Start

The word “**Start**” refers to the “” button in Windows 7.

HDD or Hard disk drive

Some models are equipped with a “Solid State Drive (SSD)” instead of a hard disk drive.

In this manual, the word “HDD” or “Hard disk drive” also refers to the SSD unless otherwise stated.

General Precautions

TOSHIBA computers are designed to optimize safety, minimize strain and withstand the rigors of portability. However, certain precautions should be observed to further reduce the risk of personal injury or damage to the computer.

Be certain to read the general precautions below and to note the cautions included in the text of the manual.

Provide adequate ventilation

- Always make sure your computer and AC adaptor have adequate ventilation and are protected from overheating when the power is turned on or when an AC adaptor is connected to a power outlet (even if your computer is in Sleep Mode). In this condition, observe the following:
 - Never cover your computer or AC adaptor with any object.
 - Never place your computer or AC adaptor near a heat source, such as an electric blanket or heater.
 - Never cover or block the air vents including those located at the base of the computer.
 - Always operate your computer on a hard flat surface. Using your computer on a carpet or other soft material can block the vents.
- Always provide sufficient space around the computer.
- Overheating your computer or AC adaptor could cause system failure, computer or AC adaptor damage or a fire, possibly resulting in serious injury.

Creating a computer-friendly environment

Place the computer on a flat surface that is large enough for the computer and any other items you are using, such as a printer.

Leave enough space around the computer and other equipment to provide adequate ventilation. Otherwise, they may overheat.

To keep your computer in prime operating condition, protect your work area from:

- Dust, moisture, and direct sunlight.
- Equipment that generates a strong electromagnetic field, such as stereo speakers (other than speakers that are connected to the computer) or speakerphones.
- Rapid changes in temperature or humidity and sources of temperature change such as air conditioner vents or heaters.
- Extreme heat, cold, or humidity.
- Liquids and corrosive chemicals.

Stress injury

Carefully read the *Instruction Manual for Safety and Comfort*. It contains information on the prevention of stress injuries to your hands and wrists that can be caused by extensive keyboard use. *Instruction Manual for Safety and Comfort* also includes information on work space design, posture and lighting that can help reduce physical stress.

Heat injury

- Avoid prolonged physical contact with the computer. If the computer is used for long periods, its surface can become very warm. While the temperature will not feel hot to the touch, if you maintain physical contact with the computer for a long time, for example if you rest the computer on your lap or if you keep your hands on the palm rest, your skin might suffer a low-heat injury.
- If the computer has been used for a long time, avoid direct contact with the metal plate supporting the various interface ports as this can become hot.
- The surface of the AC adaptor can become hot when in use but this condition does not indicate a malfunction. If you need to transport the AC adaptor, you should disconnect it and let it cool before moving it.
- Do not lay the AC adaptor on a material that is sensitive to heat as the material could become damaged.

Pressure or impact damage

Do not apply heavy pressure to the computer or subject it to any form of strong impact as this can damage the computer's components or otherwise cause it to malfunction.

ExpressCard overheating

Some ExpressCards can become hot during prolonged use which may result in errors or instability in the operation of the device in question. In addition, you should also be careful when you remove an ExpressCard that has been used for a long time.

Mobile phones

Please be aware that the use of mobile phones can interfere with the audio system. The operation of the computer will not be impaired in any way, but it is recommended that a minimum distance of 30cm is maintained between the computer and a mobile phone that is in use.

Instruction Manual for Safety and Comfort

All important information on the safe and proper use of this computer is described in the enclosed Instruction Manual for Safety and Comfort. Be sure to read it before using the computer.

Chapter 1

Getting Started

This chapter provides an equipment checklist, and basic information to start using your computer.

Some of the features described in this manual may not function properly if you use an operating system that was not pre-installed by TOSHIBA.

Equipment checklist

Carefully unpack your computer, taking care to save the box and packaging materials for future use.

Hardware

Check to make sure you have all the following items:

- Satellite A660/A660D, Satellite A665/A665D Series Portable Personal Computer
- AC adaptor and power cord (2-pin plug or 3-pin plug)
- Battery pack

Documentation

- Satellite A660/A660D, Satellite A665/A665D Series User's Manual
- Satellite A660/A660D, Satellite A665/A665D Series Quickstart
- Instruction Manual for Safety and Comfort (included in User's Manual)
- Warranty information

If any of the items are missing or damaged, contact your dealer immediately.

Software

The following Windows® operating system and utility software are pre-installed.

- Windows 7
- TOSHIBA Value Added Package
- TOSHIBA Hardware Setup
- TOSHIBA Flash Cards Support Utility
- TOSHIBA Supervisor Password
- TOSHIBA Recovery Media Creator
- TOSHIBA DVD PLAYER
- Corel DVD MovieFactory for TOSHIBA (preinstalled with some models)
- WinDVD BD for TOSHIBA (preinstalled with some models)
- TOSHIBA Assist
- TOSHIBA ConfigFree™
- TOSHIBA HDD Protection
- TOSHIBA Disc Creator
- TOSHIBA Face Recognition
- TOSHIBA eco Utility
- TOSHIBA PC Health Monitor
- TOSHIBA Sleep Utility

* You may not have all the softwares listed above depending on the model you purchased.

Getting Started

- All users should be sure to read the section [Starting up for the first time](#).
- Be sure to read the enclosed *Instruction Manual for Safety and Comfort* for information on the safe and proper use of this computer. It is intended to help you be more comfortable and productive while using a notebook computer. By following the recommendations in it you may reduce your chance of developing a painful or disabling injury to your hand, arms, shoulders or neck.

This section provides basic information to start using your computer. It covers the following topics:

- Connecting the AC adaptor
- Opening the display
- Turning on the power
- Starting up for the first time
- Turning off the power
- Restarting the computer
- System Recovery Options and Restoring the preinstalled software

- Use a virus-check program and make sure it is updated regularly.
- Never format storage media without checking its content - formatting destroys all stored data.
- It is a good idea to periodically back up the internal hard disk drive or other main storage device to external media. General storage media is not durable or stable over long periods of time and under certain conditions may result in data loss.
- Before you install a device or application, save any data in memory to the hard disk drive or other storage media. Failure to do so may result in the loss of data.

Connecting the AC adaptor

Attach the AC adaptor when you need to charge the battery or you want to operate from AC power. It is also the fastest way to get started, because the battery pack will need to be charged before you can operate from battery power.

The AC adaptor can be connected to any power source supplying from 100 to 240 volts and 50 or 60 hertz. For details on using the AC adaptor to charge the battery pack, refer to Chapter 6, [Power and Power-Up Modes](#).

- *Always use the TOSHIBA AC adaptor that was included with your computer, or use AC adaptors specified by TOSHIBA to avoid any risk of fire or other damage to the computer. Use of an incompatible AC adaptor could cause fire or damage to the computer possibly resulting in serious injury. TOSHIBA assumes no liability for any damage caused by use of an incompatible adaptor.*
- *Never plug the AC adaptor into a power source that does not correspond to both the voltage and the frequency specified on the regulatory label of the unit. Failure to do so could result in a fire or electric shock, possibly resulting in serious injury.*
- *Always use or purchase power cables that comply with the legal voltage and frequency specifications and requirements in the country of use. Failure to do so could result in a fire or electric shock, possibly resulting in serious injury.*
- *The supplied power cord conforms to safety rules and regulations in the region the product is bought and should not be used outside this region. For use in other regions, please buy power cords that conform to safety rules and regulations in the particular region.*
- *Do not use a 3-pin to 2-pin conversion plug.*
- *When you connect the AC adaptor to the computer, always follow the steps in the exact order as described in the User's Manual. Connecting the power cable to a live electrical outlet should be the last step otherwise the adaptor DC output plug could hold an electrical charge and cause an electrical shock or minor bodily injury when touched. As a general safety precaution, avoid touching any metal parts.*
- *Never place your computer or AC adaptor on a wooden surface, furniture, or any other surface that could be marred by exposure to heat since the computer base and AC adaptor's surface increase in temperature during normal use.*
- *Always place your computer or AC adaptor on a flat and hard surface that is resistant to heat damage.*

Refer to the enclosed Instruction Manual for Safety and Comfort for detailed precautions and handling instructions.

1. Connect the power cord to the AC adaptor.

Figure 1-1 Connecting the power cord to the AC adaptor (2-pin plug)

Figure 1-2 Connecting the power cord to the AC adaptor (3-pin plug)

Either a 2-pin or 3-pin adaptor/cord will be included with the computer depending on the model.

2. Connect the AC adaptor's DC output plug to the DC IN 19V jack on the right of the computer.

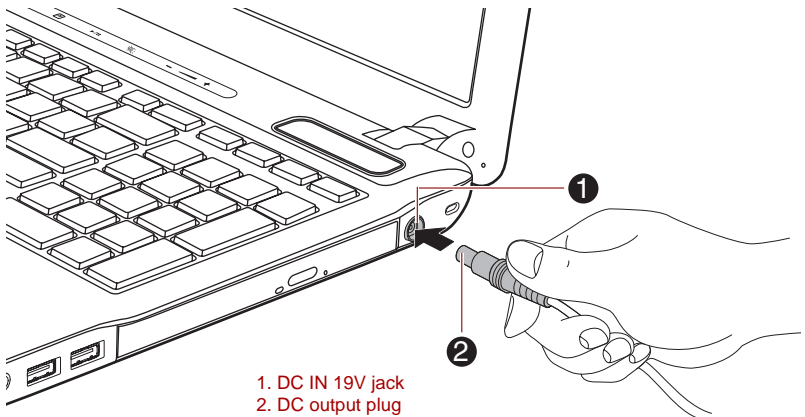

Figure 1-3 Connecting the DC output plug to the computer

3. Plug the power cord into a live wall outlet - the **Battery** and **DC IN** indicators on the front of the computer should glow.

Opening the display

The display panel can be opened to a wide range of angles for optimal viewing.

While holding down the palm rest with one hand so that the main body of the computer is not raised, slowly lift the display panel - this will allow the angle of the display panel to be adjusted to provide optimum clarity.

Figure 1-4 Opening the display panel

Use reasonable care when opening and closing the display panel. Opening it vigorously or slamming it shut could damage the computer.

- Be careful not to open the display panel too far as this could put stress on the display panel's hinges and cause damage.
- Do not press or push on the display panel.
- Do not lift the computer by the display panel.
- Do not close the display panel with pens or any other objects left in between the display panel and the keyboard.
- When opening or closing the display panel, place one hand on the palm rest to hold the computer in place and use the other hand to slowly open or close the display panel (Do not use excessive force when opening or closing the display panel).

Turning on the power

This section describes how to turn on the power - the **Power** indicator will then indicate the status. Please refer to the [Monitoring of power condition](#) section in Chapter 6, [Power and Power-Up Modes](#), for more information.

- After you turn on the power for the first time, do not turn it off until you have set up the operating system. Please refer to the section [Starting up for the first time](#) for more information.
- Volume cannot be adjusted during Windows Setup.

1. Open the display panel.
2. Press and hold the computer's power button for one or two seconds.

Figure 1-5 Turning on the power

Starting up for the first time

The Windows 7 Startup Screen will be the first screen displayed when you turn on the power. Follow the on-screen instructions on each screen in order to properly install the operating system.

- When it is displayed, be sure to read the **Software License Terms** carefully.

Turning off the power

The power can be turned off in one of three modes, either Shut Down Mode, Hibernation Mode or Sleep Mode.

Shut Down Mode

When you turn off the power in Shut Down Mode no data will be saved and the computer will boot to the operating system's main screen the next time it is turned on.

1. If you have entered data, either save it to the hard disk drive or to other storage media.
2. Make sure all disk/disc activity has stopped before removing the CD/DVD or floppy diskette.

- *Make sure the **Hard Disk Drive/Optical Disc Drive** indicators are off. If you turn off the power while a disk (disc) is being accessed, you may lose data or damage the disk.*
- *Never turn off the power while an application is running. Doing so could cause loss of data.*
- *Never turn off the power, disconnect an external storage device or remove storage media during data read/write. Doing so can cause data loss.*

3. Click **Start**.
4. Click the **Shut down** button ().
5. Turn off any peripheral devices connected to your computer.

Do not turn the computer or peripheral devices back on immediately - wait a short period to avoid any potential damage.

Sleep Mode

If you have to interrupt your work, you are able to turn off the power without exiting from your software by placing the computer into Sleep Mode. In this mode data is maintained in the computer's main memory so that when you turn on the power again, you can continue working right where you left off.

When you have to turn off your computer aboard an aircraft or in places where electronic devices are regulated or controlled, always completely shut down the computer. This includes turning off any wireless communication functionalities and canceling settings that reactivate the computer automatically, such as a timer recording function. Failure to completely shut down the computer in this way could allow the operating system to reactivate and run pre-programmed tasks or preserve unsaved data, which could interfere with aviation or other systems, possibly causing serious injury.

- Before entering Sleep Mode, be sure to save your data.
- Do not install or remove a memory module while the computer is in Sleep Mode. The computer or the memory module could be damaged.
- Do not remove the battery pack while the computer is in Sleep Mode (unless the computer is connected to an AC power source). Data in memory could be lost.

- When the AC adaptor is connected, the computer will go into Sleep Mode according to the settings in the Power Options (to access it, **Start -> Control Panel -> System and Security -> Power Options**).
- To restore the operation of the computer from Sleep Mode, press and hold the power button or any key on the keyboard for a short amount of time. Please note that keyboard keys can only be used if the Wake-up on Keyboard option is enabled within the HW Setup utility.
- If the computer enters Sleep Mode while a network application is active, the application might not be restored when the computer is next turned on and the system returns from Sleep Mode.
- To prevent the computer from automatically entering Sleep Mode, disable Sleep Mode within the Power Options (to access it, **Start -> Control Panel -> System and Security -> Power Options**).
- To use the Hybrid Sleep function, configure it in the Power Options.

Benefits of Sleep Mode

The Sleep Mode feature provides the following benefits:

- Restores the previous working environment more rapidly than does the Hibernation Mode feature.
- Saves power by shutting down the system when the computer receives no input or hardware access for the time period set by the System Sleep Mode feature.
- Allows the use of the panel power off feature.

Executing Sleep Mode

You can also enable Sleep Mode by pressing **FN + F3** - please refer to Chapter 5, [The Keyboard](#), for further details.

You can enter Sleep Mode in one of three ways:

- Click **Start**, point to the arrow icon () and then select **Sleep** from the menu.
- Close the display panel. Please note that this feature must be enabled within the Power Options (to access it, click **Start -> Control Panel -> System and Security -> Power Options**).
- Press the power button. Please note that this feature must be enabled within the Power Options (to access it, click **Start -> Control Panel -> System and Security -> Power Options**).

When you turn the power back on, you can continue where you left when you shut down the computer.

- *When the computer is in Sleep Mode, the power indicator will blink amber.*
- *If you are operating the computer on battery power, you can lengthen the overall operating time by turning it off into Hibernation Mode - Sleep Mode will consume more power while the computer is off.*

Sleep Mode limitations

Sleep Mode will not function under the following conditions:

- Power is turned back on immediately after shutting down.
- Memory circuits are exposed to static electricity or electrical noise.

Hibernation Mode

The Hibernation Mode feature saves the contents of memory to the hard disk drive when the computer is turned off so that, the next time it is turned on, the previous state is restored. Please note that the Hibernation Mode feature does not save the status of any peripheral devices connected to the computer.

- *Save your data. While entering Hibernation Mode, the computer saves the contents of memory to the hard disk drive. However, for safety sake, it is best to save your data manually.*
- *Data will be lost if you remove the battery or disconnect the AC adaptor before the save is completed. Wait for the **Hard Disk Drive** indicator to go out.*
- *Do not install or remove a memory module while the computer is in Hibernation Mode. Data will be lost.*

Benefits of Hibernation Mode

The Hibernation Mode feature provides the following benefits:

- Saves data to the hard disk drive when the computer automatically shuts down because of a low battery condition.
- You can return to your previous working environment immediately when you turn on the computer.
- Saves power by shutting down the system when the computer receives no input or hardware access for the time period set by the System Hibernate feature.
- Allows the use of the panel power off feature.

Starting Hibernation Mode

You can also enable Hibernation Mode by pressing **FN + F4** - please refer to Chapter 5, [The Keyboard](#), for further details.

To enter Hibernation Mode, follow the steps below.

1. Click **Start**.
2. Point to the arrow icon () and then select **Hibernate** from the menu.

Automatic Hibernation Mode

The computer can be configured to enter Hibernation Mode automatically when you press the power button or close the lid. In order to define these settings, you can follow the steps as described below:

1. Click **Start** and click the **Control Panel**.
2. Click **System and Security** and click **Power Options**.
3. Click **Choose what the power button does** or **Choose what closing the lid does**.
4. Enable the desired Hibernation Mode settings for **When I press the power button** and **When I close the lid**.
5. Click the **Save changes** button.

Data save in Hibernation Mode

When you turn off the power in Hibernation Mode, the computer will take a moment to save the current data in memory to the hard disk drive. During this time, the **Hard Disk Drive** indicator will glow.

After you turn off the computer, and the content of memory has been saved to the hard disk drive, turn off the power to any peripheral devices.

Do not turn the computer or devices back on immediately. Wait a moment to let all capacitors fully discharge.

Restarting the computer

Certain conditions require that you reset the computer, for example if:

- You change certain computer settings.
- An error occurs and the computer does not respond to your keyboard commands.

If you need to restart the computer, there are three ways this can be achieved:

- Click **Start**, point to the arrow icon () and then select **Restart** from the menu.
- Press **CTRL**, **ALT** and **DEL** simultaneously (once) to display the menu window, then select **Restart** from the **Shut down options**.
- Press the power button and hold it down for four seconds. Once the computer has turned itself off, wait between ten and fifteen seconds before turning the power on again by pressing the power button.

System Recovery Options and Restoring the preinstalled software

About 1.5GB hidden partition is allocated on the hard drive for the System Recovery Options.

The System Recovery Options feature will be unusable if this partition is deleted.

System Recovery Options

The System Recovery Options feature is installed on the hard disk when shipped from the factory. The System Recovery Options menu includes some tools to repair startup problems, run diagnostics or restore the system.

You can see the more information about “Startup Repair” in “Windows Help and Support” content.

The System Recovery Options can also be run manually to repair problems.

The procedure is as follows. Follow the on-screen instructions.

1. Turn off the computer.
2. While holding the **F8** key, turn the computer on. The **Advanced Boot Options** menu will be displayed.
3. Use the arrow keys to select **Repair Your Computer** and press **Enter**.
4. Follow the on-screen instructions.

The Windows Complete PC Backup feature can be used on all Windows® 7 editions.

Restoring the pre-installed Software

Depending on the model you purchased, different ways for restoring the pre-installed software are offered:

- Creating optical Recovery Discs and restoring the pre-installed software from them
- Restoring the pre-installed software from the Recovery hard disk drive
- Ordering Recovery Discs from TOSHIBA and restoring the pre-installed software from them*

* Please note that this service is not free-of-charge.

Creating Optical Recovery Discs

This section describes how to create Recovery Discs.

- *Be sure to connect the AC adaptor when you create Recovery Discs.*
- *Be sure to close all other software programs except the TOSHIBA Recovery Media Creator.*
- *Do not run software such as screen savers which can put a heavy load on the CPU.*
- *Operate the computer at full power.*
- *Do not use power-saving features.*
- *Do not write to the disc when the anti-virus software is running. Wait for it to finish, then disable virus detection programs including any software that checks files automatically in the background.*
- *Do not use utilities, including those intended to enhance hard disk drive access speed. They may cause unstable operation and damage data.*
- *Do not shut down/log off or Sleep/Hibernate while writing or rewriting the disc.*
- *Set the computer on a level surface and avoid places subjected to vibrations such as airplanes, trains, or cars.*
- *Do not use on unstable tables or other any other unstable surfaces.*

A recovery image of the software on your computer is stored on the hard disk drive, and can be copied to DVD media by using the following steps:

1. Have a blank DVD media ready.
2. The application will allow you to choose from a variety of different media onto which the recovery image can be copied including DVD-R, DVD-R DL, DVD-RW, DVD+R, DVD+R DL and DVD+RW.

Please note that some of the above media may not be compatible with the optical disc drive installed into your computer. You should therefore verify the optical disc drive supports the blank media you have chosen before proceeding.

3. Turn on your computer and allow it to load the Windows 7 operating system from the hard disk drive as normal.
4. Insert the first blank media into the optical disc drive tray.

5. Select the **TOSHIBA Recovery Media Creator** icon from the Windows 7 **Start** menu.
6. After TOSHIBA Recovery Media Creator starts, select the type of media and the title you wish to copy, and then click the **Create** button.

Restoring the pre-installed software from your created Recovery Discs

If the pre-installed files are damaged, you are able to either use the Recovery Discs you have created to restore the computer to the state it was in when you originally received it. To perform this restoration, follow the steps below:

*When the sound mute feature has been activated by pressing the **FN + ESC** key, be sure to disable this to allow sounds to be heard before starting the restore process. Please refer to Chapter 5, [The Keyboard](#), for further details.*

You can not use System Recovery Options if restoring the pre-installed software without System Recovery Options.

When you reinstall the Windows operating system, the hard disk will be reformatted and all data will be lost.

1. Load the (1st disc of) Recovery Discs into the optical disc drive and turn off the computer's power.
2. While holding down **F12** key on the keyboard, turn on your computer - when **TOSHIBA Leading Innovation>>>** appears, release the **F12** key.
3. Use the up and down cursor keys to select the CD-ROM icon from the menu.
4. A menu will be displayed from which you should follow the on-screen instructions.

Restoring the pre-installed software from the Recovery hard disk drive

A portion of the total hard disk drive space is configured as a hidden recovery partition. This partition stores files which can be used to restore pre-installed software in the event of a problem.

If you subsequently set up your hard disk drive again, do not change, delete or add partitions in a manner other than specified in the manual, otherwise you may find that space for the required software is not available.

In addition, if you use a third-party partitioning program to reconfigure the partitions on your hard disk drive, you may find that it becomes impossible to setup your computer.

When the sound mute feature has been activated by pressing the Mute panel (**Fn + ESC**), be sure to disable this to allow sounds to be heard before starting the restore process. Please refer to Chapter 5, [The Keyboard](#), for further details.

You can not use System Recovery Options if restoring the pre-installed software without System Recovery Options.

When you reinstall the Windows operating system, the hard disk will be reformatted and all data will be lost.

1. Turn off your computer.
2. While holding down **0** (zero) key on the keyboard, turn on your computer.

A menu will be displayed from which you should follow the on-screen instructions.

Please set your BIOS to default before you recover your computer to the factory state!

Ordering Recovery Discs from TOSHIBA*

You can order Product Recovery discs for your notebook from the TOSHIBA Europe Backup Media Online Shop.

* Please note that this service is not free-of-charge.

1. Visit <http://backupmedia.toshiba.eu> on the Internet.
2. Follow the on-screen instructions.

You will receive your Recovery Discs within two weeks after placing your order.

Chapter 2

The Grand Tour

This chapter identifies the various components of the computer - it is recommended that you become familiar with each before you operate the computer.

Legal Footnote (Non-applicable Icons)*1

For more information regarding Non-applicable Icons, please refer to the Legal Footnotes section in Appendix G or click the *1 above.

Please handle your computer carefully to avoid scratching or damaging the surface.

Front with the display closed

The following figure shows the computer's front with its display panel in the closed position.

1. Infrared Receiver Window*
2. Bridge media slot
3. System indicators

* Provided with some models.
Product appearance depends on the model you purchased.

Figure 2-1 Front of the computer with display panel closed

Infrared Receiver Window

This is a sensor window that receives signals from the remote control which is provided with your computer.

Bridge media slot

This slot lets you insert an SD™/SDHC™/SDXC™ memory card, Memory Stick® (PRO™), xD-Picture Card™ and MultiMediaCard™. Refer to the [Optional devices](#) section in Chapter 3, *Hardware, Utilities and Options*.

Keep foreign metal objects, such as screws, staples and paper clips, out of the Bridge media slot. Foreign metal objects can create a short circuit, which can cause damage and fire, possibly resulting in serious injury.

System indicators

The LED system indicators for specific computer operations glow when those operations are in progress.

Right side

The following figure shows the computer's right side.

Product appearance depends on the model you purchased.

Figure 2-2 The right side of the computer

Headphone jack

This jack lets you connect digital speakers or a stereo headphone (16 ohm minimum). The internal speaker is automatically disabled when digital speakers or headphones are connected.

Microphone jack

A 3.5mm mini microphone jack enables connection of a three-conductor mini jack for stereo microphone input, and connection of a stereo device for audio input.

The jack with the icon (zzz) has [Sleep and Music](#) function.

Universal Serial Bus (USB 2.0) ports

Two Universal Serial Bus ports, which comply to the USB 2.0 standard, are provided on the right hand side of the computer.

Keep foreign metal objects, such as screws, staples and paper clips, out of the USB connectors. Foreign metal objects can create a short circuit, which can cause damage and fire, possibly resulting in serious injury.

Please note that it is not possible to confirm the operation of all functions of all USB devices that are available. In view of this it may be noted that some functions associated with a specific device might not operate properly.

Optical Disk Drive

The computer may be configured with a BD-Writer, BD-Combo or DVD Super Multi drive.

DC IN 19V jack

The AC adaptor connects to this jack in order to power the computer and charge its internal batteries. Please note that you should only use the model of AC adaptor supplied with the computer at the time of purchase - using the wrong AC adaptor can cause damage to the computer.

Security Lock Slot

A security cable can be attached to this slot and then connected to a desk or other large object in order to deter theft of the computer.

Left side

The following figure shows the computer's left side.

* Provided with some models.
 Product appearance depends on the model you purchased.

Figure 2-3 The left side of the computer

TV Tuner jack

TV Tuner enables watching and recording TV programs. Some models are equipped with the TV Tuner.

Cooling vents

The cooling vents allow air into the system to help keep the processor and other components from overheating.

Do not block the cooling vents. Keep foreign metal objects, such as screws, staples and paper clips, out of the cooling vents. Foreign metal objects can create a short circuit, which can cause damage and fire, possibly resulting in serious injury.

External Monitor port

This port allows you to connect an external monitor to the computer.

LAN jack

This jack lets you connect to a LAN. The adaptor has built-in support for Ethernet LAN (10 megabits per second, 10BASE-T), Fast Ethernet LAN (100 megabits per second, 100BASE-TX) and Gigabit Ethernet LAN (1000 megabits per second, 1000BASE-T). The LAN has two indicators. Refer to Chapter 4, [Operating Basics](#), for details.

- *Do not connect any cable other than a LAN cable to the LAN jack. It could cause damage or malfunction.*
- *Do not connect the LAN cable to a power supply. It could cause damage or malfunction.*

HDMI out port

HDMI out port can connect with Type A connector HDMI cable. HDMI cable can send video and audio signals. In addition to this, it can send and receive control signals.

eSATA/USB combo port

This Universal Serial Bus port, which complies to the USB 2.0 standard, is provided on the right hand side of the computer. The ports with the icon (⚡) has USB Sleep and Charge function. This port has eSATA (External Serial ATA) function.

Keep foreign metal objects, such as screws, staples and paper clips, out of the eSATA/USB combo port. Foreign metal objects can create a short circuit, which can cause damage and fire, possibly resulting in serious injury.

ExpressCard slot

This slot allows you to install a single ExpressCard device.

Universal Serial Bus (USB 2.0) port

One Universal Serial Bus port, which complies to the USB 2.0 standard, is provided on the left hand side of the computer. The ports with the icon (⚡) has *Sleep and Charge*.

Please note that it is not possible to confirm the operation of all functions of all USB devices that are available. In view of this it may be noted that some functions associated with a specific device might not operate properly.

Back

The following figure shows the computer's back.

Figure 2-4 The back of the computer

Underside

The following figure shows the underside of the computer. You should ensure that the display is closed before the computer is turned over to avoid causing any damage.

1. Battery lock
2. Battery pack
3. Battery release latch

4. Cooling vents
5. Memory module slot

Product appearance depends on the model you purchased.

Figure 2-5 The underside of the computer

Battery lock

Slide the battery lock to release the battery pack ready for removal.

Battery pack

The battery pack provides power to the computer when the AC adaptor is not connected. For more detailed information on the use and operation of the battery pack please refer to Chapter 6, [Power and Power-Up Modes](#).

Battery release latch

Slide and hold this latch into its “Unlock” position in order to release the battery pack for removal. For more detailed information on removing the battery pack please refer to Chapter 6, [Power and Power-Up Modes](#).

Cooling vents

The cooling vents help keep the processor from overheating.

Do not block the cooling vents. Keep foreign metal objects, such as screws, staples and paper clips, out of the cooling vents. Foreign metal objects can create a short circuit, which can cause damage and fire, possibly resulting in serious injury

Memory module slot

The memory module slot allows for the installation, replacement and removal of additional memory module. Refer to the [Additional memory module](#) section in Chapter 3, [Hardware, Utilities and Options](#).

Front with the display open

This section shows the computer with the display panel open. In order to open the display, lift the display panel up and position it at a comfortable viewing angle for you.

you purchased.

Figure 2-6 The front of the computer with the display panel open

Web Camera	<p>Web Camera is a device that allows you to record video or take photographs with your computer. You can use it for video chatting or video conferences using a communication tool such as Windows Live Messenger. TOSHIBA Web Camera Application will help you to add various video effects to your video or photograph.</p> <p>Enables the transmission of video and use of video chat via the internet using specialized applications.</p> <p>Some models are equipped with a Web Camera.</p> <p>Please refer to the Web Camera section in Chapter 4, Operating Basics.</p>
Web Camera LED	<p>The Web Camera LED glows when the Web Camera is operating.</p>
Microphone	<p>A built-in microphone allows you to import and record sounds for your application - please refer to the Sound System section in Chapter 4, Operating Basics, for more information. Some models are equipped with a microphone.</p>
Wireless LAN antennas	<p>Some computers in this series are equipped with the Wireless LAN antennas.</p>
Wireless WAN antennas	<p>Some computers in this series are equipped with the Wireless WAN antennas.</p>
Display screen	<p>Please be aware that, when the computer is operating on the AC adaptor, the image displayed on the internal screen will be somewhat brighter than when it operates on battery power. This difference in brightness levels is intended to save power when operating on batteries. For more information on the computer's display, please refer to the Display Controller and Video mode section in Appendix B.</p>
Display hinges	<p>The display hinges allow the display panel to be positioned at a variety of easy-to-view angles.</p>
Stereo speakers	<p>The speakers emit sound generated by your software as well as audio alarms, such as low battery condition, generated by the system. Some models are equipped with Harman/Kardon speakers.</p>

Keyboard	Your computer may intergrated with two kinds of keyboards: A4 size keyboard which provides the embedded numeric overlay keys, dedicated cursor control overlay keys, and  and  Keys; full size keyboard which provides dedicated numeric keys, dedicated cursor control keys, and  and  Keys. The keyboard is compatible with the IBM® enhanced keyboard. Refer to Chapter 5, The Keyboard , for details.
Touch Pad	The Touch Pad located in the palm rest is used to control the movement of the on-screen pointer. For more information, please refer to the Using the Touch Pad section in Chapter 4, Operating Basics .
Touch Pad control buttons	The control buttons located below the Touch Pad allow you to select menu items or manipulate text and graphics as designated by the on-screen pointer.
Touchpad Enable/Disable button	The Touchpad Enable/Disable button below the spacebar allows you to turn off the touchpad. Press the button again to enable the touchpad.
Power button	Press this button to turn the computer's power on and off.
Ambient Light Sensor	Automatically adjusts picture contrast to deliver the most viewable image under any room lighting conditions. By utilizing up to 8 different contrast settings, you will see the best picture possible in any room environment.
Function Buttons	Seven buttons are available for use: These buttons allow you to manage audio/video, run applications and access utilities.

Indicators

This section explains indicator functions.

System indicators

LED system indicators below their respective icons, glow when specific computer operations are in progress.

Figure 2-7 System indicators

DC IN

The **DC IN** indicator normally glows white when power is being correctly supplied from the AC power adaptor. However, If the output voltage from the adaptor is abnormal, or if the computer's power supply malfunctions, this indicator will flash amber.

Power

The **Power** indicator normally glows white when the computer is turned on. However, if you turn the computer off into Sleep Mode, this indicator will flash amber - approximately two second on, two seconds off - both while the system is shutting down and while it remains turned off.

Battery

The **Battery** indicator shows the condition of the battery's charge - white indicates the battery is fully charged, amber indicates the battery is charging, and flashing amber indicates a low battery condition. Please refer to Chapter 6, [Power and Power-Up Modes](#), for more information on this feature.

Hard Disk Drive/ Optical Disc Drive

The **Hard Disk Drive/Optical Disc Drive** indicator glows white whenever the computer is accessing the built-in hard disk drive, optical disc drive or eSATA device.

Bridge media slot

The **Bridge media slot** indicator glows white when the computer is accessing the Bridge media slot.

Wireless indicators

Wireless indicators below their respective icons, glow when specific computer operations are in progress.

Figure 2-8 Wireless indicators

Wireless communication

The **Wireless communication** indicator blinks amber when the Bluetooth, Wireless LAN and Wireless WAN functions are turned on.

Only some models are equipped with Bluetooth and Wireless LAN functions.

Wireless WAN

The Wireless WAN indicator glows or blinks blue when the Wireless WAN function is on.

The indicator will glow or blink in order to indicate the connection status of the Wireless WAN function.

A Wireless WAN module must be installed to use this function. Some models are equipped with a Wireless WAN module.

Keyboard indicators

Full size keyboard

The following figure shows the positions of the CAPS LOCK indicator and the NUM LOCK indicator, which show the following conditions:

- When the CAPS LOCK indicator glows, the keyboard will produce capitals when any letter is typed.
- When the NUM LOCK indicator glows, the ten key allows you to enter numbers.

Figure 2-9 Keypad indicators

CAPS LOCK

This indicator glows green when letter keys are locked into their uppercase format.

NUM LOCK

When the **NUM LOCK** indicator glows, you can use the number keys on the keyboard for number entry.

Optical disc drives

The computer is configured with a DVD Super Multi drive or BD-Writer or BD-Combo drive. A Serial ATA interface controller is used for 12cm(4.72") and 8cm(3.15") (Tray ODD) and 12cm(4.72") (Slot ODD) CD/DVD/BD operation. For further information on loading and unloading discs, please refer to the [Writing CD/DVD/BD on DVD Super Multi drive or BD-Writer drive or BD-Combo drive](#) section in Chapter 4, [Operating Basics](#).

Region codes for BD media

BD is manufactured according to the specifications of three marketing regions. When you purchase BD-Video (BDMV), make sure it matches your player, otherwise it will not play properly.

Code	Region
A	Canada, United States, Japan, Southeast Asia, East Asia, Central America, South America
B	Europe, Australia, New Zealand, Middle East, Africa
C	China, India, Russia, Mongolia, Indian Subcontinent

Region codes for DVD drives and media

DVD Super Multi drives and their associated media are manufactured according to the specifications of six marketing regions. When you purchase DVD-Video, make sure it matches your drive, otherwise it will not play properly.

Code	Region
1	Canada, United States
2	Japan, Europe, South Africa, Middle East
3	South East Asia, East Asia
4	Australia, New Zealand, Pacific Islands, Central America, South America, Caribbean
5	Russia, Indian Subcontinent, Africa, North Korea, Mongolia
6	China

Writable discs

This section describes the types of writable CD/DVD/BD discs. Check the specifications of your drive to see the types of discs it can write. Use TOSHIBA Disc Creator to write compact discs. Please refer to Chapter 4, [Operating Basics](#), for further information.

CDs

- CD-R discs can be written only once. The recorded data cannot be erased or changed.
- CD-RW discs including multi speed CD-RW discs, high-speed CD-RW discs and ultra-speed CD-RW discs can be recorded more than once.

DVDs

- DVD-R, DVD+R, DVD-R (Dual Layer) and DVD+R (Double Layer) discs can be written only once. The recorded data cannot be erased or changed.
- DVD-RW, DVD+RW and DVD-RAM discs can be recorded more than once.

Some types and formats of DVD-R (Dual Layer) and DVD+R (Double Layer) discs may be unreadable.

BDs

- BD-R, BD-R(DL) discs can be written only once. The recorded data cannot be erased or changed.
- BD-RE, BD-RE(DL) discs can be recorded more than once.

BD-Writer drive

The full-size BD-Writer drive module lets you record data to writable CD/DVD/BD discs as well as run either 12 cm (4.72") or 8 cm (3.15") for Tray type CD/DVD/BDs without using an adaptor.

The read speed is slower at the centre of a disc and faster at the outer edge.

BD-ROM read	6 speed (maximum)
DVD ROM read	8 speed (maximum)
CD-ROM read	24 speed (maximum)
BD-R write	6 speed (maximum)
BD-R(DL) write	4 speed (maximum)
BD-RE write	2 speed (maximum)
BD-RE(DL) write	2 speed (maximum)
DVD-R write	8 speed (maximum)
DVD-RW write	6 speed (maximum)
DVD+R write	8 speed (maximum)
DVD+RW write	8 speed (maximum)
DVD-R DL write	4 speed (maximum)
DVD+R DL write	4 speed (maximum)
DVD-RAM write	5 speed (maximum)
CD-R write	24 speed (maximum)
CD-RW write	16 speed (maximum, Ultra-speed media)

BD-Combo drive

The full-size BD-Combo drive module lets you record data to writable CD/DVDs as well as run either 12 cm (4.72") or 8 cm (3.15") for Tray type CD/DVD/BDs without using an adaptor.

The read speed is slower at the centre of a disc and faster at the outer edge.

BD-ROM read	6 speed (maximum)
DVD-ROM read	8 speed (maximum)
CD-ROM read	24 speed (maximum)
DVD-R write	8 speed (maximum)
DVD-RW write	6 speed (maximum)
DVD+R write	8 speed (maximum)
DVD+RW write	4 speed (maximum)
DVD-R DL write	4 speed (maximum)
DVD+R DL write	4 speed (maximum)
DVD-RAM write	5 speed (maximum)
CD-R write	24 speed (maximum)
CD-RW write	16 speed (maximum, Ultra-speed media)

DVD Super Multi drive

The full-size DVD Super Multi drive module allows you to record data to recordable CD's and DVD's as well as run 12cm(4.72") and 8cm(3.15") (for Tray type) or 12cm (4.72") (for Slot type) CD's and DVD's without using an adaptor.

The speed is slower at the center of a disc and faster at the outer edge.

DVD ROM read	8 speed (maximum)
CD-ROM read	24 speed (maximum)
DVD-R write	8 speed (maximum)
DVD-R DL write	6 speed (maximum)
DVD-RW write	6 speed (maximum)
DVD+R write	8 speed (maximum)
DVD+R DL write	6 speed (maximum)
DVD+RW write	8 speed (maximum)
DVD-RAM write	5 speed (maximum)
CD-R write	24 speed (maximum)
CD-RW write	24 speed (maximum, Ultra-speed media)

Use only round standard (12cm) discs with this slot-loading optical drive. Any other size or shape disc may not be able to be removed from the slot and may damage the system as well as the disc.

Remote Controller

A remote controller, which is provided with some models, enables you to perform some functions of your computer from a distant location.

There are two different types of remote controllers:

- Full size remote controller
- Slim size remote controller

- *Some models are included with either a Full size remote controller or Slim size remote controller.*
- *Models which include the Slim size remote controller do not have a TV tuner installed and so do not allow viewing of TV programs.*

The following figure shows the buttons on the Remote Controller.

You can use your Remote Controller with Media Center to play CDs, DVDs, BDs and videos, and view pictures. The Remote Controller helps you navigate through Media Center just as a cable TV remote control navigates cable TV options or controls the playback of a movie in a VCR or DVD player.

Using the Remote Controller, you can:

- Navigate and control all Media Center windows.
- Control the video display.
- Place the computer in and out of Sleep Mode.

Refer to the [Using the Remote Controller](#) section in this chapter for information on how to use the Remote Controller as well as how to install and remove its batteries.

Full Size Remote Controller

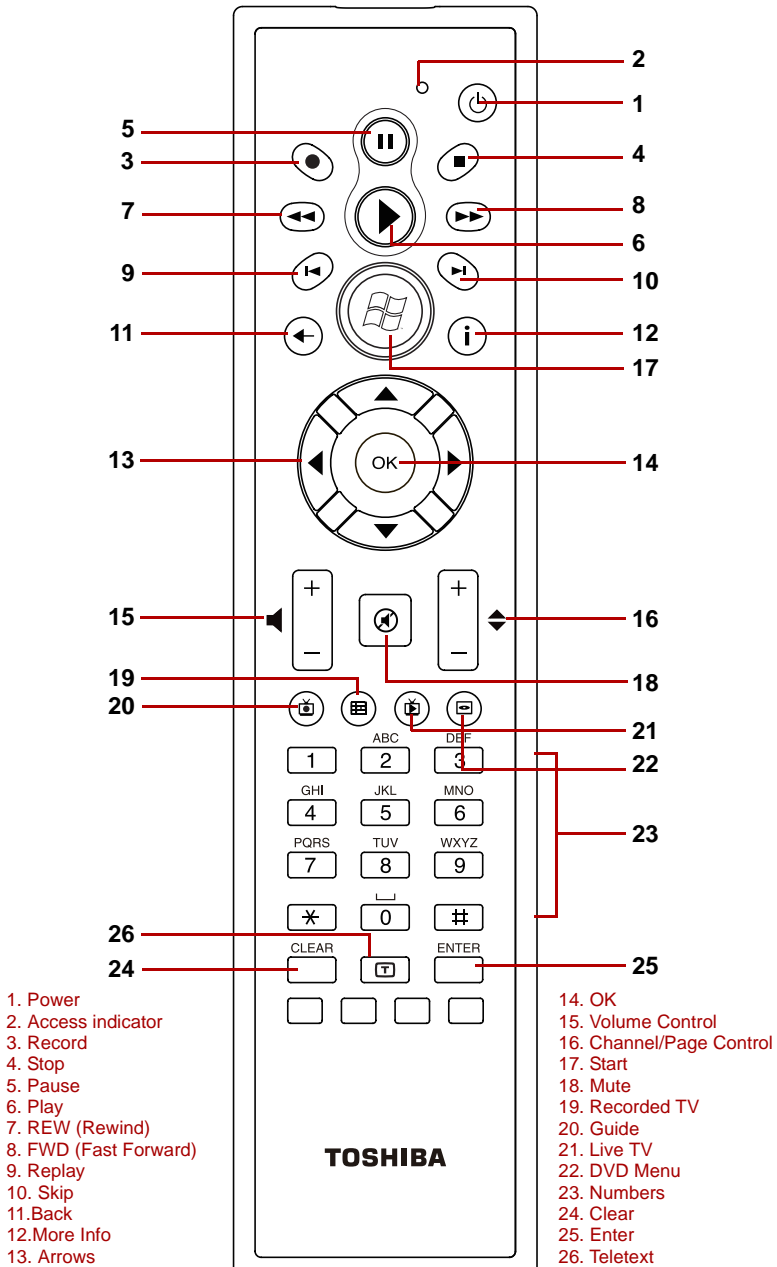

Figure 2-10 Full Size Remote Controller

	Power	Starts or terminates the operating system. This button functions like the Power button of your computer. By default, the Sleep Mode is equivalent to the Power Off state of your computer. To change the setting, click Start , select Control panel -> System and Security -> Power Options . When pressing the Sleep button, the following three options are available: Do nothing, Sleep and Hibernation.
	Access indicator	This indicator will glow while the Remote Controller is sending signals to the computer. Please note that this indicator will not light after the battery has been completely discharged.
	Record	Records the selected television program and stores it on your hard disk drive.
	Stop	Stops the media currently playing.
	Pause	Pauses an audio or video track, and live or recorded TV programs.
	Play	Plays the selected media.
	REW (Rewind)	Moves the media (video, DVD, music, and so on) backwards.
	FWD (Fast Forward)	Moves the media (video, DVD, music, and so on) forwards.
	Replay	Moves media backward (seven seconds for videos and live TV, one music track or one DVD chapter at a time).
	Skip	Moves media forward (30 seconds for videos and live TV, one music track or one DVD chapter).
	Back	Displays the previous window.
	More Info	The button provides more details on a TV program than is listed in the Guide.
	Arrows	Moves the cursor to navigate within Media Center windows.
OK	OK	Selects the desired action or window option. It acts like the ENTER Key. If watching TV in full screen mode, pressing OK switches back to the previous viewed channel. Press again to toggle back. It acts the same way as a Jump button on some TV remote controls.

	Volume +	Increases the volume while watching TV, viewing DVD's or replaying CD's.
	Volume -	Decreases the volume while watching TV, viewing DVD's or replaying CD's.
	Start	Opens Media Center to the main window.
	Channel/Page up (+) and down (-)	Changes the TV channel or moves a page up and down, depending on the available options.
	Mute	Turns your computer sound on/off.
	Recorded TV	Allows you to start recording of TV programs. The Recorded TV feature of Media Center will be activated.
	Guide	Opens the Television Program Guide to display available TV channels and programs to watch and record.
	Live TV	A shortcut to the full screen view. It also takes you to the current point in a live TV program after pausing live TV.
	DVD Menu	Opens the main menu on a DVD movie, if available.
	Numbers	Allows you to select a channel or chapter number while watching TV, or CD/DVD/BD replay. Numbers, letters or symbols can be entered. To select a channel or chapter number of two or more digits, press the buttons sequentially. For example, press the "1" button and then the "0" button to select the number 10.
	Clear	Deletes entered numbers, letters or symbols.
	Enter	The OK button on the Remote Controller has the same functions.
	Red, Green, Yellow and Blue buttons	It jumps to a registration link. These buttons are not provided with some models.
	Teletext	Starts or terminates the Teletext mode. This button is not provided with some models.

Slim Size Remote Controller

Figure 2-11 Slim Size Remote Controller

DVD Menu

Opens the main menu on a DVD movie, if available.

Start

Opens Media Center to the main window.

	Power	<p>Starts or terminates the operating system.</p> <p>This button functions like the Power button of your computer. By default, the Sleep Mode is equivalent to the Power Off state of your computer. To change the setting, click Start, select Control panel -> System and Security -> Power Options. The following four options are available: Do nothing, Sleep, Hibernate and Shut down</p>
	REW (Rewind)	Moves the media (video, DVD, music, and so on) backwards.
	Play/Pause	Plays the selected media. Pauses an audio or video track.
	FWD (Fast Forward)	Moves the media (video, DVD, music, and so on) forwards.
	Replay	Moves media backward (seven seconds for videos, one music track or one DVD chapter at a time).
	Stop	Stops the media currently playing.
	Skip	Moves media forward (30 seconds for videos, one music track or one DVD chapter).
	Back	Displays the previous window.
	Arrows	Moves the cursor to navigate within Media Center windows.
	More Info	This button has the same function as the secondary (right) mouse button. Use it to display more executable options.
OK	OK	Selects the desired action or window option. It acts like the ENTER Key.
	Volume +	Increases the volume while viewing DVD/BD or replaying CD.
	Brightness up	Increases the computer's display panel brightness in individual steps.
	Volume -	Decreases the volume while viewing DVD/BD or replaying CD.
	Mute	Turns your computer sound on/off.
	Brightness down	Decreases the computer's display panel brightness in individual steps.

Using the Remote Controller

Some computers include a remote control unit, which allows you to control some of your computer's functions from a distant location.

- *The Remote Controller is designed specifically for this computer.*
- *Some application programs may not support remote control functions.*

Operational range of the Remote Controller

Point the Remote controller at your computer and press a button. The operational angle and distance are described below.

Distance	Within 5 m from the infrared receiver window.
Angle	Within a 30 degree horizontal and 15 degree vertical range of the infrared receiver window.

Figure 2-12 Operational range of the remote control

* The appearance of the provided Remote Controller may vary from model to model.

Even if the remote controller is within the effective range as described above, it may malfunction or not work correctly in the following cases.

- When an obstacle stands between the infrared receiver window of your computer and the Remote Controller.
- When direct sunlight or strong fluorescent light strikes the infrared receiver window.
- When the infrared receiver window or the infrared emission part of the Remote Controller is dirty.
- When other computers which use an infrared remote controller are used near to your computer.
- When a low battery condition is present.

Installing/Removing batteries

Be sure to install the provided CR2016 type batteries before using the remote controller.

Store the battery for the remote control beyond the reach of children. If a child swallows a battery, this might result in choking. If it happens, contact a doctor immediately.

Observe the following precautions when using the battery of the Remote Controller.

- Do not use batteries other than those specified.
- Ensure that you insert the batteries with their polarities correctly aligned (+ or -).
- Do not recharge, heat, disassemble or short the battery, or put it into a fire or flame.
- Do not use a battery whose "recommended expiration date" has been reached, or which is completely discharged.
- Do not use different types of batteries or old and new batteries at the same time.
- Do not carry the battery together with metal necklaces, hairpins or other metal accessories.
- When storing or disposing of used batteries, make sure to put some insulation tape on their terminals (+ and -) to avoid short-circuits.

If these precautions are not followed, heating, fluid leakage or explosion may occur. This may cause burns or personal injury. If battery fluid gets on your skin or clothes, wash immediately with clean water. If battery fluid gets in your eyes, rinse your eyes with clean water immediately and see a doctor. Do not touch the battery fluid on instruments or devices with bare hands. Wipe off with a cloth or paper towel.

Type of battery that can be used for the Full Size Remote Controller

When the batteries shipped with the Remote Controller are discharged, replace them with commercially available AA manganese batteries or AA alkaline batteries. Other types of battery should not be used.

Installing the batteries

1. Open the battery cover on the back of the Remote Controller. Slide the cover in the direction of the arrow to remove the cover.

Figure 2-13 Opening the battery cover

2. Insert the batteries in place. Be sure to place the batteries with their polarities (+ and -) in the correct position.

Figure 2-14 Inserting the batteries

3. Close the battery cover. Close the cover securely until it clicks.

Figure 2-15 Closing the battery cover

Replacing the batteries

When the batteries in the Remote Controller reach the end of their life, the Remote Controller may not operate correctly or work only within a short distance from your computer. In this instance, you should purchase new batteries and replace the discharged ones.

1. Open the battery cover on the back of the Remote Controller.
2. Replace the batteries.
Be sure to place the batteries with their polarities (+ and -) in the correct position.

Figure 2-16 Removing the batteries

3. Close the battery cover until it clicks.

Type of battery that can be used for the Slim Size Remote Controller

When the batteries shipped with the Remote Controller are discharged, replace them with commercially available CR2016 Lithium batteries. Other types or battery should not be used.

Installing the battery

1. Open the battery cover on the back side of the remote controller.

Figure 2-17 Opening the battery cover

2. Be sure to place the battery with correct polarities. Press the battery down to the stopper then push it forward to fit into the battery case.

Figure 2-18 Inserting the battery

3. Close the battery cover. Close the cover securely until it clicks.

Figure 2-19 Closing the battery cover

Replacing the battery

1. Open the battery cover on the back side of the remote controller.
2. Hold down the stopper and slide the battery out of battery case.

Figure 2-20 Removing the batteries

3. Insert the battery in place. Be sure to place the batteries with correct polarities. Press the battery down to the stopper then push it forward to fit into the battery case.
4. Close the battery cover. Close the cover securely until it clicks.

Placing Slim size remote controller

Inserting a Slim size remote controller

To insert a Slim size remote controller, follow the steps as detailed below:

1. Make sure the ExpressCard slot is empty.
2. Set the front side upward and insert a Slim size remote controller.

Figure 2-21 Inserting a Slim size remote controller

3. Press a Slim size remote controller gently to ensure a firm connection is made.

Removing a Slim size remote controller

To remove a Slim size remote controller, follow the steps as detailed below:

1. Press a Slim size remote controller slightly to make it stretch out.
2. Grasp a Slim size remote controller and pull it out from the slot.

Figure 2-22 Removing a Slim size remote controller

AC adaptor

The AC adaptor can automatically adjust to any voltage ranging from 100 to 240 volts and to a frequency of either 50 or 60 hertz, enabling you to use this computer in almost all country/region. The adaptor converts AC power to DC power and reduces the voltage supplied to this computer.

To recharge the battery, simply connect the AC adaptor to a power source and to the computer. Please refer to Chapter 6, [Power and Power-Up Modes](#), for further information.

Figure 2-23 The AC adaptor (2-pin plug)

Figure 2-24 The AC adaptor (3-pin plug)

- Depending on the model in question, either a 2-pin or 3-pin adaptor/power lead will be bundled with the computer.
- Do not use a 3-pin to 2-pin conversion plug.
- The supplied power cord conforms to safety rules and regulations in the region the product is bought and should not be used outside of this region. In order to use the adaptor/computer in other regions, you should please buy a power cord that conforms to the safety rules and regulations in that particular region.

Always use the TOSHIBA AC adaptor that was included with your computer, or use AC adaptors specified by TOSHIBA to avoid any risk of fire or other damage to the computer. Use of an incompatible AC adaptor could cause fire or damage to the computer possibly resulting in serious injury. TOSHIBA assumes no liability for any damage caused by use of an incompatible adaptor.

Chapter 3

Hardware, Utilities and Options

Hardware

This section describes the hardware of your computer.

The actual specifications may vary depending on the model you purchased.

Processor

CPU	Processor type varies depending on the model. To check which type of processor is included in your model, open the TOSHIBA PC Diagnostic Tool Utility by clicking Start -> All Programs -> TOSHIBA -> Utilities -> PC Diagnostic Tool .
------------	--

Legal Footnote (CPU)*2

For more information on the CPU, please refer to the Legal Footnotes section in Appendix G.

Memory

Memory slots

1 GB, 2 GB or 4 GB memory modules can be installed in the computer's two memory slots for a maximum of 8,192MB system memory.

This computer can be equipped with memory modules of a maximum size of 8,192MB. The actual amount of useable system memory will be less than the installed memory modules.

Video RAM

The memory in a computer's graphics adaptor, used to store the image displayed on a bitmap display.

The amount of Video RAM available is dependent on the computer's system memory.

Start -> Control Panel -> Appearance and Personalization -> Display -> Adjust resolution.

The amount of Video RAM can be verified by clicking the **Advanced Settings** button in the Screen Resolution window.

If your computer is configured with more than 3 GB memory, the memory might be displayed as approximately 3 GB only (depending on the computer's hardware specifications).

This is correct because the operating system usually displays the available memory instead of the physical memory (RAM) built into the computer.

Various system components (like the video adapter's GPU and PCI devices like Wireless LAN, etc.) require their own memory space. Since a 32-bit operating system cannot address more than 4 GB of memory, these system resources overlap the physical memory. It is a technical limitation that the overlapped memory is not available to the operating system. Even though some tools might display the actual physical memory built into your computer, the memory available to the operating system will still be approximately 3 GB only.

Computers configured with a 64-bit operating system can address 4 GB or more of system memory.

Legal Footnote (Memory (Main System))*3

For more information regarding Memory (Main System), please refer to the Legal Footnotes section in Appendix G.

Power

Battery pack	The computer is powered by one rechargeable lithium-ion battery pack.
---------------------	---

Legal Footnote (Battery Life)*4

For more information regarding Battery Life, please refer to the Legal Footnotes section in Appendix G.

RTC battery	The internal RTC battery backs up the Real Time Clock (RTC) and calendar.
--------------------	---

AC adaptor	<p>The AC adaptor provides power to the system and recharges the batteries when they are low. It comes with a detachable power cord which will either have a 2-pin or 3-pin plug enclosure.</p> <p>As the AC adaptor is universal, it can receive a range of AC voltages from 100 to 240 volts, however you should note that the output current varies among different models. Using the wrong adaptor can damage your computer. Refer to the AC adaptor section in Chapter 2, The Grand Tour.</p>
-------------------	--

Disks

Hard disk drive or Solid state drive	Please note that part of the hard disk drive's overall capacity is reserved as administration space.
---	--

- *In this manual, the word "HDD" or "Hard disk drive" also refers to the SSD unless otherwise stated.*
- *SSD is a large-capacity storage media which uses Solid-State Memory in place of a magnetic disk of the hard disk.*

Under certain unusual conditions of prolonged non-use and/or exposure to high temperatures, the SSD may be vulnerable to data retention errors.

Legal Footnote (Hard Disk Drive (HDD) Capacity)*5

For more information regarding Hard Disk Drive (HDD) Capacity, please refer to the Legal Footnotes section in Appendix G or click the *5 above.

Optical disc drive

Drive	The following optical disc drive may be pre-installed in this computer. <ul style="list-style-type: none"> ■ DVD Super Multi drive Double Layer ■ BD-Writer drive ■ BD-Combo drive
--------------	---

Display

The computer's internal display panel supports high-resolution video graphics and can be set to a wide range of viewing angles for maximum comfort and readability.

Display panel	40.6cm (16.0") or 39.6cm (15.6") TFT LCD screen, 262K colors, with the following resolution: <ul style="list-style-type: none"> ■ HD, 1366 horizontal x 768 vertical pixels
----------------------	--

Display Power Saving Technology

Intel chipset model may include the Display Power Saving Technology feature that can save the computer's power consumption by optimizing picture contrast on the internal LCD. This feature can be used if the computer is:

- configured with Intel® HM55 or HM57 Express Chipset
- running under battery mode
- using the internal LCD display only

The Display Power Saving Technology feature can be enabled in the Intel® Graphics and Media Control Panel.

You can access this control panel in one of the following ways:

- Click **Start** -> **Control Panel**. Select **Large icons** or **Small icons** in **View by**, and then click **Intel(R) Graphics and Media**.
- Right-click on the desktop and click **Graphics Properties...**

In this control panel,

1. Click **Power** and then click **Power Features**.
2. Select **On battery** from the drop-down menu in **Graphics Power Plan Settings** and then select the **Display Power Saving Technology** check box.

If you want to improve the picture quality under the conditions mentioned above, adjust the setting towards Maximum Quality or disable this feature.

*Please visit your region's web site or refer to the catalog for the configuration details of the model that you have purchased.

AMD® Vari-Bright™

AMD chipset model may include the AMD® Vari-Bright™ feature that can save the computer's power consumption by optimizing picture contrast on the internal LCD. This feature can be used if the computer is:

- running under battery mode
- using the internal LCD display only

The Vari-Bright™ feature can be enabled in the Catalyst Control Center. To access this center, go to

Start -> All Programs -> Catalyst Control Center -> CCC - Advanced

In this control center,

1. Click **Graphics** at the upper left, and then select **PowerPlay™** from the drop-down menu.
2. Select the **Enable PowerPlay™** check box, and then select the **Enable Vari-Bright™** check box.

If you want to improve the picture quality under the conditions mentioned above, adjust the setting towards Maximize Quality or disable this feature.

Legal Footnote (LCD)*6

For more information regarding the LCD, please refer to the Legal Footnotes section in Appendix G.

Graphics controller

The graphics controller maximizes display performance. Refer to [Display Controller and Video mode](#) section in Appendix B for more information.

Graphics Control

Some NVIDIA graphics models may include NVIDIA® Optimus™ technology feature.

This section describes how to configure 3D settings for NVIDIA® Optimus™ technology in the NVIDIA Control Panel.

NVIDIA® Optimus™ technology intelligently optimizes notebook performance by seamlessly switching between a discrete NVIDIA GPU for great graphics performance and an Intel integrated graphics chip for sustained battery life. Switching is automatic and does not require the user to reboot the notebook.

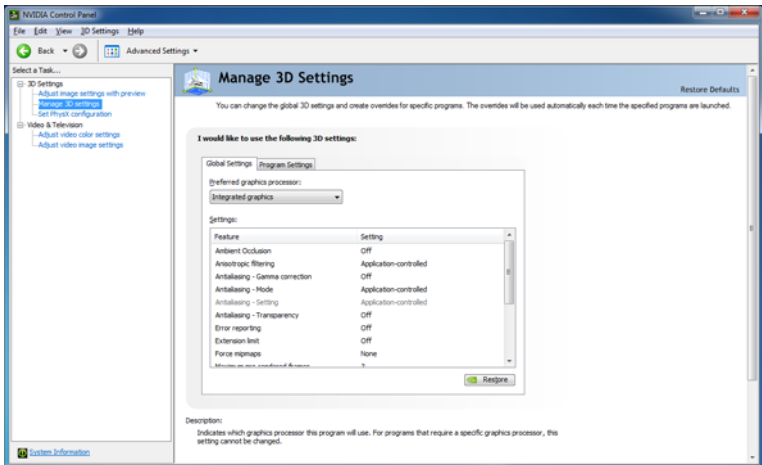

In the Manage 3D Settings menu of NVIDIA Control Panel, you can change the global 3D settings and create overrides for specific programs. The overrides will be used automatically each time the specified programs are launched.

- *Please use the default setting for NVIDIA Optimus technology.*
- *If the program does not run normally after the setting has been changed, please restore the program to the default setting.*
- *If the program does not run normally, please restore the preferred graphics processor to the default setting.*

3D Global Settings

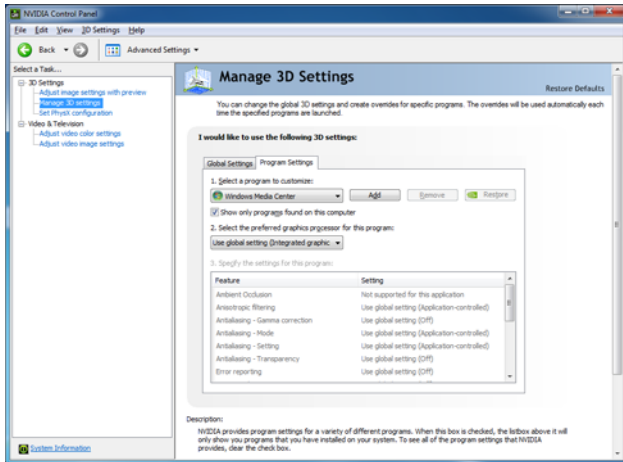

1. Click **Start** -> **Control Panel** -> **NVIDIA Control Panel**.
2. Expand the **3D Settings** category and select **Manage 3D settings**.
3. In the **Global Settings** tab, select the preferred graphics processor from the drop-down list. For programs that require a specific graphics processor, this setting can not be changed.
4. Configure the global settings for the preferred graphics processor.
 - To view a description for an option and its typical usage scenario, move the cursor over an option.
 - To view detailed instructions, select **Help** from the menu bar and then **NVIDIA Control Panel Help**.
 - To restore the default settings for an option, click the option and then click **Restore**.

3D Program Override Settings

1. Click **Start** -> **Control Panel** -> **NVIDIA Control Panel**.
2. Expand the **3D Settings** category and select **Manage 3D settings**.
3. In the **Program Settings** tab, select a program to customize from the drop-down list.
 - To add a program to the list, click **Add** and then select the desired program.
 - To remove a program from the list, click the program you wish to remove and then click **Remove**.
 - To restore default settings for a program, click the program and then click **Restore**.

4. Select the preferred graphics processor for this program. For programs that require a specific graphics processor, this setting can not be changed.
 - High-performance NVIDIA processor: Please select this setting for the program which needs great graphics performance like as 3D game.
 - Integrated graphics: Please select this setting for the program which doesn't need great graphics performance like as 2D game.
5. Configure the override settings for the program selected.
 - To view a description for an option and its typical usage scenario, move the cursor over an option.
 - To view detailed instructions, select **Help** from the menu bar and then **NVIDIA Control Panel Help**.

Legal Footnote (Graphics Processor Unit (“GPU”))*7

For more information regarding the Graphics Processor Unit (“GPU”), please refer to the Legal Footnotes section in Appendix G.

Sound

Sound system

The integrated sound system provides support for the computer's internal speakers and microphone, as allowing an external microphone and headphones to be connected via the appropriate jacks.

Multimedia

Web Camera

Web Camera is a device that allows you to record video or take photographs with your computer. You can use it for video chatting or video conferences using a communication tool such as **Windows Live Messenger**. **TOSHIBA Web Camera Application** will help you to add various video effects to your video or photograph. Please refer to the [Web Camera](#) section in Chapter 4, [Operating Basics](#).

Communications

LAN

The computer has built-in support for Ethernet LAN (10 megabits per second, 10BASE-T), Fast Ethernet LAN (100 megabits per second, 100BASE-TX) and Gigabit Ethernet LAN (1000 megabits per second, 1000BASE-T).

Bluetooth

Some computers in this series have Bluetooth wireless communication function which eliminates the need for cables between electronic devices such as computers, printers and mobile phones. When it is enabled, Bluetooth provides the wireless personal area network environment which is safe and trustworthy, that is quick and easy.

Wireless LAN

Some computers in this series are equipped with a Wireless LAN module that is compatible with other LAN systems based on Direct Sequence Spread Spectrum/Orthogonal Frequency Division Multiplexing radio technology that complies with the IEEE 802.11 Standard.

Legal Footnote (Wireless LAN)*8

For more information regarding Wireless LAN, please refer to the Legal Footnotes section in Appendix G.

Special features

The following features are either unique to TOSHIBA computers or are advanced features which make the computer more convenient to use.

Access each function using the following procedures.

*1 To access the Power Options, click **Start -> Control Panel -> System and Security -> Power Options**.

eco button	Press this button to launch the TOSHIBA eco Utility. This button changes "On" and "Off" of eco Mode. When eco Mode is "On", the icon turns green. When eco Mode is "Off", the icon turns gray.
Programmable button	The configuration of this button may vary, depending on the model you purchased and the region you are in.
Hot keys	Hot keys are specific key combinations that let you quickly change the system configuration directly from the keyboard without running a system program.
Display automatic power off *1	This feature automatically cuts off power to the computer's display panel when there is no keyboard input for a specified time, with power being restored the next time a key is pressed. This can be specified in the Power Options.
HDD automatic power off *1	This feature automatically cuts off power to the hard disk drive when it is not accessed for a specified time, with power being restored when the hard disk drive is next accessed. This can be specified in the Power Options.
System automatic Sleep/Hibernation Mode *1	This feature automatically shuts down the system into either Sleep Mode or Hibernation Mode when there is no input or hardware access for a specified time. This can be specified in the Power Options.
Power on password	Two levels of password security, supervisor and user, are available to prevent unauthorized access to your computer.
Instant security	A specific hot key function automatically locks the system providing data security.

Intelligent power supply **1	A microprocessor in the computer's intelligent power supply detects the battery's charge, automatically calculates the remaining battery capacity and protects electronic components from abnormal conditions such as a voltage overload from the AC adaptor. This can be specified in the Power Options.
Battery save mode **1	This feature lets you configure the computer in order to save battery power. This can be specified in the Power Options.
Panel power on/off **1	This feature automatically turns power to the computer off when the display panel is closed, and turns it back on when the display panel is opened. This can be specified in the Power Options.
Low battery automatic Hibernation Mode **1	When battery power is exhausted to the point that computer operation cannot be continued, the system automatically enters Hibernation Mode and shuts itself down. This can be specified in the Power Options.
Heat dispersal **1	To protect from overheating, the CPU has an internal temperature sensor. If the computer's internal temperature rises to a certain level, the cooling fan is turned on or the processing speed is lowered. This can be specified in the Power Options.
	<p>Maximum Performance</p> <p>Turns on the fan first, then lowers the CPU processing speed if necessary.</p>
	<p>Battery Optimized</p> <p>Lowers the CPU processing speed first, then turns on the fan if necessary.</p>
	<p><i>If the processor's temperature reaches an unacceptably high level with either setting, the computer will automatically shut down to prevent any damage - in this instance any unsaved data in memory will be lost.</i></p>
TOSHIBA HDD Protection	This feature uses the acceleration sensor built in the computer to detect vibration and shocks, and automatically moves the hard disk drive's read/write head to a safe position in order to reduce the risk of damage that could be caused by head-to-disk contact. Refer to the Using the Hard Disk Drive (HDD) Protection section in Chapter 4, Operating Basics , for more details.

- *The TOSHIBA HDD Protection function does not guarantee that the hard disk drive will not be damaged.*
- *TOSHIBA HDD Protection cannot be used in models that are equipped with SSD.*

Hibernation Mode

This feature lets you turn off the power to the computer without exiting from your software. The contents of main memory are automatically saved to the hard disk drive so that when you next turn the power on again, you can continue working right where you left off. Refer to the [Turning off the power](#) section in Chapter 1, [Getting Started](#), for more details.

Sleep Mode

If you have to interrupt your work, you can use this feature to allow you to turn off power to the computer without exiting from your software. Data is maintained in the computer's main memory so that when you next turn on the power, you can continue working right where you left off.

Sleep and Charge function

This feature allows you to charge USB-compatible external devices such as mobile phones or portable digital music players via the USB port when your computer is in Sleep Mode, Hibernation Mode or in the shutdown state.

This function is worked by the TOSHIBA Sleep Utility. For more information, please refer to the [Using the TOSHIBA Sleep Utility](#) section in Chapter 4, [Operating Basics](#).

Sleep and Music function

This new audio feature allows you to play audio sounds from compatible external devices such as digital music players on the computer's internal speakers via the microphone jack when your computer is in Sleep Mode, Hibernation Mode or in the shutdown state.

This function is worked by the TOSHIBA Sleep Utility. For more information, please refer to the [Using the TOSHIBA Sleep Utility](#) section in Chapter 4, [Operating Basics](#).

USB Wakeup function	<p>This function restores the computer from Sleep Mode depending on the external devices connected to the USB ports.</p> <p>For example, if a mouse or USB keyboard is connected to a USB port, moving the mouse/keyboard will wakeup the computer.</p> <p>The “USB Wakeup function” operates under Windows 7 operating system and it works for all USB ports.</p>
TOSHIBA PC Health Monitor	<p>The TOSHIBA PC Health Monitor application proactively monitors a number of system functions such as power consumption, battery health and system cooling, informing you of significant system conditions. This application recognizes the system and individual component serial numbers and will track specific activities related to their usage.</p> <p>Refer to Appendix F, TOSHIBA PC Health Monitor.</p>

TOSHIBA Value Added Package

This section describes the TOSHIBA Component features pre-installed on the computer.

TOSHIBA Power Saver	<p>TOSHIBA Power Saver provides you with the features of more various power supply managements.</p>
TOSHIBA Button Support	<p>This utility controls the following computer button functions.</p> <ul style="list-style-type: none"> ■ eco button ■ Programmable button <p>The starting application from the button can be changed.</p>

TOSHIBA Button Support cannot be used in models that are not equipped with eco button and Programmable button.

TOSHIBA Zooming Utility	<p>This utility allows you to enlarge or reduce the icon size on the Windows Desktop, or the zoom factor associated with specific supported applications.</p>
--------------------------------	---

TOSHIBA PC Diagnostic Tool	The TOSHIBA PC Diagnostic Tool will display basic system configuration information and allow the functionality of some of the computer's built-in hardware devices to be tested.
TOSHIBA Password Utility	The TOSHIBA Password utility allows you to set a password in order to restrict access to the computer.
TOSHIBA Flash Cards	The TOSHIBA Flash Cards provide a quick way to modify selected system functions and to launch applications. <ul style="list-style-type: none"> ■ Hot key function ■ TOSHIBA utility launcher function
HW Setup	This utility allows you to customize your hardware settings according to the way you work with the computer and the peripherals you use.
TOSHIBA Accessibility	The TOSHIBA Accessibility utility provides support to movement impaired users when they need to use the TOSHIBA Hot-key functions. In use, the utility allows you to make the FN key "sticky", that is you can press it once, release it, and they press one of the " Function " keys in order to access its specific function. When set, the FN key will remain active until another key is pressed.

Utilities and Applications

This section describes the pre-installed utilities that come with the computer and details how to start them. For further information on their operation, please refer to each utility's online manual, help files or README.TXT file.

Depending on the model you purchased, you may not have all the utilities or applications listed below.

TOSHIBA Face Recognition	TOSHIBA Face Recognition uses a face verification library to verify the face data of users when they log in to Windows. If the verification is successful, the user will be logged into Windows automatically. The user can thus avoid having to enter a password or the like, which makes the login process easier.
---------------------------------	--

**TOSHIBA DVD
PLAYER**

This software is provided for playback of DVD-Video.

It has an on-screen interface and functions. Click **Start -> All Programs -> TOSHIBA DVD PLAYER -> TOSHIBA DVD PLAYER**.

For details on how to use TOSHIBA DVD PLAYER, see the help file.

- *Frame dropping, audio skipping or out of synch audio and video may occur during playback of some DVD-Video Disc titles.*
 - *Make sure to connect the computer's AC adaptor when playing a DVD-Video. Power-saving features may interfere with smooth playback.*
 - *If you see the screen blinking while playing DVD with subtitle on at Media Player, please use TOSHIBA DVD PLAYER or Media Center to play DVD.*
-

**Bluetooth Stack for
Windows by Toshiba**

This software enables communication between the computer and external Bluetooth devices such as printers and mobile phones.

Bluetooth functions cannot be used in models that do not have a Bluetooth module installed.

TOSHIBA Assist

TOSHIBA Assist is a graphical user interface that provides access to specific tools, utilities and applications that make the use and configuration of the computer easier.

TOSHIBA ConfigFree

TOSHIBA ConfigFree is a suite of utilities that improve the ease and control of communication devices and network connections, help in the identification of communication problems and allow the creation of profiles if you need to switch between different locations and communication networks. To access this utility, click **Start -> All Programs -> TOSHIBA -> ConfigFree**.

TOSHIBA eco Utility	<p>This PC is equipped with “eco mode”. This mode slightly lowers performance of some devices to reduce electric power consumption. You can realize measurable power savings by using it continuously. TOSHIBA eco Utility helps you monitor your power savings by showing approximate real time power consumption. Furthermore, it shows approximate accumulated power consumption and approximate accumulated power savings when using eco mode daily, weekly, and monthly. You can track power savings by using eco mode continuously.</p>
TOSHIBA Disc Creator	<p>You can create CD's and DVD's in a number of formats including audio CD's that can be played on a standard CD player, and data CD's/DVD's which can store copies of the files and folders on your computer's hard disk drive. This software can be used on models with a DVD Super Multi drive.</p> <p>To start this utility, click Start -> All Programs -> TOSHIBA -> CD&DVD Applications -> Disc Creator.</p>
TOSHIBA DVD-RAM Utility	<p>This utility has the function of Physical Format and Write-Protect to DVD-RAM. This utility is contained the setup module of TOSHIBA Disc Creator. To start this utility, click Start -> All Programs -> TOSHIBA -> CD&DVD Applications -> DVD-RAM Utility.</p>
Corel DVD MovieFactory for TOSHIBA	<p>Corel DVD MovieFactory for TOSHIBA allows users to instantly create Blu-ray disc movie, DVD-Video or slideshow discs via a user-friendly wizard interface with specific task oriented features.</p> <p>This application may not be installed depending on the model which you purchased.</p>
TOSHIBA Bulletin Board	<p>Bulletin Board is a convenient place to pin things to visually organize in a fun and creative way.</p> <p>Simply drag and drop your favorite pictures, files or notes to pin them on the Board. You can use it to create thumbnail shortcuts, reminders, to-do list and so on according to your personal style.</p> <p>To access this utility, click Start -> All Programs -> TOSHIBA -> TOSHIBA Bulletin Board.</p>

TOSHIBA ReelTime	<p>This application is a graphical history/indexing tool that enables you to view recently accessed files in a fun and easy-to-use format. View and scroll through your history of opened or imported files via thumbnails in an intuitive user interface.</p> <p>To access this utility, click Start -> All Programs -> TOSHIBA -> TOSHIBA ReelTime.</p>
TOSHIBA Media Controller	<p>This application allows you to control your music, pictures and videos by streaming content to any compatible device in your home.</p> <p>To access this utility, click Start -> All Programs -> TOSHIBA -> TOSHIBA Media Controller -> TOSHIBA Media Controller.</p> <p>For more information, please refer to the TOSHIBA Media Controller Help.</p>
WinDVD BD for TOSHIBA	<p>This software is provided for playback of Blu-ray Disc. It has an on-screen interface and functions. Click Start -> All Programs -> Corel -> Corel WinDVD BD.</p>
TOSHIBA HDD/SSD Alert Utility	<p>This utility includes wizard functions to monitor the Disk Drive operating status and execute the system backup.</p> <p>To access the utility, click Start -> All Programs -> TOSHIBA -> Utilities -> HDD SSD Alert.</p>
TOSHIBA Service Station	<p>This application allows your computer to automatically search for TOSHIBA software updates or other alerts from TOSHIBA that are specific to your computer system and its programs. When enabled, this application periodically transmits to our servers a limited amount of system information, which will be treated in strict accordance with the rules and regulations as well as applicable data protection law.</p> <p>To access this utility, click Start -> All Programs -> TOSHIBA -> Utilities -> Service Station.</p>
TOSHIBA Sleep Utility	<p>This utility is able to either enable or disable the Sleep and Charge and the Sleep and Music functions.</p> <p>To start this utility, click Start -> All Programs -> TOSHIBA -> Utilities -> Sleep Utilities.</p>

Optional devices

Optional devices can expand the computer's capabilities and its versatility. This section describes the connection or installation of the following devices:

Cards/memory

- ExpressCard
- Bridge media slot
 - Secure Digital™ (SD) Card (SD memory card, SDHC memory card, SDXC memory card, miniSD Card, microSD Card)
 - Memory Stick (Memory Stick, Memory Stick PRO, Memory Stick Duo, Memory Stick PRO Duo, Memory Stick Micro)
 - xD picture card
 - MultiMediaCard
- Additional memory module

Peripheral devices

- Hard disk drive pack
- External monitor
- Television via HDMI
- USB FDD Kit

eSATA

Other

- Security lock

ExpressCard

The computer is equipped with a single ExpressCard slot into which any ExpressCard device that meets industry standards, either manufactured by TOSHIBA or another vendor, can be installed. The slot supports hot plug connection and utilizes the PCI Express interface that supports the reading and writing of data at a theoretical maximum rate of 2.5Gbps.

Inserting an ExpressCard

The Windows hot-install feature allows you to insert ExpressCards while the computer is turned on.

Do not insert an ExpressCard while the computer is in Sleep Mode or Hibernation Mode as you may find that some cards do not work properly.

To insert an ExpressCard, follow the steps as detailed below:

1. Press the Dummy card in order to eject the Dummy card partially out of the computer.
2. Grasp the Dummy card and draw it.

3. Insert the ExpressCard into the ExpressCard slot on the side of the computer.
4. Press the ExpressCard gently to ensure a firm connection is made.

Figure 3-1 Inserting the ExpressCard

5. After inserting the ExpressCard you should refer to its documentation and also check the configuration in Windows in order to ensure that it is correct.

Removing an ExpressCard

To remove an ExpressCard, follow the steps as detailed below.

1. Open the **Safely Remove Hardware and Eject Media** icon on the Windows Taskbar.
2. Point to **ExpressCard** and click the left Touch Pad control button.
3. Press the ExpressCard in order to eject the ExpressCard partially out of the computer.
4. Grasp the ExpressCard and remove it.

Figure 3-2 Removing the ExpressCard

5. Insert the Dummy card into the ExpressCard slot.

When you do not use an ExpressCard, please be sure to insert a Dummy card.

Bridge media slot

The computer is equipped with a Bridge media slot that can accommodate some kinds of memory media with various memory capacities so that you can easily transfer data from devices, such as digital cameras and Personal Digital Assistants.

- *Keep foreign objects out of the Bridge media slot. Never allow metal objects, such as screws, staples and paper clips, to enter the computer or Keyboard. Foreign metal objects can create a short circuit, which can cause computer damage and fire, possibly resulting in serious injury.*
- *Memory Stick Duo is not compatible with the Bridge media slot. Do not insert Memory Stick Duo into the slot or you may not be able to remove it. Data may be lost or damaged if you use any memory media other than those supported.*

- *This Bridge media slot supports the following memory media.*
 - *Secure Digital (SD) Card (SD memory card, SDHC memory card, SDXC memory card, miniSD Card, microSD Card)*
 - *Memory Stick (Memory Stick, Memory Stick PRO, Memory Stick Duo, Memory Stick PRO Duo, Memory Stick Micro)*
 - *xD picture card*
 - *MultiMediaCard (MMC™)*
- *Please note that an adaptor is required to use miniSD/microSD Card.*
- *Please note that an adaptor is required to use Memory Stick PRO Duo.*
- *Please note that not all memory media have been tested and verified to work correctly. Therefore, it is not possible to guarantee that all memory media will operate properly.*
- *The slot does not support CF or SmartMedia cards, or Magic Gate functions.*

Figure 3-3 Examples of memory media

Memory media

This section provides the important safety precautions in order to handle your memory media.

Points to note about the SD/SDHC/SDXC memory card

SD/SDHC/SDXC memory cards comply with SDMI (Secure Digital Music Initiative), which is a technology adopted to prevent unlawful copy or playback of digital music. For this reason, you cannot copy or playback protected material on another computer or other device, and you may not reproduce any copyrighted material except for your personal enjoyment.

Below is a simple explanation for distinguishing SD memory cards from SDHC and SDXC memory cards.

- SD, SDHC and SDXC memory cards appear the same externally. However, the logo on SD, SDHC and SDXC memory cards is different, so pay careful attention to the logo when purchasing.

- The SD memory card logo is () .
- The SDHC memory card logo is () .
- The SDXC memory card logo is () .

- The maximum capacity of SD memory cards is 2GB. The maximum capacity of SDHC memory cards is 32GB.

Card Type	Capacities
SD	8MB, 16MB, 32MB, 64MB, 128MB, 256MB, 512MB, 1GB, 2GB
SDHC	4GB, 8GB, 16GB, 32GB
SDXC	64GB

Memory media format

New media cards are formatted according to specific standards. If you wish to reformat a media card, be sure to do so with a device that uses media cards.

Formatting an SD/SDHC/SDXC memory card

SD/SDHC/SDXC memory cards are sold already formatted in conformity to specific standards. If you reformat an SD/SDHC/SDXC memory card, be sure to reformat it with a device such as digital camera or digital audio player that uses the SD/SDHC/SDXC memory cards, not with the format command provided within Windows.

Should you need to format all areas of the memory card, including the protected area, you will need to obtain an appropriate application that applies the copy protection system.

Media care

Observe the following precautions when handling the card.

Card care

- Do not twist or bend cards.
- Do not expose cards to liquids or store in humid areas or lay media close to containers of liquid.
- Do not touch the metal part of a card or expose it to liquids or let it get dirty.
- After using card, return it to its case.
- The card is designed so that it can be inserted only one way. Do not try to force the card into the slot.
- Do not leave a card partially inserted in the slot. Press the card until you hear it click into place.

Memory card care

- Set the write-protect switch to the lock position, if you do not want to record data.
- Memory cards have a limited lifespan, so it is important to backup important data.
- Do not write to a card if the battery power is low. Low power could affect writing accuracy.
- Do not remove a card while read/write is in progress.

For more details on using memory cards, see manuals accompanying the cards.

About the write-protect

The following memory media have a function for protect.

- SD Card (SD memory card, SDHC memory card, SDXC memory card)
- Memory Stick (Memory Stick, Memory Stick PRO, Memory Stick Duo, Memory Stick PRO Duo, Memory Stick Micro)
- MultiMediaCard (MMC)

Set the write-protect switch to the lock position, if you do not want to record data.

Inserting a memory media

The following instructions apply to all types of supported media devices. To insert a memory media, follow the steps as detailed below:

1. Turn the memory media so that the contacts (metal areas) are face down.
2. Insert the memory media into the Bridge media slot on the front of the computer.
3. Press the memory media gently to ensure a firm connection is made.

Figure 3-4 Inserting a memory media

- Make sure memory media is oriented properly before you insert it. If you insert the media in wrong direction, you may not be able to remove it.
- When inserting memory media, do not touch the metal contacts. You could expose the storage area to static electricity, which can destroy data.
- Do not turn the computer off or switch to Sleep Mode or Hibernation Mode while files are being copied - doing so may cause data to be lost.

Removing a memory media

The following instructions apply to all types of supported media devices. To remove a memory media, follow the steps as detailed below:

1. Open the **Safely Remove Hardware and Eject Media** icon on the Windows Taskbar.
2. Point to **memory media** and click the left Touch Pad control button.
3. Press the memory media to partially extend it out of the computer.
4. Grasp the media and remove it.

Figure 3-5 Removing memory media

- *Make sure the **Bridge Media slot** indicator is out before you remove the memory media or turn off the computer's power. If you remove the memory media or turn off the power while the computer is accessing the memory media, you may lose data or damage the media.*
- *Do not remove the memory media while the computer is in Sleep or Hibernation Mode. The computer could become unstable or data in the memory media could be lost.*
- *Do not remove only the miniSD/microSD Card while leaving the adaptor in the Bridge Media slot.*

Additional memory module

You can install additional memory into the computer in order to increase the amount of system memory that is available. This section describes how to install and remove optional memory modules.

- *You should place a mat beneath the computer in order to prevent the computer's lid from becoming scratched or damaged when you are installing/replacing the memory module. In this instance you should avoid mats that are made of materials that hold or generate static electricity.*
- *When installing or removing a memory module, you must ensure that you do not touch any other internal areas of the computer.*
- *Insert the two memory modules into Slot A and Slot B respectively. The computer will operate in dual channel mode. You can access the inserted memory modules efficiently in dual channel.*

- *Use only memory modules approved by TOSHIBA.*
- *Do not try to install or remove a memory module under the following conditions.*
 - a. *The computer is turned on.*
 - b. *The computer was shut down in either Sleep or Hibernation Mode.*
 - c. *Wake-up on LAN is enabled.*
 - d. *The wireless communication switch is turned on.*
- *Be careful not to let screws or other foreign matter fall into the computer. It could cause malfunction or electric shock.*
- *Additional memory module is a precision electronic component that may be fatally damaged by static electricity. Since the human body can carry static electricity, it is important that you discharge yourself before touching or installing any additional memory modules. To discharge your body's static electricity, simply touch any metal close to you with bare hands.*

Point to note about memory module error

If you install a memory module that is not compatible with the computer, the **Power** indicator will flash (on for 0.5 seconds, off for 0.5 seconds) in the following ways;

- If there is an error in only Slot A: repeatedly flashes amber twice, then white.
- If there is an error in only Slot B: repeatedly flashes amber, then white twice.
- If there are errors in both Slot A and Slot B: repeatedly flashes amber twice, then white twice.

In all instances you should shut down the computer and remove the incompatible module(s).

Use a point size 0 Phillips screwdriver to remove and fasten the screws - the use of an incorrect screwdriver can damage the screw heads.

Installing a memory module

To install a memory module, follow the steps as detailed below:

1. Shut down the computer - make sure the **Power** indicator is off (refer to the [Turning off the power](#) section in Chapter 1, [Getting Started](#), if required).
2. Remove the AC adaptor and all cables and peripherals connected to the computer.
3. Close the display panel.
4. Turn the computer upside down and remove the battery pack (refer to [Replacing the battery pack](#) section in Chapter 6, [Power and Power-Up Modes](#), if required).
5. Loosen the one screw securing the memory module cover in place - please note that this screw is attached to the cover in order to prevent it from being lost.

Use a point size 0 Phillips screwdriver.

- Slide your fingernail or a thin object under the cover and lift it off.

Figure 3-6 Removing the memory module cover

- Align the notch of the memory module with that of the memory slot and gently insert the module into the slot at about a 45 degree angle before holding it down until the latches on either side snap into place.

Figure 3-7 Seating the memory module

■ Never allow metal objects, such as screws, staples and paper clips, to enter the computer. Foreign metal objects can create a short circuit, which can cause computer damage and fire, possibly resulting in serious injury.

■ Do not touch the connectors on the memory module or on the computer. Debris on the connectors may cause memory access problems.

■ The slot A is reserved for the first memory module. Use the slot B for expanded memory. If only one module is installed, use the slot A. When inserting or removing memory modules, use the A and B marked on the computer chassis to determine which slot is A and which is B.

■ Align the grooves along the edges of the memory module with the locking tabs on the connector and insert the module into the connector firmly - if you find it difficult to install the memory module, gently prise the locking tabs outwards using the tip of your finger.

Please also ensure that you hold the memory module along its left and right hand edges - the edges with the grooves in.

8. Seat the memory module cover in place and secure it with one screw.

Take care to ensure that the memory module cover is firmly closed.

1. Memory module cover
2. Screw

Figure 3-8 Seating the memory module cover

9. Install the battery pack - refer to [Replacing the battery pack](#) section in Chapter 6, *Power and Power-Up Modes*, if required.

10. Turn your computer over.

11. Turn the computer on and make sure the added memory is recognized - to confirmed it, **Start -> Control Panel -> System and Security -> System** icon.

Removing a memory module

To remove the memory module, follow the steps as detailed below:

1. Shut down the computer - make sure the **Power** indicator is off (refer to the *Turning off the power* section in Chapter 1, *Getting Started*, if required).
2. Remove the AC adaptor and all cables and peripherals connected to the computer.
3. Close the display panel.
4. Turn the computer upside down and remove the battery pack (refer to *Replacing the battery pack* section in Chapter 6, *Power and Power-Up Modes*, if required).
5. Loosen the one screw securing the memory module cover in place - please note that this screw is attached to the cover in order to prevent it from being lost.
6. Slide your fingernail or a thin object under the cover and lift it off.
7. Push the latches away from the module in order to release it - a spring will force one end of the module up at an angle.
8. Grasp the module by its edges and remove it from the computer.

- *If you use the computer for a long time, the memory modules and the circuits locating close to the memory modules will become hot. In this case, let them cool to room temperature before you replace them. Or you will get burnt if you touch any of them.*
- *Do not touch the connectors on the memory module or on the computer. Debris on the connectors may cause memory access problems.*

Figure 3-9 Removing the memory module

9. Seat the memory module cover in place and secure it with one screw.

Take care to ensure that the memory module cover is firmly closed.

10. Install the battery pack - refer to [Replacing the battery pack](#) section in Chapter 6, [Power and Power-Up Modes](#), if required.
11. Turn your computer over.

External monitor

An external analog monitor can be connected to the external monitor port on the computer. To connect a monitor, follow the steps as detailed below:

Connecting the monitor cable

1. Turn the computer's power off.
2. Connect the monitor cable to the external monitor port and tighten the screws on the left and right hand side of the connector as required.

Figure 3-10 Connecting the monitor cable to the external monitor port

3. Turn the external monitor's power on.
4. Turn the computer's power on.

When you turn on the power, the computer will automatically recognize the monitor and determine whether it is a color or monochrome device. In the event that you find that there are issues getting an image displayed on the correct monitor, you should consider using the **FN + F5** hot key to change the display settings (if you then disconnect the external monitor before you turn the computer's power off, be sure to press **FN + F5** hot key again to switch to the internal display).

Please refer to Chapter 5, *The Keyboard*, for further details on using hot keys to change the display setting.

Do not disconnect the external monitor while in Sleep or Hibernation Mode. Turn off the computer before disconnecting the external monitor.

When displaying desktop at external analog monitor, desktop is sometimes displayed on the center of the monitor with black bars around desktop (with small size).

At that time, please read the manual of the monitor and set the display mode which is supporting at the monitor. Then it will be displayed with suitable size with correct aspect ratio.

Television via HDMI

A television can be connected to the HDMI out port on the computer.

To connect a television, follow the steps below.

1. Turn the computer off.
2. Use a video cable (not supplied) to connect the television to either the HDMI out port.
3. Turn the television on.
4. Turn the computer on.

You can use the hotkeys **Fn + F5** or use the TV-Out button to change the display device. Refer to Chapter 5, [The Keyboard](#).

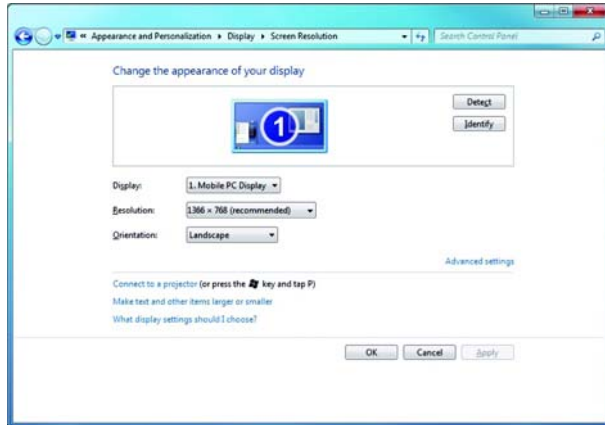

If a television is connected to the computer, set the TV type in Display Properties. Follow the steps below, based on the configuration of your computer.

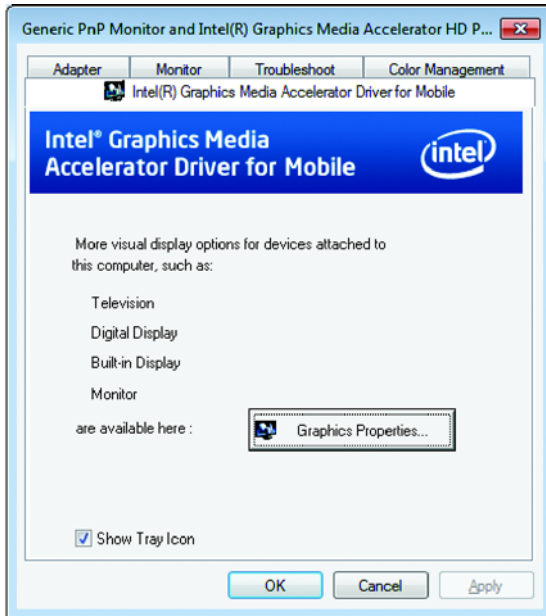

- *As the port operation of all HDMI (High-Definition Multimedia Interface) monitors have not been confirmed, some HDMI monitors may not function properly.*
- *When you connect a television or external monitor to the HDMI port and the display output device is set to HDMI. When you unplug the HDMI cable and re-plug it in please wait at least 5 seconds before you replug the HDMI cable again.*
- *When you connect a television or external monitor to the HDMI port and you connect the television, external monitor or external sound device to another port. When you change the display output or Unplug/re-plug the HDMI cable. The sound output device and the display output device maybe changed automatically by the system.*
- *When you change the display output device with the hot key combination **Fn + F5**, the audio playback device may not switch automatically. In this case, follow the steps below to manually set the audio playback device to the same device as the display output device:*
 1. Click **Start** -> **Control Panel** -> **Hardware and Sound** -> **Sound**.
 2. Under the **Playback** tab, select the audio playback device you would like to switch to.

For Intel

1. Click **Start -> Control Panel -> Appearance and Personalization -> Personalization -> Display -> Adjust screen resolution.**

2. Click the **Advanced settings** button. The **Generic PnP Monitor and Intel® Arrandale Graphics Properties** dialogue box opens.

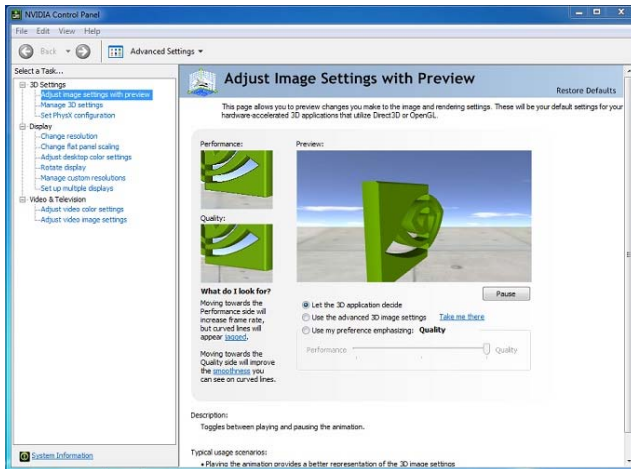

3. Click the **Graphics Properties** button.

4. In the subsequent dialogue box, click **Display** -> **Multiple Displays** and then set up your television and notebook displays.

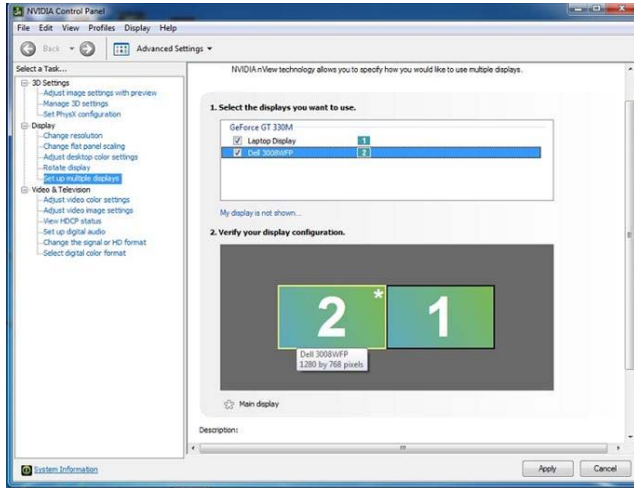

For NVIDIA

1. Right click on the computer desktop and select **NVIDIA Control Panel**.
2. Click **Display** and select **Set up multiple displays**.

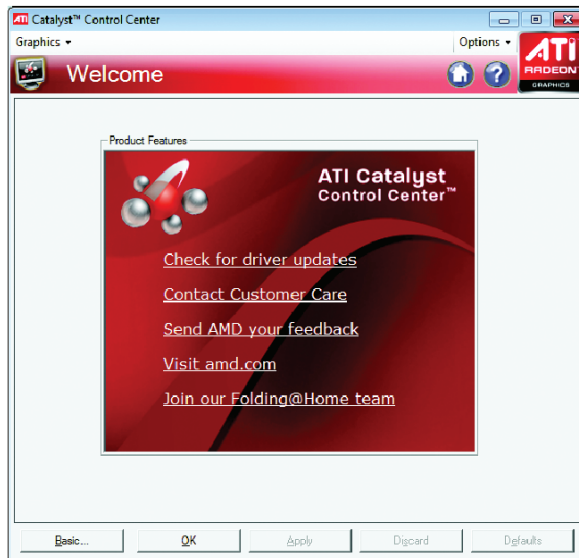

3. Click the icon on TV and select the display mode for TV.

For ATI

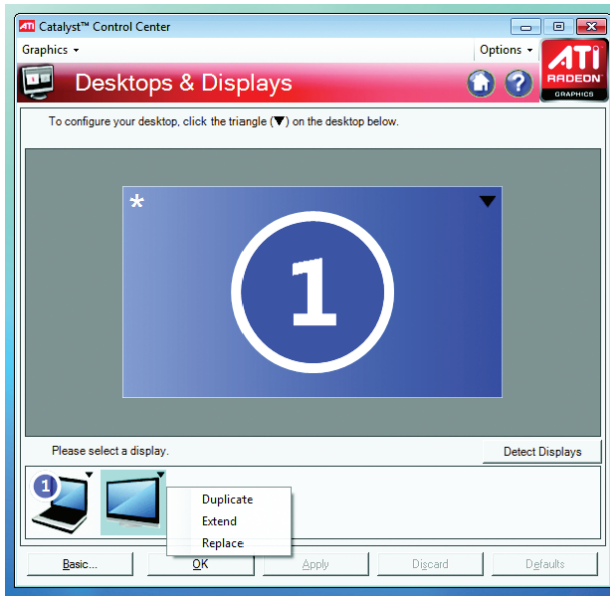

1. Click **Start -> All Programs -> Catalyst Control Center -> CCC.**

2. Click **Graphics** and select **Desktop & Displays**.

3. Click the triangle icon on TV and select the display mode for TV.

USB FDD Kit

The USB floppy diskette drive accommodates either a 1.44MB or 720KB floppy diskette and connects to one of the computer's USB ports.

Figure 3-11 The USB floppy diskette drive

Connecting the USB floppy diskette drive

To connect the drive, plug the floppy diskette drive's USB connector into a computer's USB port.

Make sure the connector is properly aligned with the socket. Do not try to force the connection, doing so can damage the connecting pins.

Figure 3-12 Connecting the USB floppy diskette drive

If you connect the USB floppy diskette drive after the computer has already been turned on, it will take about ten seconds for it to be recognized by the computer. Do not attempt to disconnect and reconnect the drive before this period has elapsed.

Disconnecting the USB floppy diskette drive

When you have finished using the USB floppy diskette drive, you can follow the procedures below in order to disconnect it:

1. Wait for the Disk-In-Use Indicator light to go out to make sure all floppy diskette activity has stopped.

If you disconnect the USB floppy diskette drive or turn off the power while the computer is accessing the drive you may lose data or damage the floppy diskette or the drive.

2. Click the **Safely Remove Hardware and Eject Media** icon on the Windows Taskbar.
3. Click the USB floppy diskette drive device that you want to remove.
4. Carefully pull the floppy diskette drive's USB connector out from within the computer's USB port.

eSATA (External Serial ATA)

An device corresponding to eSATA function can be connected to the eSATA/USB combo port on the computer.

Connecting the eSATA device

To connect an eSATA device, follow the steps as detailed below:

1. Connect an eSATA cable to the eSATA/USB combo port.

Make sure the connector is properly aligned with the socket. Do not try to force the connection, doing so can damage the connecting pins.

Figure 3-13 Connecting an eSATA cable to the eSATA/USB combo port

- A connected eSATA device may not be recognized if it is connected to the computer's eSATA/USB combo port while the computer is in Sleep Mode or Hibernation Mode. If this occurs, disconnect the eSATA device and then reconnect the device while the computer is turned on.
- If you connect an eSATA device after the computer has already been turned on, it will take about ten seconds for it to be recognized by the computer. Do not attempt to disconnect and reconnect the drive before this period has elapsed.

Disconnecting an eSATA device

When you have finished using an eSATA device, you can follow the procedures below in order to disconnect it:

1. Wait for the indicator light of an eSATA device to go out to make sure all activity has stopped.

If you disconnect an eSATA device or turn off the power while the computer is accessing the drive you may lose data or damage an eSATA device or the drive.

2. Click the **Safely Remove Hardware and Eject Media** icon on the Windows Taskbar.
3. Click an eSATA device that you want to remove.
4. Carefully pull an eSATA device's eSATA/USB combo connector out from within the computer's eSATA/USB combo port.

Security lock

A security locks enable you to anchor your computer a desk or other heavy object in order to help prevent unauthorized removal or theft. The computer has a security lock slot on its back side into which you can attach one end of the security cable, while the other end attaches to a desk or similar object. The methods used for attaching security cables differ from product to product. Please refer to the instructions for the product you are using for more information.

Connecting the security lock

In order to connect a security cable to the computer, follow the steps as detailed below:

1. Turn the computer so its back side faces you.
2. Align the security cable with the lock slot and secure it in place.

Figure 3-14 Security lock

Optional accessories

You are able to add a number of options and accessories in order to make your computer even more powerful and convenient to use. For reference, the following list details some of the items that are available from your reseller or TOSHIBA dealer:

DDR3-1066 Memory Kit	A 1 GB, 2 GB or 4 GB memory module (DDR3-1066) can easily be installed in the computer.
Universal AC Adaptor	If you frequently use your computer at more than one site, it may be convenient to purchase an additional AC adaptor to be kept at each site in order to remove the need to always carry the adaptor with you.
Battery Pack	An additional battery pack can be purchased for use as either a spare or replacement. Please refer to Chapter 6, <i>Power and Power-Up Modes</i> , for further information.
USB FDD Kit	The USB floppy diskette drive accommodates either a 1.44MB or 720KB floppy diskette through connection to one of the computer's USB ports. In use, please be aware that, while you cannot format 720KB floppy diskettes under Windows 7, you are able to read and write to diskettes that have already been formatted.
Security lock	A slot is available to attach a security cable to the computer to deter theft.

Chapter 4

Operating Basics

This chapter describes the basic operations of your computer, highlights the precautions that should be taken when using it.

Using the Touch Pad

To use the Touch Pad, simply touch and move your fingertip across it in the direction you want the on-screen pointer to go.

Figure 4-1 Touch Pad and Touch Pad control buttons

The two buttons below the Touch Pad are used like the buttons on a standard mouse - press the left button to select a menu item or to manipulate text or graphics designated by the pointer, and press the right button to display a menu or other function depending on the software you are using.

You can also tap the Touch Pad to perform functions similar to those of the left button on a standard mouse.

Click: Tap once

Double-click: Tap twice

Drag and drop: Tap to select the item(s) you want to move, leave your finger on the Touch Pad after the second tap and then move the item(s) to their new destination.

Touch Pad Gesture

There are four convenient gestures that make users operate the system easier and faster. In the Mouse Properties you can enable/disable these functions.

ChiralMotion

You can scroll vertically and horizontally. To enable these features, select the **Enable vertical scrolling** and **Enable horizontal scrolling** check boxes.

Click on the window or item you wish to scroll and slide your finger upwards or downwards along the right edge of the TouchPad to scroll vertically. Slide your finger to the left or right along the lower edge of the TouchPad to scroll horizontally.

If scrolling does not respond, ensure that the appropriate check box is selected and that the window or item on which you have clicked is scrollable. If you still have problems, check your Scrolling Region settings.

Pinch Zoom (Pinch)

The Pinch Zoom gesture delivers zooming functionality in many applications. You can use the Pinch Zoom gesture to perform the same functions that a scroll wheel performs on standard Windows applications that support CTRL-SCROLL WHEEL zoom functionality.

To enable this feature, select the **Enable Pinch Zoom** check box.

To use a Pinch Zoom gesture:

1. Place two fingers down on the TouchPad surface.
2. Slide the fingers further apart to zoom in or slide the fingers closer together to zoom out. For the best zooming experience, use the tips of your fingers.

Rotating (ChiralRotate)

The Rotating features provide convenient gestures for rotating photos and other objects.

Momentum

The Momentum feature delivers smooth, fast, trackball-like mouse movement. One quick flick of the finger on the TouchPad surface can move the cursor across the entire computer screen. Momentum reduces the repetitive motion and fatigue associated with moving the cursor long distances, while providing a smooth and natural feel similar to using a trackball. Momentum is ideal for Real Time Strategy (RTS) games, First Person Shooter (FPS) games, and Role Playing Games (RPG). The two buttons below the Touch Pad are used like the buttons on a standard mouse - press the left button to select a menu item or to manipulate text or graphics designated by the pointer, and press the right button to display a menu or other function depending on the software you are using.

Web Camera

Web Camera is a device that allows you to record video or take photographs with your computer. You can use it for video chatting or video conferences using a communication tool such as **Windows Live Messenger**. **TOSHIBA Web Camera Application** will help you to add various video effects to your video or photograph.

Enables the transmission of video and use of video chat via the internet using specialized applications.

The effective pixel count for this web camera is 0.3 million (maximum photograph size: 640x480 pixels) or 1.3 million (maximum photograph size: 1280x1024 pixels).

Some models are equipped with a Web Camera.

Please refer to the Web Camera Application Online Help for details.

1. Web Camera
2. Web Camera LED
3. Microphone

Figure 4-2 Web Camera

- Do not point the web camera directly at the sun.
- Do not touch or press strongly on the web camera lens. Doing so may reduce image quality. Use an eyeglass cleaner (cleaner cloth) or other soft cloth to clean the lens if it becomes dirty.
- Setting the [Size] to more than "800x600" will cause a larger amount of data to be written to the hard disk drive and may interfere with smooth recording.
- When recording in dimly lit environments, select "Night Mode" which allows for brighter images with less noise.

Using TOSHIBA Web Camera Application

TOSHIBA Web Camera Application is pre-configured to start when you turn on Windows® 7; if you need to restart it go to **Start -> All Programs -> TOSHIBA -> Utilities -> Web Camera Application.**

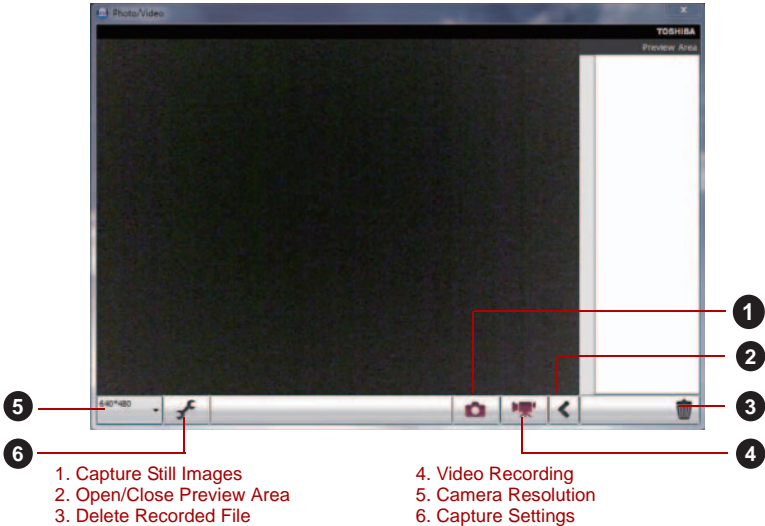

Figure 4-3 Using the Software

Capture Still Image	Click to capture a still image, and see a preview of the captured image in preview area.
Open/Close Preview Area	Click to open Preview Area. One more to close Preview Area.
Delete Recorded File	Choose a thumbnail of recorded file and click this button to delete this file from hard disk.
Video Recording	Click to start recording. One more to stop recording and see preview of the video in preview area.
Camera Resolution	Choose resolution for Preview, Capture and Record.
Capture Settings	Open Capture Settings dialog box. Chooses from the Basic tab to select photo and video saving location, select Capture Format and Video Quality.

Using the TOSHIBA Face Recognition

TOSHIBA Face Recognition uses a face verification library to verify the face data of users when they log in to Windows. The user can thus avoid having to enter a password or the like, which makes the login process easier.

- *TOSHIBA Face Recognition does not guarantee the correct identification of a user. Changes to the likeness of a registrant, such as hair style changes, wearing a cap, or wearing glasses may effect the recognition rates when such changes occur after the registrant had registered.*
- *TOSHIBA Face Recognition may incorrectly recognize faces that are similar to a registrant.*
- *For high security purposes, TOSHIBA Face Recognition is not a suitable substitute for Windows passwords. When security is a high priority, use your established Windows passwords to log in.*
- *Bright background light and/or shadows may prevent a registrant from being recognized correctly. In that case, log in using your Windows password. If recognition of a registrant fails repeatedly, refer to your computer documentation to learn ways to improve recognition performance.*
- *TOSHIBA Face Recognition records face data in a log when face recognition fails. When transferring ownership or disposing of your computer, please uninstall the application or delete all the logs created by the application. For details on how to do this, see help file.*
- *TOSHIBA Face Recognition can be used only in Windows 7.*

Disclaimer

Toshiba does not guarantee that the face recognition utility technology will be completely secure or error-free. Toshiba does not guarantee that the face recognition utility will accurately screen out unauthorized users at all times. Toshiba is not liable for any failure or damage that might arise out of the use of the face recognition software or utility.

TOSHIBA, ITS AFFILIATES AND SUPPLIERS SHALL HAVE NO RESPONSIBILITY FOR DAMAGE TO OR LOSS OF ANY BUSINESS, PROFITS, PROGRAMS, DATA, NETWORK SYSTEMS OR REMOVABLE STORAGE MEDIA ARISING OUT OF OR RESULTING FROM THE USE OF THE PRODUCT, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

How to register the Face Recognition Data

Take a picture for facial verification purposes, and register the data needed when you log in. To register the data needed when you log in, follow the steps as described below:

1. To launch this utility, click **Start -> All Programs -> TOSHIBA -> Utilities -> Face Recognition**.
 - The **Registration** screen is displayed for a logged-in user whose face has not been registered.
 - The **Management** screen is displayed for a logged-in user whose face has already been registered.
2. Click **Run as administrator** in lower left of the **Management** screen, and then click the **Register** button. The **Registration** screen is displayed.
 - If you wish to practice, click on the **Next** button in the **Registration** screen.
 - If you do not wish to practice, click on the **Skip** button in the **Registration** screen.
3. Click the **Next** button to start the guide. Please follow the guide to practice.
 - Click the **Back** button to practice the guide once more.
4. Click the **Next** button to start image-capturing process. Adjust the position of your face so that it fits within the face-shaped frame.
5. Once your face has been positioned properly, the recording will commence.
Start moving your neck very slightly to the left and right, and then move your neck down and up.
6. Registration will end after you have repeatedly moved your neck left, right, down and up.
When the register succeeds, below message will be displayed on the screen:
"Registration successful. Now we'll do the verification test. Click the Next button."
Click the **Next** button to perform the verification test.
7. Perform the verification test. Face the screen as you do when you register.
 - If verification fails, click the **Back** button and re-register. Please refer to step 6 from step 4.
8. If verification is successful, click the **Next** button and register an account.
9. Register the account.
Fill in all the fields.
10. The **Management** screen is displayed.
The registered account name will be displayed. Clicking on it will cause the captured image of your face to be displayed on the left.

How to Delete the Face Recognition Data

Delete image data, account information, and personal record data created during registration. To delete the Face Recognition Data, follow the steps as described below:

1. To launch this utility, click **Start -> All Programs -> TOSHIBA -> Utilities -> Face Recognition**.
The **Management** screen is displayed.
2. Select a user which is displayed in the **Management** screen.
3. Click the **Delete** button. "You are about to delete the user data. Would you like to continue?" will be displayed on the screen.
 - If you do not want the data to be deleted, click the **No** button and you will then be returned to the **Management** screen.
 - Clicking on the **Yes** button will remove the selected user from the **Management** screen.

How to launch the help file

For further information on this utility, please refer to help file.

1. To launch the help file, click **Start -> All Programs -> TOSHIBA -> Utilities -> Face Recognition Help**.

Windows Logon via TOSHIBA Face Recognition

This section explains how to login to Windows with TOSHIBA Face Recognition. Two authentication modes are provided.

- **1:N Mode Login screen:** If the face authentication tile is selected by default, you can log in without using the keyboard or mouse.
- **1:1 Mode Login screen:** This mode is essentially the same as AUTO mode, but the **Select Account** screen will appear before the **Display Captured Image** screen, and you will need to select the user account to be authenticated in order to start the authentication process.

1:N Mode Login screen

1. Turn on the computer.
2. The **Select Tiles** screen will be displayed.
3. Select **Start face recognition** ().
4. "Please face the camera" will be displayed.
5. Verification will be performed. If the authentication is successful, the image data taken in step 4 will be faded in and placed over one another.
 - If an error occurs during authentication, you will be returned to the **Select Tiles** screen.
6. The Windows **Welcome** screen will be displayed, and will be logged in automatically to Windows.

1:1 Mode Login screen

1. Turn on the computer.
2. The **Select Tiles** screen will be displayed.
3. Select **Start face recognition** ().
4. The **Select Account** screen will be displayed.
5. Select the account, and click the **arrow** button.
6. "Please face the camera" will be displayed.
7. Verification will be performed. If the authentication is successful, the image data taken in step 6 will be faded in and placed over one another.
 - If an error occurs during authentication, you will be returned to the **Select Tiles** screen.
8. The Windows **Welcome** screen will be displayed, and will be logged in automatically to Windows.
 - If authentication was successful, but an authentication error subsequently occurred during the login to Windows, you will be asked to provide your account information.

Using optical disc drive

■ Tray ODD

The full-size drive provides high-performance execution of CD/DVD/BD based programs. You can run either 12 cm (4.72") or 8 cm (3.15") CD/DVD/BD without an adaptor. A Serial ATA interface controller is used for CD/DVD/BD operation. When the computer is accessing a CD/DVD/BD, an indicator on the drive glows.

■ Slot ODD

The full-size drive provides high-performance execution of CD/DVD/BD based programs. You can run 12 cm (4.72") CD/DVD/BD without an adaptor. A Serial ATA interface controller is used for CD/DVD/BD operation.

- *Use the DVD playback application to view DVD-Video discs.*
- *Use only round standard (12cm) disc with this slot ODD. Any other size or shape disc may not be able to be removed from the slot and may damage the system as well as the disc.*

If you have a DVD SuperMulti drive, BD-Writer drive or BD-Combo drive, refer also to the [Writing CD/DVD/BD on DVD Super Multi drive or BD-Writer drive or BD-Combo drive](#) section for precautions on writing to CD/DVD/BD.

Loading discs

■ Tray ODD

To load CD/DVD/BD, follow the steps as detailed below:

1. When the computer's power is on, press the eject button to open the disc tray slightly.
2. Grasp the disc tray gently and pull until it is fully opened.

Figure 4-4 Pressing the eject button and pulling the disc tray open

3. Lay the CD/DVD/BD, label side up, in the disc tray.

Figure 4-5 Inserting a CD/DVD/BD

When the disc tray is fully opened, the edge of the computer will extend slightly over the CD/DVD/BD tray. Therefore, you will need to turn the CD/DVD/BD at an angle when you place it in the disc tray. After seating the CD/DVD/BD, however, make sure it lies flat.

- Do not touch the laser lens or any portion of its surrounding casing as this could cause misalignment.
- Prevent foreign objects from entering the drive. Check the surface of the disc tray, especially the area behind the front edge of the disc tray, to make sure there are no such objects before closing the drive.

4. Press gently at the center of the CD/DVD/BD until you feel it click into place. The CD/DVD/BD should lie below the top of the spindle, flush with the spindle base.
5. Push the center of the disc tray to close it. Press gently until it locks into place.

If the CD/DVD/BD is not seated properly when the disc tray is closed, the CD/DVD/BD might be damaged. Also, the disc tray might not open fully when you press the eject button.

Figure 4-6 Closing the CD/DVD/BD disc tray

■ Slot ODD

To load CD/DVD/BD, follow the steps as listed below and refer to following figures.

1. When the computer's power is on, insert CD/DVD/BD into the ODD directly.

Removing discs

■ Tray ODD

To remove the CD/DVD/BD, follow the steps as detailed below:

Do not press the eject button while the computer is accessing the media drive. Wait for the optical disc drive indicator to go out before you open the disc tray. Also, if the CD/DVD/BD is spinning when you open the disc tray, wait for it to stop before you remove it.

1. To pop the disc tray partially open, press the eject button. Gently pull the disc tray out until it is fully opened.

When the disc tray pops open slightly, wait a moment to make sure the CD/DVD/BD has stopped spinning before pulling the disc tray fully open.

2. The CD/DVD/BD extends slightly over the sides of the disc tray so you can grasp it. Gently lift out the CD/DVD/BD.

Figure 4-7 Removing a CD/DVD/BD

3. Push the center of the disc tray to close it. Press gently until it locks into place.

■ Slot ODD

To remove a CD/DVD/BD, press eject button let CD/DVD/BD be put out.

How to remove CD/DVD/BD when the disc tray will not open

Pressing the eject button will not open the disc tray when the computer power is off. If the power is off, you can open the disc tray by inserting a slender object (about 15 mm) such as a straightened paper clip into the eject hole near the eject button.

Figure 4-8 Manual release with the eject hole

Turn off the power before you use the eject hole. If the CD/DVD/BD is spinning when you open the disc tray, the CD/DVD/BD could fly off the spindle and cause injury.

Writing CD/DVD/BD on DVD Super Multi drive or BD-Writer drive or BD-Combo drive

The optical drive installed on this computer cannot write multiple sessions on DVD-R Dual Layer disc sessions. Once a disc has been written to once, it will be finalized. Once finalized, no further writing to the disc will be possible regardless of what portion of the total disc capacity was used.

You can use the DVD SuperMulti drive or BD-Writer drives or BD-Combo drives to write data to either CD-R, CD-RW, DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer), DVD+RW, DVD-RAM, DVD-R (Dual Layer) or BD-R/BD-RE discs.

TOSHIBA Disc Creator and Corel DVD MovieFactory are provided as writing software with this computer.

Corel DVD MovieFactory can be used to write files in video format. TOSHIBA Disc Creator can be used to write data.

- Please refer to the section [Writable discs](#), Chapter 2 for details about the types of writable CD, DVD and BD discs that can be supported by this computer.
- Do not turn off the power to the optical disc drive while the computer is accessing it as this may cause you to lose data.
- CD-R/RW media cannot be accessed using the Create CD/DVD option in Media Center.
- To write data to CD-R/-RW media, use the **TOSHIBA Disc Creator** feature that is installed on your computer.

When writing information to media using an optical drive, you should always ensure that you connect the AC adaptor to a live power socket. It is possible that, if data is written while powered by the battery pack, the write process may sometimes fail due to low battery power - in these instances data loss may occur.

Important message

Before you write or rewrite to any of the media supported by the DVD Super Multi drive or BD drive, please read and follow all of the setup and operating instructions in this section. If you fail to do so, you may find that the DVD Super Multi drive or BD drive may not function properly, and you may fail to write or rewrite information successfully. This may cause you to either lose data or incur other damage to the drive or media.

Before writing or rewriting

- Based on TOSHIBA's limited compatibility testing, we suggest the following manufacturers of CD-R, CD-RW, DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer), DVD+RW or DVD-RAM media, however, it must be noted that disc quality can affect write or rewrite success rates. Please also be aware that in no event does TOSHIBA guarantee the operation, quality or performance of any disc.

DVD superMulti drive

CD-R:

BD-RE(DL):

Panasonic CO., LTD.

- *DVD Super Multi drive cannot use discs that allow writing faster than 16x speed (DVD-R and DVD+R media), 8x speed (DVD-R (Dual Layer), DVD+RW and DVD+R (Double Layer) media), 6x speed (DVD-RW media), 5x speed (DVD-RAM media).*
- *Some types and formats of DVD-R (Dual Layer) and DVD+R (Double Layer) discs may be unreadable.*
- *2.6GB and 5.2GB DVD-RAM media cannot be read from or written to.*
- *DISC created in DVD-R (Dual Layer) format4 (Layer Jump Recording) cannot be read.*
- If the disc is poor in quality, or is dirty or damaged, writing or rewriting errors may be noted - ensure that you check all discs for dirt or damage before you use them.
- The actual number of rewrites to CD-RW, DVD-RW, DVD+RW or DVD-RAM media will be affected by the quality of the disc itself and the way in which it is used.
- There are two types of DVD-R media available, authoring discs and general use discs. Do not attempt to use authoring discs as only general use discs can be written to by a computer drive.
- You can use both DVD-RAM discs that can be removed from a cartridge and DVD-RAM discs designed without a cartridge.
- You may find that other computer DVD-ROM drives or other DVD players may not be able to read DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer) or DVD+RW discs.
- Data written to a CD-R, DVD-R, DVD-R (Dual Layer), DVD+R or DVD+R (Double Layer) discs cannot be deleted either in whole or in part.
- Data deleted/erased from a CD-RW, DVD-RW, DVD+RW or DVD-RAM disc cannot be recovered. You must check the content of the disc carefully before you delete it, making sure that if multiple drives that can write data to discs are connected, you do not delete data from the wrong one.
- In writing to DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer), DVD+RW or DVD-RAM media, some space is required for file management, so you may not be able to write to the full capacity of the disc.
- Since the disc is based on the DVD standard, it might be filled with dummy data if the written data is less than about 1GB. Therefore, in these circumstances, even if you write only a small amount of data, it might take additional time to fill in the dummy data.
- When multiple drives that can write data to discs are connected, be sure that you do not write to or delete data from the wrong drive.
- Be sure to connect the AC adaptor to the computer before you write or rewrite any information.
- Before you enter either Sleep Mode or Hibernation Mode, take care to ensure that any DVD-RAM writing has been completed. In this instance, writing is finished if you can eject the DVD-RAM media.

- Be sure to close all other software programs except for the writing software itself.
- Do not run software such as a screen saver which can put a heavy load on the processor.
- Operate the computer at its full power settings - do not use any power-saving features.
- Do not write information while virus checking software is running, instead wait for it to finish, then disable the virus protection applications, including any software that checks files automatically in the background.
- Do not use any hard disk utilities, including those that are intended to enhance hard disk drive access speeds, as they may cause unstable operation and damage data.
- CD-RW (Ultra Speed +) media should not be used as data may be lost or damaged.
- You should always write from the computer's hard disk drive onto the CD/DVD/BD - do not try to write from shared devices such as a server or any other network device.
- Writing with software other than TOSHIBA Disc Creator has not been confirmed, therefore operation with other software applications cannot be guaranteed.

When writing or rewriting

Please observe the following points while you write or rewrite data to CD-R, CD-RW, DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer), DVD+RW, DVD-RAM, BD-R/BD-RE media:

- Always copy data from the hard disk drive to the optical media - do not use the cut-and-paste function as the original data will be lost if there is a write error.
- Do not perform any of the following actions:
 - Change users in the Windows 7 operating system.
 - Operate the computer for any other function, including such tasks as using a mouse or Touch Pad, or closing/opening the display panel.
 - Start a communication application such as a modem.
 - Apply impact or vibration to the computer.
 - Install, remove or connect external devices, including such items as a SD/SDHC memory card, miniSD/microSD Card, ExpressCard, Memory Stick/Memory Stick PRO/Memory Stick PRO Duo, xD picture card, MultiMediaCard, USB device, external monitor, i.LINK device, or an optical digital device or BD drive.
 - Use the audio/video control button to reproduce music or voice.
 - Open the optical disc drive or BD drive.
- Do not use shut down, log off, Sleep Mode or Hibernation Mode functions while writing or rewriting.

- Make sure that the write/rewrite operation is completed before going into either Sleep Mode or Hibernation Mode (writing is completed if you can remove an optical media on the DVD Super Multi drive or BD drive).
- If the media is of poor quality, or is dirty or damaged, writing or rewriting errors may occur.
- Set the computer on a level surface and avoid places subject to vibration such as airplanes, trains or cars. In addition, do not use the computer on an unstable surface such as a stand.
- Keep mobile phones and other wireless communication devices away from the computer.

Disclaimer

TOSHIBA does not bear responsibility for the following:

- Damage to any CD-R, CD-RW, DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer), DVD+RW or DVD-RAM disc that may be caused by writing or rewriting with this product.
- Any change or loss of the recorded contents of CD-R, CD-RW, DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer), DVD+RW, DVD-RAM or BD-R/RE media that may be caused by writing or rewriting with this product, or for any business profit loss or business interruption that may be caused by the change or loss of the recorded contents.
- Damage that may be caused by using third party equipment or software.

Given the technological limitations of current optical disc writing drives, you may experience unexpected writing or rewriting errors due to disc quality or problems with hardware devices. In view of this, it is good practice to make two or more copies of important data, in case of any undesired change or loss of the recorded contents.

TOSHIBA Disc Creator

Please be aware of the following limitations when you use the TOSHIBA Disc Creator:

- DVD-Video cannot be created using TOSHIBA Disc Creator.
- DVD Audio cannot be created using TOSHIBA Disc Creator.
- You cannot use TOSHIBA Disc Creator's "Audio CD for Car or Home CD Player" function to record music to DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer) or DVD+RW media.
- Do not use the "Disc Backup" function of TOSHIBA Disc Creator in order to copy DVD-Video or DVD-ROM material that has copyright protection.
- DVD-RAM discs cannot be backed up using the "Disc Backup" function of TOSHIBA Disc Creator.
- You cannot back up CD-ROM, CD-R or CD-RW media to DVD-R, DVD-R (Dual Layer) or DVD-RW media using the "Disc Backup" function of TOSHIBA Disc Creator.

- You cannot back up CD-ROM, CD-R or CD-RW media to DVD+R, DVD+R (Double Layer) or DVD+RW media using the “Disc Backup” function of TOSHIBA Disc Creator.
- You cannot back up DVD-ROM, DVD-Video, DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer) or DVD+RW to CD-R or CD-RW media using the “Disc Backup” function of TOSHIBA Disc Creator.
- TOSHIBA Disc Creator cannot record in packet format.
- You might not be able to use the “Disc Backup” function of TOSHIBA Disc Creator to back up a DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer) or DVD+RW disc that was made with other software on a different optical media recorder.
- If you add data to a DVD-R, DVD-R (Dual Layer), DVD+R or DVD+R (Double Layer) disc that you have already recorded to, you might not be able to read the added data under some circumstances. For example, it cannot be read under 16-bit operating systems, such as Windows 98SE and Windows Me, while in Windows NT4 you will need Service Pack 6 or later, and in Windows 2000, you will need Service Pack 2. In addition to this, some DVD-ROM and DVD-ROM / CD-R/RW drives cannot read this added data regardless of the operating system.
- TOSHIBA Disc Creator does not support recording to DVD-RAM discs - to achieve this you should use Windows Explorer or another similar utility.
- When you back up a DVD disc, be sure that the source drive supports recording to DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer) or DVD+RW media - if this is not the case then the source disc might not be backed up correctly.
- When you back up a DVD-R, DVD-R (Dual Layer), DVD-RW, DVD+R, DVD+R (Double Layer) or DVD+RW disc, be sure to use the same type of disc.
- You cannot partially delete any data written to a CD-RW, DVD-RW or DVD+RW disc.

Data Verification

To verify that data has been written or rewritten correctly to a data CD/DVD/BD you should follow the steps below before you begin the write/rewrite process:

1. Select Settings for **Each Mode** -> **Data Disc** in the Setting menu.
2. Display the setting dialog box by one of the following two steps:
 - Click the **Recording settings** button () for writing on the main toolbar in the **Data Disc** mode.
 - Select **Setting for Each Mode** -> **Data Disc** in the **Setting** menu.
3. Mark the **Verify written data** check box.
4. Select **File Open** or **Full Compare** mode.
5. Click the **OK** button.

How to learn more about TOSHIBA Disc Creator

Please refer to the Help files for additional TOSHIBA Disc Creator information.

- Opening the TOSHIBA Disc Creator Manual
Start -> All Programs -> TOSHIBA -> CD&DVD Applications -> Disc Creator Help

When Using Corel DVD MovieFactory for TOSHIBA

How to make a DVD-Video

Simplified steps for making a DVD-Video from adding video source:

1. Click **Start -> All Programs -> DVD MovieFactory for TOSHIBA -> DVD MovieFactory Launcher** to launch DVD MovieFactory.
2. Insert a DVD-R, DVD+R, DVD-RW or DVD+RW disc in Burner.
3. Click **Create Video Disc -> New Project** and choose your Project format.
4. Add source from HDD by click **Add Video files** button to invoke browser dialog box.
5. Choose the source video and then go to Next page to apply Menu.
6. After choose the menu template, click the **Next** button to go to **Output Page**.
7. Choose the output type and then click the **Burn** button.

How to make a Blu-ray disc Movie

Simplified steps for making a Blu-ray disc movie:

1. Click **Start -> All Programs -> DVD MovieFactory for TOSHIBA -> DVD MovieFactory Launcher** to launch DVD MovieFactory.
2. Click **Create Video Disc -> New Project** to invoke the 2nd Launcher, choose Blu-ray, and then invoke DVD MovieFactory.
3. Add source from HDD by clicking **Add Video files** button to invoke browser dialog box.
4. Choose the source video and then go to Next page to apply Menu.
5. After choosing the menu template, click the **Next** button to go to the **Burning Page**.
6. Choose the output type then press **Burn** button.

How to learn more about Corel DVD MovieFactory

Please refer to the Help and Manual files for additional Corel DVD MovieFactory information.

- Opening the Corel DVD MovieFactory Manual **Start -> All Programs -> DVD MovieFactory for TOSHIBA -> DVD MovieFactory User Manual**

Important information for use

Note the following limitations when you write Video DVD or Blu-ray disc Movie:

1. Editing digital video

- Log in with Administrator rights to use DVD MovieFactory.
- Make sure that your computer is running on AC power when using DVD MovieFactory.
- Operate the computer at Full Power. Do not use power-saving features.
- While you are editing DVD, you can display preview. However, if another application is running. The preview might not display properly.
- DVD MovieFactory cannot edit or play copy protected content.
- Do not enter Sleep or Hibernation Mode while using DVD MovieFactory.
- Do not operate DVD MovieFactory immediately after turning on the computer. Please wait until all Disc Drive activity has stopped.
- When recording to a DV-Camcorder, to ensure you capture all of your data, let the camcorder record for a few seconds before you begin recording your actual data.
- CD recorder, DVD-Audio, mini DVD and Video CD functions are not supported in this version.
- While recording video to DVD, please close all other programs.
- Do not run software like a screen saver because it can put a heavy load on the CPU.
- Do not support mp3 decode and encode.

2. Before recording the video to DVD or Blu-ray disc

- When you record DVD disc or Blu-ray disc, please use only discs recommended by the Drive manufacturer.
- Do not set the working drive to a slow device like a USB1.1 hard disk drive or it will fail to write DVD or Blu-ray disc.
- Do not perform any of the following actions:
 - Operate the computer for any other function, including using a mouse or Touch Pad, or closing/opening the display panel.
 - Bump or cause vibration to the computer.
 - Use the Mode control button and Audio/Video control button to reproduce music or voice.
 - Open the DVD/BD drive.
 - Install, remove or connect external devices, including the following: SD/SDHC/SDXC memory card, USB device, external display, optical digital devices.
- Please verify your disc after recording important data.
- DVD+R/+RW disc cannot be written in VR format.
- Not support to output VCD and SVCD format.

3. About recorded DVDs and Blu-ray discs

- When playing your recorded DVD on your computer, please use the TOSHIBA DVD PLAYER.
- When playing your recorded Blu-ray Disc on your computer, please use the Corel WinDVD BD for TOSHIBA.
- If you use an over-used rewritable disc, the full formatting might be locked. Please use a brand new disc.
- Some DVD drives for personal computers or other DVD players may not be able to read DVD-R/+R/-RW/+RW/-RAM discs.
- Some BD-Writer/BD-Combo drives for personal computers or other Blu-ray disc players may not be able to read BD-R/RE discs.

TOSHIBA DVD PLAYER

Please be aware of the following limitations when you use the TOSHIBA DVD PLAYER:

Notes on use

- “TOSHIBA DVD PLAYER” software is supported for playback of DVD-Video and DVD-VR.
- Frame dropping, audio skipping or out of sync audio and video may occur during playback of some DVD-Video titles.
- Close all other applications when using the “TOSHIBA DVD PLAYER”. Do not open any other applications or carry out any other operations during DVD-Video playback. Playback may stop or not function properly in some situations.
- Unfinalized DVDs created on home DVD recorders may not be playable on the computer.
- Use DVD-Video discs with a region code which is either “the same as the factory default setting” or “ALL”.
- Do not playback DVD discs Video while watching or recording television programs using other applications. Doing so may cause DVD-Video playback or television program recording errors. In addition, if prescheduled recording starts during DVD-Video playback it may cause DVD-Video playback or television program recording errors. Please view DVD-Video during times when there is no recording prescheduled.
- The resume function cannot be used with some discs on the “TOSHIBA DVD PLAYER”.
- It is recommended the AC adaptor be connected when playing DVD-Video. Power saving features may interfere with smooth playback. When playing DVD-Video using battery power, set the Power Options to “Balance”.
- Screen savers will not display while playing a movie in the “TOSHIBA DVD PLAYER”. The computer will also not go into Sleep Mode, Hibernation Mode or shutdown while using “TOSHIBA DVD PLAYER”.
- Do not configure the Display automatic power off function to run while the “TOSHIBA DVD PLAYER” is running.

- Do not switch to Hibernation or Sleep Mode when running the “TOSHIBA DVD PLAYER”.
- Do not lock the computer using the Windows logo () + L keys or the Fn + F1 keys when running the “TOSHIBA DVD PLAYER”.
- The “TOSHIBA DVD PLAYER” does not have a parental control function.
- In order to protect copyrights, the Windows Print Screen function is disabled when “TOSHIBA DVD PLAYER” is running.
- (Print Screen functions are disabled even when running other applications besides “TOSHIBA DVD PLAYER” and when “TOSHIBA DVD PLAYER” is minimized.) Please close the “TOSHIBA DVD PLAYER” to use the Print Screen function.
- Carry out the installation/uninstallation of the “TOSHIBA DVD PLAYER” under a user account with administrator rights.
- Do not change Windows Users while “TOSHIBA DVD PLAYER” is running.
- For some DVD-Video discs, using the control window to change the audio track will also change the subtitle track.
- If you see the screen blinking while playing DVD with subtitle on at Media Player, please use “TOSHIBA DVD PLAYER” or “Media Center” to play DVD.

Display Devices & Audio

1. “TOSHIBA DVD PLAYER” will only run when “Colors” is set to “True Color (32 bit)”. Click **Start -> Control Panel -> Appearance and Personalization -> Display -> Adjust resolution**, click “Advanced settings”, select “Monitor” tab, set “colors” to “True color (32 bit)”.
2. If the DVD-Video image is not displayed on an external display or television, stop the “TOSHIBA DVD PLAYER”, and change the screen resolution. To change the screen resolution, click **Start -> Control Panel -> Appearance and Personalization -> Display -> Adjust resolution**. However, video cannot be output to some external displays and televisions due to output or playback conditions.
3. When viewing DVD-Video on an external display or TV, change the display device before playing. DVD-Video cannot be displayed simultaneously (in clone mode) on both the computer’s display panel and an external display.
4. Do not change the screen resolution while running the “TOSHIBA DVD PLAYER”.
5. Do not change the display device while running the “TOSHIBA DVD PLAYER”.

Starting TOSHIBA DVD PLAYER

Use the following procedure to start “TOSHIBA DVD PLAYER”.

1. Insert an DVD-Video in the DVD/BD drive while Windows® 7 is running. When a DVD-Video disc is set in the BD drive (for models with BD-Writer or BD-Combo drive), TOSHIBA DVD PLAYER starts automatically. When an DVD-Video disc is set in the DVD drive, the following application selection screen may appear. If this occurs, select Play DVD movie, (using TOSHIBA DVD PLAYER) to launch the TOSHIBA DVD PLAYER.

2. Select **Start -> All Programs -> TOSHIBA DVD PLAYER** to start “TOSHIBA DVD PLAYER”.

Operating TOSHIBA DVD PLAYER

Notes on Using “TOSHIBA DVD PLAYER”.

- Screen display and available features may vary amongst DVD-Videos and scenes.
- If the menu is opened in the Display Area using the Control window’s Top Menu or Menu buttons, touch pad and mouse menu operations may not be able to be used.

Open TOSHIBA DVD PLAYER HELP

TOSHIBA DVD PLAYER features and instructions are also explained in detail in “TOSHIBA DVD PLAYER Help”.

Use the following procedure to open “TOSHIBA DVD PLAYER Help”.

Click the “Help” button () in the Display Area.

Using WinDVD BD for TOSHIBA

Please be aware of the following limitations when you use WinDVD BD for TOSHIBA:

Notes on use

- “WinDVD BD for TOSHIBA” is for Blu-ray Disc playback only. DVD playback is not supported. Please use “TOSHIBA DVD PLAYER” for DVD playback.
- Playback of high bit rate content may cause frame dropping, audio skipping or decrease in computer performance.
- Close all other applications before playing back Blu-ray Disc. Do not open any other applications or carry out any other operations during Blu-ray Disc playback.
- Do not switch to Sleep or Hibernation Mode while WinDVD BD is running. Make sure to close WinDVD BD before going into either Sleep or Hibernation Mode.
- Because Blu-ray Disc playback operates according to programs built into the content, operation methods, operation screens, sound effects, icons and other features may vary from disc to disc. For more information on these items refer to instructions included with content or contact the content manufacturers directly.
- Make sure to connect the computer's AC adapter when playing a Blu-ray Disc.
- WinDVD BD supports AACS (Advanced Access Control System) copy protection technology. Renewal of the AACS key integrated into this product is required for uninterrupted enjoyment of Blu-ray Disc. An Internet connection is required for renewal. AACS key renewal is provided free of charge for 5 years after the purchase of this product, however renewal beyond 5 years is subject to conditions specified by the software provider, Corel Corporation.
- Do not playback Blu-ray Disc while recording television programs using “Windows Media Center”, “My TV” or other applications. Doing so may cause Blu-ray Disc playback or television program recording errors. In addition, if pre-scheduled recording starts during Blu-ray Disc Video playback it may cause Blu-ray Disc Video playback or television program recording errors. Please view Blu-ray Disc Video during times when there is no recording prescheduled.
- While playing a BD-J title, keyboard shortcut is ineffective.
- Resume play function cannot be used with some discs on WinDVD BD.
- The interactive function on Blu-ray Discs may not work depending on the contents or network situation.
- Region codes for BD drives and media BD drives and their associated media are manufactured according to the specifications of three marketing regions. Region codes can be set from WinDVD BD ([Region] tab in [Setup] dialogue). When you purchase BD Video, make sure it matches your drive, otherwise it will not play properly.

- To playback video on an external display or TV using WinDVD BD, use output devices like external displays or TV that have RGB or HDCP supported HDMI port.
- The Blu-ray disc movie can be played only on internal LCD displays or external devices connected via an RGB and HDMI output. In Clone mode (DualView), WinDVD plays on a display which set to as the Primary display and shows black screen on the other displays.
- This product does not play HD DVD discs. Blu-ray discs with high-definition content are required for HD viewing.

Starting WinDVD BD

Use the following procedure to start WinDVD BD.

- When a Blu-ray disc is set in the BD drive, WinDVD BD starts automatically.
- Select **Start -> All Programs -> Corel -> Corel WinDVD BD** to start WinDVD BD.

Operating WinDVD BD

Notes on Using WinDVD BD.

1. Screen display and available features may vary amongst BD-Videos and scenes.
2. If the menu is opened in the Display Area using the Control window's Top Menu or Menu buttons, touch pad and mouse menu operations may not be able to be used.

Open WinDVD BD HELP

WinDVD BD features and instructions are also explained in detail in "WinDVD Help". Use the following procedure to open "WinDVD Help".

- Click the "Corel Guide" button () in the Display Area and select the "Launch Help" button.

Media care

This section provides tips on protecting data stored on your CD's, DVD's, BD's and floppy diskettes. Handle your media with care. Following the simple precautions listed below will increase the lifetime of your media and protect the data stored on it.

CD/DVD/BDs

1. Store your CD/DVD/BD in the containers they originally came in to protect them and keep them clean.
2. Do not bend the CD/DVD/BD.
3. Do not write on, apply a sticker to, or otherwise mar the surface of the CD/DVD/BD that contains the data.

4. Hold the CD/DVD/BD by its outside edge or the edge on the center hole - any fingerprints on the surface of the disc can prevent the drive from properly reading data.
5. Do not expose the CD/DVD/BD to direct sunlight, extreme heat or cold.
6. Do not place heavy objects on your CD/DVD/BD.
7. If your CD/DVD/BD become dusty or dirty, wipe them with a clean dry cloth from the center hole outwards - do not wipe in a circular direction. If necessary, you can use a cloth that has been lightly dampened in water or a neutral cleaner but you must not use benzine, thinner or any similar cleaning solution.

Floppy diskettes

The USB floppy diskette drive is available only as an option.

1. Store your floppy diskettes in the container they came in to protect them and keep them clean. If a floppy diskette becomes dirty, clean it with a soft, lightly dampened cloth - do not use cleaning fluid.
2. Never open the shutter or touch the magnetic surface of your floppy diskette - doing this could permanently damage it and lose data.
3. Always handle floppy diskettes with care to prevent the loss of stored data.
4. Always apply the floppy diskette label in the correct location and never apply a new label on top of an existing one - in this instance the label could come loose and damage the floppy diskette drive.
5. Never use a pencil for writing on a floppy diskette label as the dust from the pencil lead could cause a system malfunction if it found its way onto the computer's components. In this instance, always use a felt-tipped pen and write the label first before applying it to the floppy diskette.
6. Never put a floppy diskette in a location where water or other liquid may make contact with it, or where it is excessively damp - either of these conditions could cause data loss.
7. Never use a wet or damp floppy diskette - this could damage the floppy diskette drive or other devices within the computer.
8. Data may be lost if the floppy diskette is twisted, bent, or exposed to direct sunlight, extreme heat or cold.
9. Do not place heavy objects on your floppy diskettes.
10. Do not eat, smoke, or use items such as erasers near your floppy diskettes as foreign particles inside the jacket of the floppy diskette can damage the magnetic surface.
11. Magnetic energy can destroy the data on your floppy diskettes. In view of this you should keep your floppy diskettes away from speakers, radios, televisions and other sources of magnetic fields.

Sound System

This section describes some of the audio control functions.

Adjusting System Volume

You can control the overall level of sound using Windows **Volume Mixer**.

To launch Volume Mixer, follow the steps below.

1. Locate the **Speaker** icon on the task tray.
2. Right-click the **Speaker** icon on the task tray.
3. Select **Open Volume Mixer** from the menu.

Click the **Device** button to display available playback devices. Select **Speakers** to use the internal speakers for listening. Adjust speaker volume by moving the slider up or down to raise or lower the volume. Click the **Mute** button to mute the sound.

You may see another control under **Applications** in **Volume Mixer**. It is the control for an application which is currently running. The **System Sounds** is always displayed since it controls the system sounds' volume.

Changing System Sounds

System sounds are assigned to inform you when certain events happen.

This section explains how select an existing scheme or save one you have modified.

To launch the configuration dialog window for system sounds, follow the steps below.

1. Right-click the **Speaker** icon on the task tray.
2. Select **Sounds** from the menu.

Realtek HD Audio Manager

You can confirm and change the audio configuration using the **Realtek Audio Manager**. To launch the **Realtek Audio Manager**, click **Start -> Control Panel -> Hardware and Sound -> Realtek HD Audio Manager**.

When you first launch the Realtek Audio Manager, you will see following device tabs. **Speakers** is the default output device. **Microphone** is the default input device. To change the default device, click the **Set Default Device** button under the chosen device tab.

- **Speakers** is the default output device. Select it when using the internal speakers or headphones.
- **Digital Output** should be selected when connecting the optical cable to the Headphone, S/PDIF and Line out jack for playing digital sound on digital audio equipment. Digital Output can only be used by connecting an optical audio cable.

- **Microphone** is the default input device. It should be selected when using the computer's internal microphone or an external microphone connected to the Microphone and Line in jack to record sound. If an external microphone or audio cable is connected to the Microphone and Line in jack, the Realtek HD Audio Manager Connector Settings dialog will be displayed allowing selection of either "Line In" or "Mic In" input.

Information

Click the **information button**  to view hardware information, software information, and language setting.

Power Management

The audio controller in your computer can be turned off when the audio function is not used. To adjust the configuration of audio power management, click the **battery button** .

- When audio power management is enabled, the circle button at the upper left of the Power Management is blue and convex.
- When audio power management is disabled, the button is black and concave.

Speaker Configuration

Click the **playback button**  to confirm the internal speakers or the headphone sound is coming from the right direction.

Sound Effects

This section explains how to select various sound effects.

- **Environment** - simulates reverberations of sound for familiar environments around us. You can select an existing preset in the menu.
- **Equalizer** - raises or lowers a frequency of sound to simulate a popular genre of music. You can select an existing preset in the menu.
- **Karaoke** - cancels the specific frequency of sound and results in the **Vocal Cancellation**. Clicking the **Karaoke** icon, lowers the vocal sound within music. Using the arrow buttons will adjust the musical key of the sound.

Microphone Effects

Microphone Effects are only found within **Microphone** window.

- **Noise Suppression** reduces background noise and fan noise.
- **Acoustic Echo Cancellation** reduces feedback and feedback echo.

Default Format

You can change the sample rate and bit depth of sound.

Dolby Advanced Audio

Dolby Advanced Audio provides a stunning listening experience from any pair of speakers or headphones. Adding a new level of realism to movies, music, and games, this is the quality audio customers have been missing from your computers.

Dolby Advanced Audio includes:

- **High-Frequency Enhancer:** Analyzes and restores high frequencies lost during encoding. Works on any speaker for a higher level of audio than was previously possible.
- **Audio Optimization:** Corrects common audio problems caused by laptop limitations for a better entertainment experience.
- **Natural Bass:** Extends the bass response of any speakers by up to an octave.
- **Dolby Headphone:** Enables personal surround sound using any set of headphones.

To access Dolby Advanced Audio function, follow the steps as detailed below:

1. Right-click on the speaker icon on the Taskbar, and select **Playback Devices** from the sub menu.
2. Select **Speakers**, and click **Properties**.
3. Click the Dolby tab.

Using The Microphone

You can use the built-in or an external microphone that connects to the microphone jack to record monaural sounds into your applications. It can also be used to issue voice commands to applications that support such functions. (Built-in microphone is provided with some models)

Since your computer has a microphone and speaker, “feedback” may be heard under certain conditions. Feedback occurs when sound from the speaker is picked up in the microphone and amplified back to the speaker, which amplifies it again to the microphone.

This feedback occurs repeatedly and causes a very loud, high-pitched noise. It is a common phenomenon that occurs in any sound system when the microphone input is output to the speaker (throughput) and the speaker volume is too loud or too close to the microphone. You can control throughput by adjusting the volume of your speaker or through the Mute function in the Master Volume panel. Refer to your Windows documentation for details on using the Master Volume panel.

Wireless communications

The computer's wireless communication function supports some wireless communication devices.

Only some models are equipped with both Wireless LAN and Bluetooth functions.

- *Do not use the Wireless LAN (Wi-Fi) or Bluetooth functionalities near a microwave oven or in areas subject to radio interference or magnetic fields. Interference from a microwave oven or other source can disrupt Wi-Fi or Bluetooth operation.*
- *Turn all wireless functionalities off when near a person who may have a cardiac pacemaker implant or other medical electric device. Radio waves may affect pacemaker or medical device operation, possibly resulting in serious injury. Follow the instruction of your medical device when using any wireless functionality.*
- *Always turn off wireless functionality if the computer is near automatic control equipment or appliances such as automatic doors or fire detectors. Radio waves can cause malfunction of such equipment, possibly resulting in serious injury.*
- *It may not be possible to make a network connection to a specified network name using the ad hoc network function. If this occurs, the new network(*) will have to be configured for all computers connected to the same network in order to re-enable network connections.*
* Please be sure to use new network name.

Wireless LAN

The Wireless LAN is compatible with other LAN systems based on Direct Sequence Spread Spectrum / Orthogonal Frequency Division Multiplexing radio technology that complies with the IEEE802.11 Wireless LAN standard.

- Frequency Channel Selection of 5GHz for IEEE 802.11a or/and IEEE802.11n
- Frequency Channel Selection of 2.4GHz for IEEE 802.11b/g or/and IEEE802.11n
- Roaming over multiple channels
- Card power management
- Wired Equivalent Privacy (WEP) data encryption based on an 128-bit encryption algorithm
- Wi-Fi Protected Access™ (WPA™)

The transmission speed over the wireless LAN, and the distance over which the wireless LAN can reach, may vary depending on surrounding electromagnetic environment, obstacles, access point design and configuration, client design and software/hardware configurations. The transmission rate described is the theoretical maximum speed as specified under the appropriate standard - the actual transmission speed will be lower than the theoretical maximum speed.

Setting

1. Please make sure that the **Wireless Communication Switch** is turned on.
2. Click **Start -> Control Panel -> Network and Internet -> Network and Sharing Center**.
3. Click **Set up a connection or network**.
4. Follow the wizard. You will need the name of the wireless network together with security settings. Consult the documentation accompanied with your router or ask your wireless network administrator for the settings.

Security

- TOSHIBA strongly recommend that you enable encryption functionality, otherwise your computer will be open to illegal access by an outsider using a wireless connection. If this occurs, the outsider may illegally access your system, eavesdrop, or cause the loss or destruction of stored data.
- TOSHIBA is not liable for the loss of data due to eavesdropping or illegal access through the wireless LAN and the damage thereof.

Bluetooth wireless technology

Bluetooth wireless technology eliminates the need for cables, such as desktop computers, between your PC and other electronic devices, example of printers and mobile phones.

You cannot use the computer's built-in Bluetooth functions and an external Bluetooth adaptor simultaneously. For reference, Bluetooth wireless technology has the following features:

Worldwide operation

The Bluetooth radio transmitter and receiver operate in the 2.4GHz band, which is license-free and compatible with radio systems in most countries in the world.

Radio links

You can easily establish links between two or more devices, with these links being maintained even if the devices are not within a line-of-sight of each other.

Security

Two advanced security mechanisms ensure a high level of security:

- Authentication prevents access to critical data and makes it impossible to falsify the origin of a message.
- Encryption prevents eavesdropping and maintains link privacy.

Bluetooth Stack for Windows by TOSHIBA

Please note that this software is specifically designed for the following operating systems:

- Windows 7

Information regarding the use of this software with these operating systems is listed below, with further details being contained with the electronic help files supplied with the software.

This Bluetooth Stack is based on the Bluetooth Version 1.1/1.2/2.0+EDR/2.1+EDR specification. However, TOSHIBA cannot confirm the compatibility between any computing products and/or other electronic devices that use Bluetooth, other than TOSHIBA notebook computers.

Release Notes related to the Bluetooth Stack for Windows by TOSHIBA

1. Fax application software:
Please be aware that there is some fax application software that you cannot use on this Bluetooth Stack.
2. Multi-user considerations:
On Windows 7, the use of Bluetooth is not supported in a multi-user environment. This means that, when you use Bluetooth, other users that are logged into the same computer will not be able to use this type of functionality.

Product Support:

The latest information regarding operating system support, language support or available upgrades can be found on our web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe.

Wireless communication Indicator

The wireless communication indicator shows the status of the computer's wireless communication functions.

Indicator status	Indication
Indicator off	The wireless communication switch is off - no wireless functionality is available.
Indicator glows	Wireless communication switch is on. Except for the stopped device by the software switch, all the wireless-communications functions can output a radio wave.

If you used the Taskbar to disable the wireless LAN, restart the computer or perform the following procedure to re-enable it: **Start -> Control Panel -> System and Security -> System -> Device Manager -> Network adapters** and right click the wireless device then choose **enable**.

LAN

The computer has built-in support for Ethernet LAN (10 megabits per second, 10BASE-T), Fast Ethernet LAN (100 megabits per second, 100BASE-TX) and Gigabit Ethernet LAN (1000 megabits per second, 1000BASE-T).

This section describes how to connect/disconnect to a LAN.

Do not install or remove a memory module while Wake-up on LAN is enabled.

- *The Wake-up on LAN function consumes power even when the system is off. Leave the AC adaptor connected while using this feature.*
- *The Link speed (10/100/1000 megabits per second) changes automatically depending on the network conditions (connected device, cable or noise and so on).*

LAN cable types

The computer must be configured properly before connecting to a LAN. Logging onto a LAN using the computer's default settings could cause a malfunction in LAN operation. Check with your LAN administrator regarding set-up procedures.

If you are using Gigabit Ethernet LAN (1000 megabits per second, 1000BASE-T), be sure to connect with a CAT5E cable or higher. You cannot use a CAT3 or CAT5 cable.

If you are using Fast Ethernet LAN (100 megabits per second, 100BASE-TX), be sure to connect with a CAT5 cable or higher. You cannot use a CAT3 cable.

If you are using Ethernet LAN (10 megabits per second, 10BASE-T), you can connect with a CAT3 or higher cable.

Connecting the LAN cable

To connect the LAN cable, follow the steps as detailed below:

- *Connect the AC adaptor before connecting the LAN cable. The AC adaptor must remain connected during LAN use. If you disconnect the AC Adaptor while the computer is accessing a LAN, the system may hang up.*
- *Do not connect any other cable to the LAN jack except the LAN cable. Otherwise, malfunctions or damage may occur.*
- *Do not connect any power supplying device to the LAN cable that is connected to the LAN jack. Otherwise, malfunctions or damage may occur.*

1. Turn off the power to the computer and to all external devices connected to the computer.
2. Plug one end of the cable into the LAN jack. Press gently until you hear the latch click into place.

Figure 4-9 Connecting the LAN cable

3. Plug the other end of the cable into a LAN hub connector or router. Check with your LAN administrator and hardware or software vendor before using or configuring a network connection.

*When the computer is exchanging data with the LAN, the **LAN Active** indicator glows amber. When the computer is connected to a LAN hub but is not exchanging data, the **Link** indicator glows green.*

Disconnecting the LAN cable

To disconnect the LAN cable, follow the steps as detailed below:

*Make sure the **LAN Active** indicator (amber LED) is out before you disconnect the computer from the LAN.*

1. Pinch the lever on the connector in the computer's LAN jack and pull out the connector.
2. Disconnect the cable from the LAN hub or router in the same manner. Check with your LAN administrator and hardware or software vendor before disconnecting from the hub.

Computer Handling

This section explains computer handling and maintenance.

Cleaning the computer

To help ensure long, trouble-free operation, keep the computer free of dust and dirt, and use care with all liquids around it.

- Be careful not to spill liquids into the computer. If the computer does get wet, turn the power off immediately and let the computer dry completely - in these circumstance you should get the computer inspected by an authorized service provider in order to assess the scope of any damage.
- Clean the plastics of the computer using a slightly water dampened cloth.
- You can clean the display screen by spraying a small amount of glass cleaner onto a soft, clean cloth and then wiping the screen gently with the cloth.

Never spray cleaner directly onto the computer or let liquid run into any part of it. Never use harsh or caustic chemical products to clean the computer.

Moving the computer

While the computer is designed for flexible day-to-day usage you should exercise a few simple precautions when moving it in order to help ensure trouble-free operation.

- Before moving the computer, it is recommended that you change the setting associated with the Hard Disk Drive Protection feature. Please refer to the section, [Using the Hard Disk Drive \(HDD\) Protection](#), in this chapter for further information.
- Make sure all disk/disc activity has ended before moving the computer - check that the HDD and other indicators on the front of the computer are off.
- Turn off (shut down) the computer.

- Disconnect the AC adaptor and all peripherals before moving the computer.
- Close the display panel.
- Do not pick up the computer by its display panel.
- Before carrying your computer, shut it down, disconnect the AC adaptor and allow it to cool down - a failure to follow this instruction may result in minor heat injury.
- Be careful not to subject the computer to impact or shock - a failure to follow this instruction could result in damage to computer, computer failure or loss of data.
- Never transport your computer with any cards installed - this may cause damage to either the computer and/or the card resulting in product failure.
- Always use a suitable carry case when transporting the computer.
- When carrying your computer, be sure to hold it securely so that it does not fall or hit anything.
- Do not carry your computer by holding any of its protruding elements.

Using the Hard Disk Drive (HDD) Protection

This computer has a function for reducing the risk of damage on the hard disk drive.

Using an acceleration sensor built into the computer, TOSHIBA HDD Protection detects vibration shocks and similar signs of movement of the computer, and automatically moves the Hard Disk Drive head to a safe position to reduce the risk of damage that could be caused by head-to-disk contact.

- *The TOSHIBA HDD Protection function does not guarantee that the hard disk drive will not be damaged.*
- *TOSHIBA HDD Protection cannot be used in models that are equipped with SSD.*

When vibration is detected, a message will be displayed on the screen, and the icon in the Taskbar notification area will change to the protection state. This message is displayed until the **OK** button is pressed or 30 seconds pass. When vibration subsides, the icon returns to the normal state.

Taskbar icon

State	Icon	Description
Normal		TOSHIBA HDD Protection is enabled.

Protection		TOSHIBA HDD Protection is active. The hard disk drive head is in a safe position.
OFF		TOSHIBA HDD Protection is disabled.

TOSHIBA HDD Protection Properties

You can change the TOSHIBA HDD Protection settings by using the TOSHIBA HDD Protection Properties window. To open the window, click **Start -> All Programs -> TOSHIBA -> Utilities -> HDD Protection Settings**. The window can also be started from the icon on the Taskbar or from the **Control Panel**.

HDD Protection

You can choose whether to enable or disable TOSHIBA HDD Protection.

Detection Level

This function can be set to four levels. The sensitivity levels in which vibrations, impacts and their similar signs are detected can be set to OFF, 1, 2 and 3 in ascending order. Level 3 is recommended for better protection of the computer. However, when the computer is used in a mobile environment or in other unstable conditions, setting the detection level to 3 could result in frequent execution of TOSHIBA HDD Protection, which will slow Hard Disk Drive reading and writing. Set a lower detection level when the speed of Hard Disk Drive reading and writing is a priority.

Different detection levels can be set depending on whether the computer is used as handheld or mobile usages, or whether it is used in a stable environment such as on a table in the workplace or at home. By setting different detection levels for the computer depending on whether it runs with the AC power (desktop) or with batteries (handheld or mobile usage), the detection level automatically switches according to the power connection mode.

3D Viewer

This feature displays a 3D object on the screen which moves in according to tilting or vibration of the computer.

When the TOSHIBA HDD Protection detects computer vibration the Hard Disk Drive head is parked and the 3D object disk rotation will stop. When the head is un-parked the disk will begin to rotate again.

The **3D Viewer** can be started from the icon in the task tray.

- *This 3D object virtually represents the Computer's internal Hard Disk Drive. This representation may vary from the actual number of disks, disk rotation, head movement, part size, shape and direction.*
- *This feature may use a large amount of CPU and memory on some models. The computer may become slow or sluggish when attempting to run other applications while the 3D Viewer is displayed.*
- *Intensely shaking the computer or other subjecting it to strong impacts may cause damage to the computer.*

Details

To open the Details window, click the **Setup Detail** button in the TOSHIBA HDD Protection Properties window.

Detection Level Amplification

When the AC adaptor is disconnected or the lid is closed, HDD Detection assumes that the computer will be carried and sets the detection level to the maximum for 10 seconds.

HDD Protection Message

Specify whether to display a message when TOSHIBA HDD Protection is active.

This function does not work when the computer is booting, in Sleep Mode, in Hibernation Mode, in transition to Hibernation Mode, recovering from Hibernation Mode, or powered off. Do not subject the computer to vibration or impact while the function is disabled.

Using the TOSHIBA Sleep Utility

The TOSHIBA Sleep Utility is used for changing settings of the "Sleep and Charge" and the "Sleep and Music" functions.

Sleep and Charge

Your computer can supply USB bus power (DC5V) to the USB port even when the power of the computer is turned OFF. "Power OFF" includes Sleep Mode, Hibernation Mode or shutdown state.

This function can be used for ports that support the Sleep and Charge function (hereinafter called "compatible ports").

Compatible ports are USB ports that have the (⚡) symbol icon.

You can use the "Sleep and Charge function" to charge certain USB-compatible external devices such as mobile phones or portable digital music players.

However, the "Sleep and Charge function" may not work with certain external devices even if they are compliant with the USB specification. In those cases, turn the power of the computer ON to charge the device.

- *When Sleep and Charge function is enabled, USB bus power (DC5V) will be supplied to compatible ports even when the power of the computer is turned OFF.
USB bus power (DC5V) is similarly supplied to the external devices which are connected to the compatible ports. However, some external devices cannot be charged solely by supplying USB bus power (DC5V).
As for the specifications of the external devices, please contact the device manufacturer or check the specifications of the external devices thoroughly before use.*
- *Using the Sleep and Charge function to charge external devices will take longer than charging the devices with their own chargers.*
- *If Sleep and Charge function is enabled, the computer's battery will discharge during hibernation or when the computer is turned off. It is recommended that you connect the AC adaptor to the computer when enabling the Sleep and Charge function.*
- *External devices connected to the USB bus power (DC5V) function that interfaces with the power ON/OFF of the computer may always be in an operational state.*
- *When there is a current overflow of the external devices connected to the compatible ports, USB bus power (DC5V) supply may be stopped for safety reasons.*
- *When Sleep and Charge function is enabled, the USB Wakeup function does not work for compatible ports.
In that case, if there is a USB port that does not have the Sleep and Charge function-compatible icon (⚡), attach the mouse or keyboard to it.
If all USB ports have the Sleep and Charge function-compatible icon (⚡), change to disable Sleep and Charge function
The USB Wakeup function will now work, but the Sleep and Charge function will be disabled.*

Metal paper clips or hair pins/clips will generate heat if they come into contact with USB ports. Do not allow USB ports to come into contact with metal products, for example when carrying the computer in your bag.

Sleep and Music

Your can use the speaker of your computer for the portable audio device, even when the power of the computer is turned OFF.

“Power OFF” includes Sleep Mode, Hibernation Mode or shutdown state.

The microphone/line-in jack that have the icon (🎵) support the Sleep and Music function.

- *When “Sleep and Music” is enabled, it is not possible to mute sound from the speaker even by connecting headphones to the Headphone jack. There is also no sound from the headphone.*
- *When “Sleep and Music” is enabled, it is possible to play sound from the computer’s speaker by connecting an audio cable to the Microphone jack. Using this feature discharges the computer’s battery. Therefore, it is recommended that the computer be connected to an external power source via the AC Adaptor.*
- *When using the “Sleep and Music” feature, connect the computer and Audio device with an audio cable.*
- *When using the “Sleep and Music” feature, the volume level can not be changed from the computer.*
- *The volume adjustment and mute setting might be different between Windows mode and “Sleep and Music” mode. Before connecting the audio device to the computer, turn down the volume of the audio device. Sound quality may also be different.*
- *Use the “Sleep and Music” feature with the display open.*

Starting the TOSHIBA Sleep Utility

To start the utility, click **Start -> All Programs -> TOSHIBA -> Utilities -> Sleep Utility**.

Enabling Sleep and Charge

You can enable Sleep and Charge by marking the “Enable Sleep and Charge” check box and clicking the **Apply** button. When you enable Sleep and Charge, the mode you should select is dependent on the USB device you use. If Sleep and Charge is unavailable on “Typical Mode”, change the power supply mode to another one of the options.

Power supply mode settings

To select the correct power supply mode for your USB device in Sleep and Charge. Try “Typical Mode” first and check if this mode is available. To check the availability, connect your device to the Sleep and Charge supported USB port. Then check to see if your device is being charged while the computer is in standby/sleep mode, hibernation mode or shutdown mode.

Enabling Sleep and Music

You can enable Sleep and Music by marking the “Enable Sleep and Music” check box and clicking [Apply] button.

Enable under Battery Mode

You can enable to use Sleep function(s) only with the embedded battery pack (without AC adapter connected) by marking the “Enable under Battery Mode” check box and clicking the **Apply** button. “Enable under Battery Mode” check box is not available when both of “Sleep and Charge” and “Sleep and Music” are disabled. Even if “Sleep and Charge” or “Sleep and Music” is enabled, if the remaining battery life falls below the lower limit of remaining battery life setting, the Sleep function(s) will be stopped and your device will no longer be charged or play sound. The usable time of Sleep function(s) with battery depends on the device connected, the battery charge capacity and the configuration/settings of PC.

Heat dispersal

To protect against overheating, the processor is equipped with an internal temperature sensor which activates a cooling fan or lowers the processing speed if the computer’s internal temperature rises to a certain level. You are able to select whether to control this temperature by either turning on the fan first, then if necessary lowering the processor speed, or by lowering the processor speed first, then if necessary turning on the fan. Both of these functions are controlled through the Power Options.

When the processor’s temperature falls within normal range, the fan will be turned off and the processor operation returned to its standard speed.

If the processor’s temperature reaches an unacceptably high level with either setting, the computer automatically shuts down to prevent any damage. In this instance all unsaved data in memory will be lost.

Chapter 5

The Keyboard

The computer's keyboard layouts are compatible with a 104/105-key enhanced keyboard - by pressing some keys in combination, all of the 104/105-key enhanced keyboard functions can be performed on the computer.

The number of keys available on your keyboard will depend on which country/region your computer is configured for, with keyboards being available for numerous languages.

In use there are six different types of keys, specifically typewriter keys, function keys, soft keys, Hot keys, Windows special keys and the keypad overlay.

Typewriter keys

The typewriter keys produce the upper-case and lower-case letters, numbers, punctuation marks, and special symbols that appear on the screen. However, there are some differences between using a typewriter and using a computer keyboard:

- Letters and numbers produced in computer text vary in width. Spaces, which are created by a "space character" may also vary depending on line justification and other factors.
- The lowercase l (el) and the number 1 (one), together with the uppercase O (oh) and the 0 (zero), are not interchangeable on computers as they are on a typewriter.
- The **CAPS LOCK** function key locks only the alphabetic characters into upper-case while the Shift Lock function on a typewriter places all keys in the shifted position.
- The **SHIFT** keys, the **Tab** key, and the **BACK SPACE** key perform the same function as their typewriter counterparts but also have special computer functions.

Never remove the key caps on your keyboard. Doing so could cause damage to the parts under the key caps.

Function keys: F1 ... F12

The function keys (not to be confused with the special **FN** key) are the twelve keys at the top of your keyboard - these keys function differently from other keys.

F1 through **F12** are called function keys because they execute programmed functions when pressed and, when used in combination with the **FN** key, those keys marked with icons also execute specific functions on the computer. Please refer to the section, [Soft keys: FN key combinations](#), in this chapter for further information, taking care to note that the function executed by individual keys will depend on the software you are using.

Soft keys: FN key combinations

The **FN** (function) is unique to TOSHIBA computers and is used in combination with other keys to form soft keys. Soft keys are key combinations that enable, disable or configure specific features.

Please note that some software may disable or interfere with soft-key operations, and that the soft-key settings are not restored when the computer returns from Sleep Mode.

Emulating keys on an enhanced keyboard

Figure 5-1 A 104-key enhanced keyboard layout

This computer's keyboard is designed to provide all the features of the 104-key enhanced keyboard.

Since the keyboard is smaller and has fewer keys, some of the enhanced keyboard functions must be simulated using two keys instead of one on the larger keyboard.

The **FN** key can be combined with the following keys to simulate functions similar to those of keys on the 104/105 key enhanced keyboard which are not on this computer's keyboard.

Hot keys

Hot keys (pressing **FN** + a function or **ESC** key) let you enable or disable certain features of the computer.

Mute: Pressing **FN + ESC** turns the volume on and off.

Lock: Pressing **FN + F1** enters “Lock computer mode”. To restore your desktop, you need to log on again.

Power Plan: Pressing **FN + F2** changes the power settings.

Sleep: Pressing **FN + F3** switches the system to Sleep Mode.

Hibernate: Pressing **FN + F4** switches the system to Hibernation Mode.

Output: Pressing **FN + F5** changes the active display device.

To use a simultaneous mode, you must set the resolution of the internal display panel to match the resolution of the external display device.

Brightness Down: Pressing **FN + F6** decreases the computer’s display panel brightness in individual steps.

Brightness Up: Pressing **FN + F7** increases the computer's display panel brightness in individual steps.

Wireless: Pressing **FN + F8** switches the active wireless devices if the wireless communication switch is switched on.

If no wireless communication device is installed, no dialog box will appear.

Touch Pad: Pressing **FN + F9** enables or disables the Touch Pad function.

Zoom: Pressing **FN + Space** changes the display resolution.

TOSHIBA Zooming Utility (reduce): Pressing **FN + 1** reduces the icon size on the desktop or the font sizes within one of the supported application windows.

TOSHIBA Zooming Utility (enlarge): Pressing **FN + 2** enlarges the icon size on the desktop or the font sizes within one of the supported application windows.

Volume Down: Pressing **FN + 3** decreases the volume of the media played by supported applications.

Volume Up: Pressing **FN + 4** increases the volume of the media played by supported applications.

FN Sticky key

You can use the TOSHIBA Accessibility Utility to make the **FN** key sticky, that is, you can press it once, release it, and then press an “**F Number**” key. To start the TOSHIBA Accessibility utility, click **Start -> All Programs -> TOSHIBA -> Utilities -> Accessibility**.

Windows special keys

The keyboard provides two keys that have special functions in Windows, the Windows Start Button key activates the **Start** menu while the application key has the same function as the secondary (right) mouse button.

This key activates the Windows **Start** menu.

This key has the same function as the secondary (right) mouse button.

Generating ASCII characters

Not all ASCII characters can be generated using normal keyboard operation, but you are able to generate these characters using their specific ASCII codes.

Full size keyboard:

1. Hold down **ALT** key.
2. Using the numeric keypad, type the ASCII code of the character you require.
3. Release **ALT** - the ASCII character will appear on the display screen.

Chapter 6

Power and Power-Up Modes

The computer's power resources include the AC adaptor, battery pack and any internal batteries. This chapter provides details on making the most effective use of these resources, and includes information on charging and changing batteries, tips for saving battery power, and information on the different power-up modes.

Power conditions

The computer's operating capability and battery charge status are affected by different power conditions, including whether an AC adaptor is connected, whether a battery pack is installed and what the charge level is for that battery.

Power conditions

		Power on	Power off (no operation)
AC adaptor connected	Battery fully charged	<ul style="list-style-type: none"> Operates No charge LED: Battery white DC IN white 	<ul style="list-style-type: none"> No charge LED: Battery white DC IN white
	Battery partially charged or no charge	<ul style="list-style-type: none"> Operates Charge LED: Battery amber DC IN white 	<ul style="list-style-type: none"> Quick charge LED: Battery amber DC IN white
	No battery installed	<ul style="list-style-type: none"> Operates No charge LED: Battery off DC IN white 	<ul style="list-style-type: none"> No charge LED: Battery off DC IN white

Power conditions continued

		Power on	Power off (no operation)
AC adaptor not connected	Battery charge is above low battery trigger point	<ul style="list-style-type: none"> Operates LED: Battery off DC IN off 	
	Battery charge is below low battery trigger point	<ul style="list-style-type: none"> Operates LED: Battery flashes amber DC IN off 	
	Battery charge is exhausted	Computer shuts down	
	No battery installed	<ul style="list-style-type: none"> No operation LED: Battery off DC IN off 	

Monitoring of power condition

As shown in the below table, the **Battery**, **DC IN** and **Power** indicators on the system indicator alert you to the computer's operating capability and battery charge status.

Battery indicator

Check the **Battery** indicator to determine the status of the battery pack. The following indicator lights indicate the battery status:

Flashing amber	The battery charge is low, the AC adaptor must be connected in order to recharge the battery.
Amber	Indicates the AC adaptor is connected and the battery is charging.
White	Indicates the AC adaptor is connected and the battery is fully charged.
No light	Under any other conditions, the indicator does not light.

*If the battery pack becomes too hot while it is being charged, the charge will stop and the **Battery** indicator will go out. When the battery pack's temperature falls to a normal range, charging will resume - this process will occur regardless of whether the computer's power is on or off.*

DC IN indicator

Check the **DC IN** indicator to determine the power status with the AC adaptor connected - the following indicator conditions should be noted:

White	Indicates the AC adaptor is connected and is correctly supplying power to the computer.
No light	Under any other conditions, the indicator does not light.

Power indicator

Check the **Power** indicator to determine the power status of the computer - the following indicator conditions should be noted:

White	Indicates power is being supplied to the computer and the computer is turned on.
Blinking amber	Indicates that the computer is in Sleep Mode and that there is sufficient power available (AC adaptor or battery) to maintain this condition. In Sleep Mode, this indicator will turn on for one second and off for two seconds.
No light	Under any other conditions, the indicator does not light.

Battery

This section explains battery types, use, recharging methods and handling.

Battery types

The computer has two different types of batteries.

Battery pack

When the AC adaptor is not connected, the computer's main power source is a removable lithium ion battery pack, also referred to in this manual as the main battery. You can purchase additional battery packs for extended use of the computer away from an AC power source although you should not change the battery pack while the AC adaptor is connected.

Before you remove the battery pack, save your data and shut down the computer, or place the computer into Hibernation Mode. Please be aware that, when placing the computer into Hibernation Mode, the contents of memory will be saved to the hard disk drive, although for safety sake, it is best to also save your data manually.

Real Time Clock (RTC) battery

The Real Time Clock (RTC) battery provides power for the internal real time clock and calendar function and also maintains the system configuration while the computer is turned off. If the RTC battery becomes completely discharged, the system will lose this information and the real time clock and calendar will stop working - in this instance the following message will be displayed when you turn on the power:

```
**** RTC Power Failure ****  
Check system. Then press [F2] key.
```

You can change the Real Time Clock settings by turning the computer on while pressing the **F2** key and then release the **F2** key when the **TOSHIBA Leading Innovation >>>** screen appears. Please refer to Chapter 8, [Troubleshooting](#), for further information.

The RTC battery does not charge while the computer is turned off even if the AC adaptor is attached.

Care and use of the battery pack

This section provides the important safety precautions in order to handle your battery pack properly.

Refer to the enclosed **Instruction Manual for Safety and Comfort** for detailed precautions and handling instructions.

- *Make sure the battery is securely installed in the computer before attempting to charge the battery pack. Improper installation could generate smoke or fire, or cause the battery pack to rupture.*
- *Keep the battery pack out of reach of infants and children. It can cause injury.*

- *The battery pack, Extended Battery Pack and High Capacity Battery Pack are lithium ion batteries, which can explode if not replaced, used, handled or disposed of properly. Dispose of the battery as required by local ordinances or regulations. Use only batteries recommended by TOSHIBA as replacements.*
- *The computer's RTC battery is a Ni-MH battery and should be replaced only by your dealer or by a TOSHIBA service representative. The battery can explode if not properly replaced, used, handled or disposed. Dispose of the battery as required by local ordinances or regulations.*
- *Charge the battery pack only in an ambient temperature between 5 and 35 degrees Celsius. Otherwise, the electrolyte solution might leak, battery pack performance might deteriorate and the battery life might be shortened.*
- *Never install or remove the battery pack without first turning off the power and disconnecting the AC adaptor. Never remove the battery pack while the computer is in Sleep Mode. Data could be lost.*
- *When the High Capacity Battery Pack is connected to the computer, do not hold on only to the High Capacity Battery Pack when lifting the computer up. The High Capacity Battery Pack may separate from the computer, causing it to fall and cause injuries.*

Never remove the battery pack while the Wake-up on LAN function is enabled. Data will be lost. Before you remove a battery pack, disable the Wake-up on LAN function.

Charging the batteries

When the power in the battery pack becomes low, the **Battery** indicator will flash amber to indicate that only a few minutes of battery power remain. If you continue to use the computer while the **Battery** indicator flashes, the computer will enable Hibernation Mode so that you do not lose any data, and automatically turn itself off.

You must recharge a battery pack when it becomes discharged.

Procedures

To recharge a battery pack while it is installed in the computer, connect the AC adaptor to the DC IN 15V jack and plug the other end into a working outlet - the **Battery** indicator will glow amber while the battery is being charged.

Use only the computer connected to an AC power source or optional TOSHIBA Battery charger to charge the battery pack. Never attempt to charge the battery pack with any other charger.

Time

The following table shows the approximate time required to fully charge a discharged battery.

Battery type	Charging time (hours)	
	Power off	Power on
Battery pack (4400mAh, 6 cell)	about 3.0	about 10.0
Battery pack (5600mAh, 6 cell)	about 4.0	about 10.0
Battery pack (9000mAh, 12 cell)	about 5.0	about 10.0
RTC battery	about 24	about 24 (1mA charging)

Please be aware that the charging time when the computer is on is affected by ambient temperature, the temperature of the computer and how you are using the computer - if you make heavy use of external devices for example, the battery might scarcely charge at all during operation. Please refer to the section [Maximizing battery operating time](#) for further information.

Battery charging notice

The battery may not begin charging immediately under the following conditions:

- The battery is extremely hot or cold (if the battery is extremely hot, it might not charge at all). To ensure the battery charges to its full capacity, you should charge it at room temperature of between 5° to 35°C (41° to 95°F).
- The battery is nearly completely discharged. In this instance you should leave the AC adaptor connected for a few minutes and the battery should begin charging.

The **Battery** indicator may show a rapid decrease in battery operating time when you try to charge a battery under the following conditions:

- The battery has not been used for a long time.
- The battery has completely discharged and been left in the computer for a long time.
- A cool battery is installed in a warm computer.

In such cases you should follow the steps as detailed below:

1. Fully discharge the battery by leaving it in the computer with the power on until the system automatically turns itself off.
2. Connect the AC adaptor to the DC IN 19V jack of the computer, and to a wall outlet that is supplying power.
3. Charge the battery until the **Battery** indicator glows white.

Repeat these steps two or three times until the battery recovers normal capacity.

Monitoring battery capacity

Remaining battery power can be monitored using the following methods.

- Clicking the battery icon on the Taskbar
- Via the Battery Status in the Windows Mobility Center window

- *You should wait at least 16 seconds after turning on the computer before trying to monitor the remaining operating time. This is because the computer needs this time to check the battery's remaining capacity and then calculate the remaining operating time, based on this together with the current power consumption.*
- *Please be aware that the actual remaining operating time may differ slightly from the calculated time.*
- *With repeated discharges and recharges, the battery's capacity will gradually decrease. In view of this it will be noted that an often used, older battery will not operate for as long as a new battery even when both are fully charged.*

Maximizing battery operating time

A battery's usefulness depends on how long it can supply power on a single charge, while how long the charge lasts in a battery depends on:

- Processor speed
- Screen brightness
- System Sleep Mode
- System Hibernation Mode
- Display power off period
- Hard disk drive power off period
- How often and for how long you use the hard disk drive and external disk(c) drives, for example, optical disc and floppy diskette drive.
- How much charge the battery contained to begin with.
- How you use optional devices, such as Express Cards, to which the battery supplies power.
- Whether you enable Sleep Mode, which can conserve battery power if you are frequently turning the computer off and on.
- Where you store your programs and data.
- Whether you close the display panel when you are not using the keyboard - closing the display saves power.
- The environmental temperature - operating time decreases at low temperatures.
- The condition of the battery terminals - you should always ensure the terminals stay clean by wiping them with a clean dry cloth before installing the battery pack.

Retaining data with power off

When you turn off your computer with fully charged batteries, the batteries retain data for the following approximate time periods.

Retention Time

Battery type	Sleep Mode	Shut Down Mode
Battery pack (4400mAh, 6 cell)	1 day	16 days
Battery pack (5600mAh, 6 cell)	1.25 days	20 days
Battery pack (9000mAh, 12 cell)	2 days	30 days
RTC battery	30 days	30 days

Extending battery life

To maximize the life of your battery packs:

- At least once a month, disconnect the computer from a power source and operate it on battery power until the battery pack fully discharges. Before doing so, follow the steps as detailed below.
 1. Turn off the computer's power.
 2. Disconnect the AC adaptor and turn on the computer's power - if it does not turn on then go to Step 4.
 3. Operate the computer on battery power for five minutes. If you find that the battery pack has at least five minutes of operating time, continue operating until the battery pack is fully discharged, however, if the **Battery** indicator flashes or there is some other warning to indicate a low battery condition, go to Step 4.
 4. Connect the AC adaptor to the DC IN 19V jack of the computer, and to a wall outlet that is supplying power. The **DC IN** indicator should glow white, and the **Battery** indicator should glow amber to indicate that the battery pack is being charged, however, in the event that **DC IN** indicator does not glow this indicates that power is not being supplied - check the connections for the AC adaptor and the power cord.
 5. Charge the battery pack until the **Battery** indicator glows white.
- If you have extra battery packs, rotate their use.
- If you will not be using the system for an extended period, for example for more than one month, remove the battery pack from the computer.
- Store spare battery packs in a cool dry place out of direct sunlight.

Replacing the battery pack

Please be aware that the battery pack is classified as a consumable item.

The operating life of the battery pack will gradually reduce through repeated charging and discharging, and will need to be replaced when it reaches the end of its operating life. In addition to this, you might also replace a discharged battery pack with a charged spare when you are operating your computer away from an AC power source for an extended period of time.

This section explains how to remove and install the battery pack, and begins with the removal process which is detailed through the following steps.

- *Do not remove the battery pack while the computer is in Sleep Mode. Data is stored in RAM, so if the computer loses power it could be lost.*
- *In Hibernation Mode, data will be lost if you remove the battery pack or disconnect the AC adaptor before the save is completed. Wait for the **Hard Disk Drive** indicator to go out.*
- *Do not touch the battery release latch while holding the computer or the battery pack might fall out due to the unintentional release of the battery release latch and cause injuries.*

Removing the battery pack

To remove a discharged battery, follow the steps as detailed below:

1. Save your work.
2. Turn the computer's power off - ensure that the **Power** indicator is off.
3. Remove all cables and peripherals that are connected to the computer.
4. Close the display panel and turn the computer upside down.
5. Slide the battery lock (1) into its (☐) position.
6. Slide and hold the battery release latch (2) to disengage the battery pack and then remove it from the computer (3).

Figure 6-1 Releasing the battery pack

Installing the battery pack

To install a battery pack, follow the steps as detailed below:

Do not touch the battery release latch while holding the computer or the battery pack might fall out due to the unintentional release of the battery release latch and cause injuries.

1. Insert the battery pack as far as it will go into the computer (1).
2. Ensure that the battery pack is securely in place and the battery lock (2) is in its () position.

Figure 6-2 Securing the battery pack

3. Turn your computer over.

TOSHIBA Password Utility

The TOSHIBA Supervisor Password Utility allows you to maintain an additional level of security and provides two levels of password security: User and Supervisor.

Passwords set in TOSHIBA Supervisor Password Utility are different from the Windows® login password.

User Password

To start the utility, point to or click the following items:

Launch **TOSHIBA Assist** -> **SECURE** -> **User Password**

- Registered

Click to register a password of up to 8 characters. After a password is set, you will be prompted to enter it when you start the computer.

- Not Registered

Click to delete a registered password. Before you can delete a password, you must first enter the current password correctly.

- Owner String (text box)

You can use this box to associate text with the password. After you enter text, click Apply or OK, then, each time the computer is switched on, this text will be displayed along with the prompt for the password.

Supervisor password

If you set a supervisor password, some functions will be restricted when a user logs on with the user password. To set a supervisor password:

TOSHIBA Assist -> **SECURE** -> **Supervisor password**

This utility lets you do the following:

- Register or delete the supervisor password.
- Specify restrictions for general users.

Starting the computer by password

If you have already registered a password, there is one way to start the computer:

- Enter the password manually.

The password is necessary only if the computer was shut down in boot mode, not in Hibernation or Sleep mode.

To enter a password manually, follow these steps:

1. Turn on the power as described in Chapter 1, [Getting Started](#).

The following message will appear in the LCD:

Enter Password [xxxxxxxx]

*At this point, the hotkeys **Fn + F1** to **F9** do not work. They will function after you enter the password.*

2. Enter the Password.
3. Press **Enter**.

If you enter the password incorrectly three consecutive times, the computer shuts down. You must turn on the computer again and re-enter the password.

Power-up modes

The computer has three different power-up modes as follows:

- **Shut Down Mode:** The computer will shut down without saving data - in view of this you must always save your work before you turn the computer off.
- **Hibernation Mode:** Data in memory will be saved to the hard disk drive.
- **Sleep Mode:** Data will be maintained in the computer's memory.

Please refer to the sections [Turning on the power](#) and [Turning off the power](#) in Chapter 1, [Getting Started](#) for further information.

Windows utilities

You can configure various settings associated with both Sleep Mode and Hibernation Mode within the Power Options (to access it, **Start** -> **Control Panel** -> **System and Security** -> **Power Options**).

Hot keys

You can use the **FN + F3** hot key to enter Sleep Mode or **FN + F4** to enter Hibernation Mode - please refer to Chapter 5, [The Keyboard](#), for further details.

Panel power on/off

You can set up your computer so that power is turned off automatically when you close the display panel, and turned on again when you open it. Please note that this function is only available for Sleep Mode or Hibernation Mode, not for Shut Down Mode.

If the panel power off function is enabled, and you manually shut down Windows, do not close the display panel until the shut down process has been completed.

System automatic Sleep/Hibernation

This feature automatically turns off the system in Sleep or Hibernation Mode if the computer is not used for a set duration. Refer to [Special features](#), in Chapter 3 for an explanation of how to set the duration.

Chapter 7

HW Setup

This chapter explains how to use the TOSHIBA HW Setup program to configure your computer, and provides information on settings for various functions.

Accessing HW Setup

To run the HW Setup program, click **Start -> All Programs -> TOSHIBA -> Utilities -> HWSetup**.

HW Setup window

The HW Setup window contains a number of tabs (General, Display, Boot Priority, Keyboard, CPU, LAN, SATA and USB) to allow specific functions of the computer to be configured.

In addition there are also three buttons: **OK**, **Cancel** and **Apply**.

OK	Accepts your changes and closes the HW Setup window.
Cancel	Closes the window without accepting your changes.
Apply	Accepts all your changes without closing the HW Setup window.

General

This window displays the BIOS/EC version and contains two buttons : **Default** and **About**.

Default	Return all HW Setup values to the factory settings.
About	Display the HW Setup version.

Setup

This field displays the installed **BIOS version**, **date** and **EC version**.

Display

This tab lets you customize your computer's display settings for either the internal display or an external monitor.

Power On Display

This tab allows you to select the display to be used when the computer is started. Please note that this setting is only available on standard VGA mode and is not available as part of the Windows Desktop properties.

The Power On Display is supported with some models.

Auto-Selected	Selects an external monitor if one is connected, otherwise, it selects the internal display (default).
System LCD Only	Selects the internal LCD, even if an external monitor is connected.

Boot Priority

Boot Priority Options

This tab allows you to set the priority for booting the computer. The Boot Priority Options setting window will be displayed as shown below. Click the up and down arrow buttons to adjust the priority.

You can override the settings and manually select a boot device by pressing one of the following keys while the computer is booting:

U	Selects the USB floppy diskette drive*1.
N	Selects the network.
C	Selects the optical disc drive*2.
S	Selects the USB memory drive.
E	Selects the eSATA HDD.

*1 The floppy diskette drive will be used to start the computer when there is a bootable disk contained in the external drive.

*2 The optical disc drive will be used to start the computer when there is a bootable disk contained in the drive.

To change the boot drive, follow the steps below.

1. Hold down **F12** and boot the computer. when the **TOSHIBA Leading Innovation >>>** screen appears, release the **F12** key.
2. Use the up and down cursor keys to select the boot device you want and press **ENTER**.

If a Supervisor Password has been set, manual boot device selection functions may be restricted.

The boot device selection methods described above will not change the boot priority settings that have been configured in HW Setup. In addition, if you press a key other than one of those listed, or if the selected device is not installed, the system will continue to boot according to the current and available settings in HW Setup.

USB Memory BIOS Support Type

This option allows you to set the type of the USB memory to be used as a startup device.

HDD	Sets the USB memory to be the equivalent of a hard disk drive (default). With this setting, the USB memory device can be used to start the computer as though it were a hard disk drive based on the hard disk drive settings within both the Boot Priority and HDD Priority options detailed previously.
FDD	Sets the USB memory to be the equivalent of a floppy diskette drive. With this setting, the USB memory device can be used to start the computer as though it were a floppy diskette based on the floppy diskette drive settings within the Boot Priority option detailed previously.

Keyboard

Wake-up on Keyboard

When this feature is enabled, and the computer is in Sleep Mode, you can turn on the system by pressing any key. However, please be aware that this option will only work with the internal keyboard and only when the computer is in Sleep Mode.

Enabled	Enables the Wake-up on Keyboard function.
Disabled	Disables the Wake-up on Keyboard function (Default).

CPU

This function allows you to set the processor's operating mode.

Dynamic CPU Frequency Mode

This option allows you to configure the power saving modes associated with the processor - the following settings are available:

Dynamically Switchable	The processor's power consumption and automatic clock speed switching functions are enabled - in use the processor's operation is automatically switched when necessary (default).
Always High	The processor's power consumption and automatic clock speed switching functions are disabled - in use the processor will always run at its highest level of power consumption and its highest speed.
Always Low	The processor's power consumption and automatic clock speed switching functions are disabled - in use the processor will always run at a lower level of power consumption and a low speed.

LAN

Wake-up on LAN

This feature lets the computer's power be turned on from shutdown when it receives a wake-up packet (Magic packet) from the LAN.

Do not install or remove a memory module while Wake-up on LAN is enabled.

- *The Wake-up on LAN function consumes power even when the system is off. Leave the AC adaptor connected while using this feature.*
- *Regarding Wake-up on LAN from sleep or hibernation, you must check the "Allow the device to wake the computer" check box within the LAN Device properties. (This feature does not effect the Wake-up on LAN from sleep or hibernation.)*

Power will be automatically turned on when a signal is received from an administrator's computer which is connected via a network.

The following settings can be changed when the Built-in LAN is **Enabled**.

Connect the AC adaptor when using the Wake-up on LAN function. The battery retention time will be shorter than the times listed in this manual when this function is enabled. Refer to the section in chapter 6, *Retaining data with power off*.

Enabled	Enables Wake-up on LAN from shutdown.
Disabled	Disables Wake-up on LAN from shutdown. (Default)

Built-in LAN

This feature enables or disables the Built-in LAN.

Enabled	Enables Built-in LAN functions (Default).
Disabled	Disables Built-in LAN functions.

USB

USB KB/Mouse Legacy Emulation

You can use this option to enable or disable USB keyboard/mouse legacy emulation so that, even if your operating system does not support USB devices, you can still use a standard USB mouse and keyboard - to achieve this you should set the appropriate option(s) to Enabled.

Enabled	Enables the USB KB/Mouse Legacy Emulation function (Default).
Disabled	Disables the USB KB/Mouse Legacy Emulation function.

USB-FDD Legacy Emulation

Use this option to enable or disable USB floppy diskette drive legacy emulation. If your operating system does not support USB, you can still use a USB floppy diskette drive by setting the **USB-FDD Legacy Emulation** item to **Enabled**.

Enabled	Enables the USB floppy diskette drive legacy emulation function (Default).
Disabled	Disables the USB floppy diskette drive legacy emulation function.

SATA

eSATA

This feature allows you to set conditions for SATA.

Enabled	Enables the eSATA port. (Default)
Disabled	Disables the eSATA port in order to save power.

SATA Interface setting

This feature allows you to set SATA interface setting.

Performance	Let HDD/SSD work with maximum performance. (Default)
Battery life	Let HDD/SSD work with battery life mode. If this setting is selected, this caused performance down.

Chapter 8

Troubleshooting

TOSHIBA have designed this computer for durability, however, should problems occur you are able to use the procedures detailed in this chapter to help determine the cause.

All users should become familiar with this chapter as knowing what might go wrong can help prevent problems from occurring in the first place.

Problem solving process

Resolving problems will be much easier if you observe the following guidelines:

- Stop immediately when you recognize a problem exists as taking further action may result in data loss or damage, or you may destroy valuable problem related information that can help solve the problem.
- Observe what is happening - write down what the system is doing and what actions you performed immediately before the problem occurred. If you have a printer attached, print a copy of the screen using the computer's **PRTSC** key.

Please also be aware that the questions and procedures described in this chapter are meant only as a guide, they are not definitive problem solving techniques. In reality many problems can be solved simply, but a few may require help from your reseller, dealer or service provider - if you find you need to consult others, be prepared to describe the problem in as much detail as possible.

Preliminary checklist

You should always consider the simplest solution first - the items detailed in this checklist are easy to fix and yet can cause what appears to be a serious problem:

- Make sure you turn on all peripheral devices before you turn on the computer - this includes your printer and any other external device you are using.
- Before you attach an external device you should first turn the computer off, then when you turn the computer back on again it will recognize the new device.

- Make sure all optional accessories are configured properly in the computer's setup program and that all required driver software has been loaded (please refer to the documentation included with the optional accessories for further information on its installation and configuration).
- Check all cables to ensure they are correctly and firmly attached to the computer - loose cables can cause signal errors.
- Inspect all connecting cables for loose wires and all connectors for loose pins.
- Check that your floppy diskette, CD or DVD media is correctly loaded and, in the case of a floppy diskette, that its write protect tab is correctly set.

Always try to make detailed notes of your observations and keep them in a permanent error log - this will help you to describe your problems to your reseller, dealer or service provider. In addition, if a problem recurs, the log you have made will help to identify the problem faster.

Analyzing the problem

Sometimes the computer will give you clues that can help you identify why it is malfunctioning. In view of this you should keep the following questions in mind:

- Which part of the computer is not operating properly - keyboard, hard disk drive, display panel, touch pad, touch pad control buttons - as each device will produce different symptoms.
- Check the options within the operating system to ensure that its configuration is set properly.
- What appears on the display? Does it display any messages or random characters? If you have a printer attached, print a copy of the screen using the **PRTS** key and, if possible, look up the messages in the documentation included with the computer, software or operating system.
- Check that all connecting cables are correctly and firmly attached as loose cables can cause erroneous or intermittent signals.
- Do any indicators light, if so, which ones, what color are they and do they stay on or blink? Write down what you see.
- Do you hear any beeps, if so how many, are they long or short and are they high pitched or low pitched? In addition, is the computer making any unusual noises? Write down what you hear.

Record your observations so you can describe them in detail to your reseller, dealer or service provider.

Software	<p>The problems may be caused by your software or disk. If you cannot load a software package, the media may be damaged or the program might be corrupted - in these instances try loading another copy of the software if possible.</p> <p>If an error message appears while you are using a software package you should refer to the documentation supplied with it as this will usually include a problem solving section or a summary of error messages.</p> <p>Next, you should check any error messages against the operating system documentation.</p>
Hardware	<p>If you cannot find a software problem, you should then check the setup and configuration of your hardware. First run through the items in the preliminary checklist as described previously then, if you still cannot correct the problem, try to identify the source - the next section provides checklists for individual components and peripherals.</p>

Before using a peripheral device or application software that is not an authorized Toshiba part or product, make sure the device or software can be used with your computer. Use of incompatible devices may cause injury or may damage your computer.

Hardware and system checklist

This section discusses problems caused by your computer's hardware or attached peripherals. Basic problems may occur in the following areas:

- System start-up
- Self test
- Power
- Password
- Keyboard
- Internal display panel
- Hard disk drive
- DVD-ROM drive
- DVD Super Multi drive
- BD-Writer drive
- BD-Combo drive
- USB floppy diskette drive
- ExpressCard
- SD/SDHC/SDXC Card
- Memory Stick
- xD picture card
- MultiMediaCard
- Pointing Device
- Fingerprint Sensor
- USB device
- eSATA device
- Additional memory module
- Sound system
- External monitor
- LAN
- Wireless LAN
- Bluetooth

System start-up

When the computer does not start properly, check the following items:

- Self Test
- Power Sources
- Power-on Password

Self test

While booting up the computer, self test is executed automatically and the **TOSHIBA** logo is displayed on the screen.

This message remains on the screen for a few seconds.

If the self test is successful, the computer tries to load the operating system according to how the **Boot Priority** option is set within the TOSHIBA HW Setup program.

If any of the following conditions are present, the self test has failed:

- The computer stops and does not proceed to display information or messages except for the TOSHIBA logo.
- Random characters appear on the screen and the system does not function normally.
- The screen displays an error message.

In these instances, turn off the computer, check all cable connections and then restart it - if the self test fails again, contact your reseller, dealer or service provider.

Power

When the computer is not plugged into an AC power outlet, the battery pack is the primary power source. However, your computer also has a number of other power resources, including an intelligent power supply and a Real Time Clock (RTC) battery, all of which are interrelated with any one having the ability to produce apparent power problems.

This section provides checklists for AC power and the battery. If you cannot resolve a problem after following them, the cause may lie with another power related resource - in such an instance you should contact your reseller, dealer or service provider.

Overheating power down

If the processor's temperature reaches an unacceptably high level with either setting, the computer will automatically shut down to prevent any damage - in this instance all unsaved data in memory will be lost.

Problem	Procedure
Computer shuts down and DC IN indicator blinks amber	Leave the computer off until the DC IN indicator stops blinking.

*It is recommended to leave the computer off until the interior reaches room temperature even though the **DC IN** indicator stops blinking.*

If the computer has reached room temperature and it still does not start, or if it starts but shuts down quickly, contact your reseller, dealer or service provider.

Computer shuts down and its DC IN indicator is flashing white	This indicates a problem with the heat dispersal system - you should contact your reseller, dealer or service provider.
--	---

AC power

If you have trouble turning on the computer with the AC adaptor connected you should check the status of the **DC IN** indicator. Please refer to Chapter 6, [Power and Power-Up Modes](#), for further information.

Problem	Procedure
AC adaptor doesn't power the computer (DC IN indicator does not glow white)	<p>Check the connections to make sure that the power cord/adaptor is firmly connected to the computer and a working power outlet.</p> <p>Check the condition of the cord and terminals. If the cord is frayed or damaged it should be replaced, while if the terminals are soiled, they should be cleaned with a clean cotton cloth.</p> <p>If the AC adaptor still does not power the computer, you should contact your reseller, dealer or service provider.</p>

Battery

If you suspect a problem with the battery, you should check the status of the **DC IN** indicator as well as the **Battery** indicator. Please refer to Chapter 6, *Power and Power-Up Modes*, for more information on these indicators, together with general battery operation.

Problem	Procedure
Battery doesn't power the computer	The battery may be discharged - connect the AC adaptor to recharge the battery.
Battery doesn't charge when the AC adaptor is attached (Battery indicator does not glow amber).	<p>If the battery is completely discharged, it will not begin charging immediately, in these instances you should wait a few minutes before trying again. If the battery still does not charge, you should check that the power outlet the AC adaptor is connected to is supplying power - this can be tested by plugging another appliance into it.</p> <p>Check whether the battery is hot or cold to the touch - if so, it will not charge properly and should be allowed to reach room temperature before you try again.</p> <p>Unplug the AC adaptor and remove the battery to make sure its connecting terminals are clean - if necessary wipe them with a soft dry cloth lightly dipped in alcohol.</p> <p>Connect the AC adaptor and replace the battery, taking care to ensure that it is securely seated in the computer.</p> <p>Check the Battery indicator - if it does not glow, allow the computer to charge the battery for at least twenty minutes. If the Battery indicator starts to glow after this period, allow the battery to continue to charge for at least another twenty minutes before turning on the computer.</p> <p>However, if the indicator still does not glow, the battery may be at the end of its operating life and should be replaced. However, if you do not believe the battery is at the end of its operating life, you should speak to your reseller, dealer or service provider.</p>
Battery doesn't power the computer as long as expected	<p>If you frequently recharge a partially charged battery, the battery might not charge to its full potential - in these instances you should fully discharge the battery and then attempt to charge it again.</p> <p>Check the Power saver option under Select a power plan in the Power Options.</p>

Real Time Clock

Problem	Procedure
<p>The following message is Displayed on the screen:</p> <p>RTC Power Failure. Check system. Then press [F2] key.</p>	<p>The charge in the Real Time Clock (RTC) battery has run out - you will need to set the date and time in the BIOS setup application by using the following steps:</p> <ol style="list-style-type: none"> 1. Turn on the computer while pressing the F2 key. 2. Release the F2 key when the TOSHIBA Leading Innovation >>> screen appears - the BIOS setup application will load. 3. Set the date in the System Date field. 4. Set the time in the System Time field. 5. Press F10 - a confirmation message will be displayed. 6. Press the Y key - the BIOS setup application will end and the computer will restart.

Password

Problem	Procedure
Cannot enter password	Please refer to the TOSHIBA Password Utility section in Chapter 6, Power and Power-Up Modes , for further information.

Keyboard

Keyboard problems can be caused by the setup and configuration of the computer - please refer to Chapter 5, [The Keyboard](#), for further information.

Problem	Procedure
Some letter keys produce numbers	Check that the numeric keypad overlay is not activated - press the FN + F11 hot key and try typing again.
Output to screen is garbled	<p>Please refer to your software's documentation to ensure that its is not remapping the keyboard in any way (remapping involves changing or reassigning the function of each key).</p> <p>If you are still unable to use the keyboard, you should contact your reseller, dealer or service provider.</p>

Internal display panel

Apparent computer's display panel problems may be related to the computer's setup and configuration - please refer to Chapter 7, *HW Setup*, for further information.

Problem	Procedure
No display	Press the FN + F5 hot keys to adjust the display priority, and to make sure it is not set for output to an external monitor.
Markings appear on the computer's display panel.	These marks may have come from contact with the keyboard and Touch Pad while the display panel has been closed. You should try to remove the marks by gently wiping the display panel with a clean dry cloth or, if this fails, with a good quality LCD screen cleaner. In this latter instance you should always follow the instructions with the screen cleaner and always ensure you let the display panel dry properly before closing it.
Problems above remain unresolved or other problems occur	You should initially refer to the documentation supplied with you software to determine if it is this that is causing the problems. Alternatively you may wish to run the TOSHIBA PC Diagnostic Tool to check the general operation of the computer. If you are still unable to resolve the problem, contact your reseller, dealer or service provider.

Hard disk drive

Problem	Procedure
Computer does not boot from hard disk drive	<p>Check to see whether that is a floppy diskette in the floppy diskette drive or a CD-ROM/DVD-ROM in the optical disc drive - if so remove it and try to start the computer again.</p> <p>If this has no effect, check the Boot Priority setting within the TOSHIBA HW Setup utility - please refer to the <i>Boot Priority</i> section in Chapter 7, <i>HW Setup</i>, for further information.</p> <hr/> <p>Please refer to your operating system documentation in order to determine whether there is a problem with any of the operating system files or settings.</p>
Slow performance	<p>The files on the hard disk drive may be fragmented - in this instance you should run the disk Defragmentation utility to check the condition of your files and the hard disk drive. Please refer to the operating system's documentation or online Help File for further information on operating and using the Defragmentation utility.</p> <hr/> <p>As a last resort you should reformat the hard disk drive and then reload the operating system and all other files and data. If you are still unable to resolve the problem, contact your reseller, dealer or service provider.</p>

DVD Super Multi drive

For more information, refer to Chapter 4, *Operating Basics*.

Problem	Procedure
<p>You cannot access a CD/DVD in the drive</p>	<p>Make sure the drive's disc tray is securely closed. Press gently until it clicks into place.</p> <hr/> <p>Open the disc tray and make sure the CD/DVD is properly seated. It should lie flat with the label facing up.</p> <hr/> <p>A foreign object in the disc tray could block laser light from reading the CD/DVD. Make sure there is no obstruction. Remove any foreign object.</p> <hr/> <p>Check whether the CD/DVD is dirty. If it is, wipe it with a clean cloth dipped in water or a neutral cleaner. Refer to the <i>Media care</i> section in Chapter 4, for details on cleaning.</p>
<p>Some CD/DVDs run correctly, but others do not</p>	<p>The software or hardware configuration may be causing a problem. Make sure the hardware configuration matches your software's needs. Check the CD/DVD's documentation.</p> <hr/> <p>Check the type of CD/DVD you are using. The drive supports:</p> <p>DVD-ROM: DVD-ROM, DVD-Video</p> <p>CD-ROM: CD-DA, CD-Text, Photo CD (single/multi-session), CD-ROM Mode 1, Mode 2, CD-ROM XA Mode 2 (Form1, Form2), Enhanced CD (CD-EXTRA), Addressing Method 2</p> <p>Recordable DVD: DVD-R/-R DL, DVD+R/+R DL, DVD-RW, DVD+RW, DVD-RAM</p> <hr/> <p>Check the region code on the DVD. It must match that on the DVD Super Multi drive. Region codes are listed in the <i>Optical disc drives</i> section in Chapter 2, <i>The Grand Tour</i>.</p>

BD-Writer/BD-Combo drive

For further information, please refer to Chapter 4, *Operating Basics*.

Problem	Procedure
You cannot access a CD/DVD/BDs in the drive	<p>Make sure the drive's disc tray is securely closed - press it gently into the computer until it clicks into place.</p> <hr/> <p>Open the drive's disc tray and ensure the CD, DVD or BD is properly seated - it should lie flat with the label facing upwards.</p> <hr/> <p>A foreign object in the drive's disc slot could block laser light from reading the CD, DVD or BD - remove any foreign objects or obstructions that may be present.</p> <hr/> <p>Check whether the CD, DVD or BD is dirty - if it is, wipe it with a clean cloth lightly dipped in water or a neutral cleaner. Please refer to the <i>Media care</i> section in Chapter 4, for further details on cleaning the media.</p>
Some CD/DVD/BDs run correctly, but others do not	<p>The computer's software or hardware configuration may be causing a problem. Ensure that these configurations match the requirements of the CD/DVD/BDs media (refer to the CD's, DVD's or BD's documentation if available).</p> <hr/> <p>Check the type of CD, DVD or BD media that you are using - the drive supports the following:</p> <p>BD: BD-ROM</p> <p>DVD: DVD-ROM, DVD-Video</p> <p>CD: CD-DA, CD-Text, Photo CD™ (single/multi-session), CD-ROM Mode 1, Mode 2, CD-ROM XA Mode 2 (Form1, Form2), Enhanced CD (CD-EXTRA), Addressing Method 2</p>

USB floppy diskette drive

For further information, please refer to Chapter 3, *Hardware, Utilities and Options*.

Problem	Procedure
Drive does not operate	Check the connection between the computer and the drive to ensure that it is properly attached.
Some programs run correctly but others do not	The computer's software or hardware configuration may be causing a problem - ensure that these configurations match your requirements (refer to any relevant documentation, for example that supplied with any software in use, for further information).
You cannot access the external floppy diskette drive	Try another floppy diskette in the drive - if you are able to access this disk then it indicates the original disk and not the drive is probably causing the problem. If you are still unable to resolve the problem, contact your reseller, dealer or service provider.

SD/SDHC/SDXC memory card, miniSD/microSD Card

For further information, please refer to Chapter 8, *Optional devices*.

Problem	Procedure
SD/SDHC/SDXC memory card, miniSD/microSD Card error occurs	Remove the SD/SDHC/SDXC memory card, miniSD/microSD Card from the computer and then reinsert it in order to ensure it is firmly connected. If the problem persists, then you should refer to the documentation supplied with your SD/SDHC/SDXC memory card, miniSD/microSD Card for further information.
You cannot write to an SD/SDHC/SDXC memory card	Remove the SD/SDHC/SDXC memory card from the computer and check to ensure that it is not write protected.
You cannot read a file	Check to ensure the required file is actually on the SD/SDHC/SDXC memory card, miniSD/microSD Card that is inserted into the computer. If you are still unable to resolve the problem, contact your reseller, dealer or service provider.

Memory Stick

For further information, please refer to Chapter 3, *Hardware, Utilities and Options*.

Problem	Procedure
Memory Stick/Memory Stick PRO/Memory Stick PRO Duo error occurs	<p>Remove the Memory Stick/Memory Stick PRO/Memory Stick PRO Duo from the computer and then reinsert it in order to ensure it is firmly connected.</p> <p>If the problem persists, then you should refer to the documentation supplied with your Memory Stick/Memory Stick PRO/Memory Stick PRO Duo for further information.</p>
You cannot write to an Memory Stick/Memory Stick PRO/Memory Stick PRO Duo	Remove the Memory Stick/Memory Stick PRO/Memory Stick PRO Duo from the computer and check to ensure that it is not write protected.
You cannot read a file	<p>Check to ensure the required file is actually on the Memory Stick/Memory Stick PRO/Memory Stick PRO Duo that is inserted into the computer.</p> <p>If you are still unable to resolve the problem, contact your reseller, dealer or service provider.</p>

xD picture card

For further information, please refer to Chapter 3, *Hardware, Utilities and Options*.

Problem	Procedure
xD picture card error occurs	<p>Remove the xD picture card from the computer and then reinsert it in order to ensure it is firmly connected.</p> <p>If the problem persists, then you should refer to the documentation supplied with your xD picture card for further information.</p>
You cannot read a file	<p>Check to ensure the required file is actually on the xD picture card that is inserted into the computer.</p> <p>If you are still unable to resolve the problem, contact your reseller, dealer or service provider.</p>

MultiMediaCard

For further information, please refer to Chapter 3, *Hardware, Utilities and Options*.

Problem	Procedure
MultiMediaCard error occurs	Remove the MultiMediaCard from the computer and then reinsert it in order to ensure it is firmly connected. If the problem persists, then you should refer to the documentation supplied with your MultiMediaCard for further information.
You cannot write to a MultiMediaCard	Remove the MultiMediaCard from the computer and check to ensure that it is not write protected.
You cannot read a file	Check to ensure the required file is actually on the MultiMediaCard that is inserted into the computer. If you are still unable to resolve the problem, contact your reseller, dealer or service provider.

Pointing device

If you are using a USB mouse, you should also refer to both the *USB device* section in this chapter, and the documentation supplied with your mouse.

Touch Pad

Problem	Procedure
On-screen pointer does not respond to pointing device operation	In this instance the system might be busy - Try moving the mouse again after waiting a short while. Check to make sure that the Touchpad button above is not disabled. Press it so that the light indicator activates on the touchpad.
Double-tapping does not work	In this instance, you should initially try changing the double-click speed setting within the Mouse Control utility. <ol style="list-style-type: none"> 1. To access this utility, click Start -> Control Panel -> Hardware and Sound -> Mouse icon. 2. Within the Mouse Properties window, click the Buttons tab. 3. Set the double-click speed as required and click OK.

Problem	Procedure
The mouse pointer moves too fast or too slow	<p>In this instance, you should initially try changing the speed setting within the Mouse Control utility.</p> <ol style="list-style-type: none"> 1. To access this utility, click Start -> Control Panel -> Hardware and Sound -> Mouse icon. 2. Within the Mouse Properties window, click the Pointer Options tab. 3. Set the pointer speed as required and click OK. <p>If you are still unable to resolve the problem, contact your reseller, dealer or service provider.</p>
The reaction of Touch pad is either too sensitive or not sensitive enough.	<p>Adjust the touch Sensitivity.</p> <ol style="list-style-type: none"> 1. Click Start -> Control Panel -> Hardware and Sound -> Mouse icon. 2. Within the Mouse Properties window, click the Device Settings tab. 3. Click the Settings button. 4. Properties for Synaptics TouchPad V7.2 on PS/2 Port window is displayed. 5. Select Sensitivity from the Select an item list. 6. Select Touch Sensitivity and move the slider bar to adjust the sensitivity. 7. Click the OK button.

USB mouse

Problem	Procedure
On-screen pointer does not respond to mouse operation	<p>In this instance the system might be busy - Try moving the mouse again after waiting a short while.</p> <hr/> <p>Remove the mouse from the computer and then reconnect it to a free USB port it in order to ensure it is firmly attached.</p>
Double-clicking does not work	<p>In this instance, you should initially try changing the double-click speed setting within the Mouse Control utility.</p> <ol style="list-style-type: none"> 1. To access this utility, click Start -> Control Panel -> Hardware and Sound -> Mouse. 2. Within the Mouse Properties window, click the Buttons tab. 3. Set the double-click speed as required and click OK.

Problem	Procedure
The on-screen pointer moves too fast or too slow	<p>In this instance, you should initially try changing the speed setting within the Mouse Control utility.</p> <ol style="list-style-type: none"> 1. To access this utility, click Start -> Control Panel -> Hardware and Sound -> Mouse. 2. Within the Mouse Properties window, click the Pointer Options tab. 3. Set the pointer speed as required and click OK.
The on-screen pointer moves erratically	<p>The elements of the mouse responsible for detecting movement might be dirty - please refer to the documentation supplied with the mouse for instructions on how to clean it.</p> <p>If you are still unable to resolve the problem, contact your reseller, dealer or service provider.</p>

USB device

In addition to the information in this section, please also refer to the documentation supplied with your USB device.

Problem	Procedure
USB device does not work	<p>Remove the USB device from the computer and then reconnect it to a free port it in order to ensure it is firmly attached.</p> <p>Ensure that any required USB device drivers are properly installed - to achieve this you should refer to both the device documentation and the operating system documentation.</p> <p>If you are using an operating system that does not support USB, you are still able to use a USB mouse and/or USB keyboard by setting the USB KB/Mouse Legacy Emulation option within the TOSHIBA HW Setup utility to Enabled.</p> <p>If you are still unable to resolve the problem, contact your reseller, dealer or service provider.</p>

Sleep and Charge function

For more information and settings, please refer to the [Using the TOSHIBA Sleep Utility](#) section in Chapter 4, [Operating Basics](#).

Problem	Procedure
I cannot use the "Sleep and Charge function".	<p>Sleep and Charge function may be disabled. Select the "Enable Sleep and Charge" check box in the TOSHIBA Sleep utility to enable this function.</p> <hr/> <p>When there is a current overflow of the external device connected to the compatible port, USB bus power (DC5V) supply may be stopped for safety reasons. When this happens, disconnect an external device if some external devices are connected. After that, turn the power of the computer ON/OFF to restore the function. If this function can not be still used even if only one external device is connected, stop using the external device because its current is over the acceptable value of this computer.</p> <hr/> <p>Some external devices may not be able to use the "Sleep and Charge function". In this case, please try one or more of the following methods.</p> <ul style="list-style-type: none"> ■ Select another mode. ■ Turn OFF the computer while external devices are connected. ■ Connect external devices after turning OFF of the computer. <p>If this function can not be still used, change the setting to disable the function and stop using this function.</p>
The battery depletes quickly even when I turned OFF the power of the computer.	<p>If Sleep and Charge function is enabled, the computer's battery will discharge during hibernation or when the computer is turned off. Connect the AC adaptor to the computer or disable the Sleep and Charge function.</p>

Problem	Procedure
<p>External devices connected to the compatible ports do not work when connected to a compatible port.</p>	<p>Some external devices may not work when connected to a compatible port if the Sleep and Charge function is enabled.</p> <p>Reconnect the external device after turning the computer ON.</p> <p>If the external device still does not work, connect device to an USB port that does not have the Sleep and Charge function-compatible icon (⚡) or change to disable the Sleep and Charge function.</p>
<p>The “USB Wakeup function” does not work.</p>	<p>When Sleep and Charge function is enabled, the “USB WakeUp” function does not work for ports that support the Sleep and Charge function.</p> <p>In that case, use an USB port that does not have the Sleep and Charge function-compatible icon (⚡) or change to disable Sleep and Charge function.</p>

eSATA device

In addition to the information in this section, please also refer to the documentation supplied with your eSATA device.

Problem	Procedure
<p>eSATA device does not work</p>	<p>Remove the eSATA device from the computer and then reconnect it to a free port it in order to ensure it is firmly attached.</p> <p>A connected eSATA device may not be recognized if it is connected to the computer’s eSATA/USB combo port while the computer is in Sleep Mode or Hibernation Mode. If this occurs, disconnect the eSATA device and then reconnect the device while the computer is turned on.</p> <p>Ensure that any required eSATA device drivers are properly installed - to achieve this you should refer to both the device documentation and the operating system documentation.</p> <p>If you are still unable to resolve the problem, contact your reseller, dealer or service provider.</p>

Additional memory module

Please also refer to Chapter 3, *Hardware, Utilities and Options*, for further information on installing and removing memory modules.

Problem	Procedure
<p>If there is a memory malfunction, the Power indicator will repeatedly flash (on for 0.5 seconds, off for 0.5 seconds) in the following patterns;</p> <p>If there is an error in only Slot A: amber twice, then white once.</p> <p>If there is an error in only Slot B: amber once, then white twice.</p> <p>If there are errors in both Slot A and Slot B: amber twice, then white twice.</p>	<p>In the event the Power indicator flashes when the computer is turned on, you should first check that the installed memory module(s) are compatible with the computer. If there is an error with a compatible memory module, there is a possibility the memory module is damaged.</p> <hr/> <p>If you determine that an incompatible module has been installed, you should follow the steps as detailed below:</p> <ol style="list-style-type: none"> 1. Turn off the computer. 2. Disconnect the AC adaptor and all peripheral devices. 3. Remove the battery pack. 4. Remove the incompatible memory module. 5. Install the battery and/or connect the AC adaptor. 6. Turn on the computer. <p>If you are still unable to resolve the problem, contact your reseller, dealer or service provider.</p>
<p>An error will occur if a memory module is inserted into Slot B while no memory module is inserted in Slot A.</p>	<p>Remove the memory module from Slot B and insert it into Slot A.</p>

Sound system

In addition to the information in this section, please also refer to the documentation supplied with your audio device.

Problem	Procedure
No sound is heard	<p>Adjust the volume.</p> <p>To increase the volume click the volume up button, and to decrease it click the volume down button.</p> <hr/> <p>Check the software volume settings.</p> <hr/> <p>Please check to see if Mute is turned to Off</p> <hr/> <p>Check to make sure the headphone connection is secure.</p> <hr/> <p>Check within the Windows Device Manager application to ensure the sound device is enabled and that the device is properly working.</p> <p>For further information, please refer to "Troubleshooting in Windows" section of Windows Help and Support.</p>
Annoying sound is heard	<p>In this instance you may be experiencing feedback from either the internal microphone or an external microphone connected to the computer - please refer to Sound System in Chapter 4, Operating Basics, for further information.</p> <p>Volume cannot be adjusted during Windows start up or shut down.</p> <p>If you are still unable to resolve the problem, contact your reseller, dealer or service provider.</p>

External monitor

Please also refer to Chapter 3, *Hardware, Utilities and Options*, and to the documentation supplied with your monitor for further information.

Problem	Procedure
Monitor does not turn on	After confirming that the monitor's power switch is on, you should check the connections to make sure that the power cord/adaptor is firmly connected to the monitor and to a working power outlet.
No display	<p>Try adjusting the contrast and brightness controls on the external monitor.</p> <p>Press the FN + F5 hot key in order to change the display priority and ensure that it is not set for the internal display only.</p> <p>Check to see if the external monitor is connected. When the external monitor is set as the primary display device in extended desktop mode, it will not display when the computer wakes up from Sleep Mode if the external monitor has been disconnected while in Sleep Mode. To keep this from happening, do not disconnect the external monitor while the computer is in Sleep or Hibernation Mode. Remember to turn off the computer before disconnecting the external monitor.</p> <p>When the display panel and an external monitor are set to clone mode and they are turned off by the timer, the display panel or the external monitor may not display when turned on again. If this occurs, press FN + F5 to re-set the display panel and external monitor to clone mode.</p>
Display error occurs	<p>Check that the cable connecting the external monitor to the computer is firmly attached.</p> <p>If you are still unable to resolve the problem, contact your reseller, dealer or service provider.</p>

LAN

Problem	Procedure
Cannot access LAN	Check for a firm cable connection between the LAN jack and the LAN hub.
Wake-up on LAN does not work	Make sure the AC adaptor is connected. The Wake-up on LAN function consumes power even when the system is off. If problems persist, consult your LAN administrator.

Wireless LAN

If the following procedures do not restore LAN access, consult your LAN administrator. For more information on wireless communication, refer to Chapter 4, [Operating Basics](#).

Problem	Procedure
Cannot access Wireless LAN	Make sure the computer's Wireless communication switch is set to on. If problems persist, contact your LAN administrator.

Bluetooth

For further information on Bluetooth wireless communication, please refer to Chapter 4, [Operating Basics](#).

Problem	Procedure
Cannot access Bluetooth device	Check to ensure the computer's Wireless Communication Switch is set to on.
	Check to ensure the Bluetooth Manager application is running on the computer and that power to the external Bluetooth device is turned on.
	Check to ensure that no optional Bluetooth Adaptor is installed in the computer - the built-in Bluetooth hardware cannot operate simultaneously with another Bluetooth controller. If you are still unable to resolve the problem, contact your reseller, dealer or service provider.

TOSHIBA support

If you require any additional help using your computer or if you are having problems operating the computer, you may need to contact TOSHIBA for additional technical assistance.

Before you call

Some problems you experience may be related to software or the operating system so it is important that you investigate other sources of assistance first. Before contacting TOSHIBA, try the following:

- Review troubleshooting sections in the documentation supplied with your software and/or peripheral devices.
- If a problem occurs when you are running software applications, consult the software documentation for troubleshooting suggestions and consider calling the software company's technical support department for assistance.
- Consult the reseller or dealer from where you purchased your computer and/or software - they are your best resource for current information and support.

Where to write

If you are still unable to solve the problem and suspect that it is hardware related, write to TOSHIBA at the location listed in the enclosed warranty booklet or visit <http://www.toshiba-europe.com> on the Internet.

Appendix A

Specifications

This appendix summarizes the computer's technical specifications.

Environmental Requirements

Conditions	Ambient temperature	Relative humidity
Operating	5°C (41°F) to 35°C (95°F)	20% to 80% (noncondensing)
Non-operating	-20°C (-4°F) to 60°C (140°F)	10% to 90% (noncondensing)

Conditions	Altitude (from sea level)
Operating	0 to 3,000 meters
Non-operating	0 to 10,000 meters maximum

Power Requirements

AC adaptor	100-240 volts AC
	50 or 60 hertz (cycles per second)
Computer	19 V DC
	5.0 amperes

Built-in Modem

This information is applicable to the models equipped with a built-in modem.

Network control unit (NCU)

Type of NCU AA

Type of line Telephone line (analog only)

Type of dialing Pulse
Tone

Control command AT commands
EIA-578 commands

Monitor function Computer's speaker

Communication specifications

Communication system Data: Full duplex
Fax: Half duplex

Communication protocol Data
ITU-T-Rec V.21/V.22/V.22bis/V.32/
(Former CCITT) V.32bis/V.34/V.90
Bell 103/212A
Fax
ITU-T-Rec V.17/V.29/V.27ter/V.21 ch2
(Former CCITT)

Communication speed Data transmission and reception
300/1200/2400/4800/7200/9600/12000/14400/
16800/19200/21600/24000/26400/28800/31200/
33600 bps
Data reception only with V.90
28000/29333/30666/32000/33333/34666/36000/

46666/48000/49333/50666/52000/53333/54666/
56000 bps
Fax
2400/4800/7200/9600/12000/14400 bps

Transmitting level -10 dBm

Receiving level -10 to -40 dBm

Input/output impedance 600 ohms \pm 30%

Error correcting MNP class 4 and ITU-T V.42

Data compression MNP class 5 and ITU-T V.42bis

Power supply +3.3V (supplied by computer)

Appendix B

Display Controller and Video mode

Display controller

The display controller interprets software commands into hardware commands that turn particular parts on the screen on or off.

Due to the display panel's increased resolution, lines may appear broken in when displaying images in full-screen text mode.

The display controller also controls the video mode and uses industry standard rules to govern the screen resolution and the maximum number of colors that can be displayed at any one time. Therefore, software written for a given video mode will run on any computer that supports that mode.

Video mode

Video mode settings are configured via the **Display Properties** dialog.

To open the **Display Properties** dialog, click **Start -> Control Panel -> Appearance and Personalization -> Display**.

If you are running some applications (for example a 3D application or video playback and so on), you may see some disturbance, flickering or frame dropping on your screen.

If that occurs, adjust the resolution of display, lowering it until the screen is displayed properly.

Disabling Windows Aero™ may also help correct this issue.

Appendix C

Wireless LAN

This appendix is intended to help you get your Wireless LAN network up and running, with a minimum of parameters.

Card Specifications

Form Factor	PCI Express Mini Card
Compatibility	<ul style="list-style-type: none"> ■ IEEE 802.11 Standard for Wireless LANs ■ Wi-Fi (Wireless Fidelity) certified by the Wi-Fi Alliance. The “Wi-Fi CERTIFIED” logo is a certification mark of the Wi-Fi Alliance.
Network Operating System	<ul style="list-style-type: none"> ■ Microsoft Windows Networking
Media Access Protocol	<ul style="list-style-type: none"> ■ CSMA/CA (Collision Avoidance) with Acknowledgment (ACK)

Radio Characteristics

Radio Characteristics of Wireless LAN module may vary according to:

- Country/region where the product was purchased
- Type of product

Wireless communication is often subject to local radio regulations. Although Wireless LAN wireless networking products have been designed for operation in the license-free 2.4GHz and 5GHz band, local radio regulations may impose a number of limitations to the use of wireless communication equipment.

Refer to the “Information sheet” for regulatory information that may apply in your country/region.

Radio Frequency	■ Band 5GHz (5150-5850 MHz) (Revision a and n)
	■ Band 2.4GHz (2400-2483.5 MHz) (Revision b/g and n)

The range of the wireless signal is related to the transmit rate of the wireless communication. Communications at lower transmit range may travel larger distances.

- The range of your wireless devices can be affected when the antennas are placed near metal surfaces and solid high-density materials.
- Range is also impacted due to “obstacles” in the signal path of the radio that may either absorb or reflect the radio signal.

Supported Frequency Sub-bands

Subject to the radio regulations that apply in the countries/regions, your Wireless LAN module may support a different set of 5 GHz/2.4 GHz channels. Consult your Authorized Wireless LAN or TOSHIBA Sales office for information about the radio regulations that apply in the countries/regions.

2.4GHz Band Channels Sets

(Wireless IEEE 802.11 Revision b, g and n)

Frequency Range Channel ID	2400-2483.5 MHz
1	2412
2	2417
3	2422
4	2427
5	2432
6	2437
7	2442
8	2447
9	2452
10	2457*1
11	2462

12	2467 *2
13	2472 *2

*1 Factory-set default channels

*2 The band width and the channel which can be used depends on the installed wireless LAN module. And the approved channels on using are different at each country or region. When using these channels in any country or region, refer to the addendum sheet which is *Approved Countries/Regions for use*. The channel configuration is managed as follows:

- For wireless clients that operate in a Wireless LAN Infrastructure, the Wireless LAN module will automatically start operation at the channel identified by the Wireless LAN Access Point. When roaming between different access points the station can dynamically switch to another channel if required.
- For Wireless LAN modules installed in wireless clients that operating in a peer-to-peer mode, the module will use the default channel 10.
- In a Wireless LAN Access Point, the Wireless LAN module will use the factory-set default channel (printed in bold), unless the LAN Administrator selected a different channel when configuring the Wireless LAN Access Point device.

5GHz Band Channels Sets (Wireless IEEE 802.11 Revision a and n)

Frequency Range	5150-5850 MHz
Channel ID	
34	5170 *2
36	5180 *2
38	5190 *2
40	5200 *2
42	5210 *2
44	5220 *2
46	5230 *2
48	5240 *2
52	5260 *2
56	5280 *2
60	5300 *2
64	5320 *2
100	5500 *2

104	5520 ^{*2}
108	5540 ^{*2}
112	5560 ^{*2}
116	5580 ^{*2}
120	5600 ^{*2}
124	5620 ^{*2}
128	5640 ^{*2}
132	5660 ^{*2}
136	5680 ^{*2}
140	5700 ^{*2}
149	5745 ^{*2}
153	5765 ^{*2}
157	5785 ^{*2}
161	5805 ^{*2}
165	5825 ^{*2}

*1 Factory-set default channels

*2 The channel which can be used depends on the installed wireless LAN module. And the approved channels on using are different at each country or region. When using these channels in any country or region, refer to the addendum sheet which is *Approved Countries/Regions for use*. The channel configuration is managed as follows:

- For wireless clients that operate in a Wireless LAN Infrastructure, the Wireless LAN module will automatically start operation at the channel identified by the Wireless LAN Access Point. When roaming between different access points the station can dynamically switch to another channel if required.
- In a Wireless LAN Access Point, the Wireless LAN module will use the factory-set default channel (printed in bold), unless the LAN Administrator selected a different channel when configuring the Wireless LAN Access Point device.

Appendix D

Bluetooth wireless technology Interoperability

Bluetooth Adaptor from TOSHIBA are designed to be interoperable with any product with Bluetooth wireless technology that is based on Frequency Hopping Spread Spectrum (FHSS) radio technology, and is compliant to:

- Bluetooth Specification Ver. 3.0+HS, as defined and approved by The Bluetooth Special Interest Group.
- Bluetooth Specification Ver. 2.1+EDR, as defined and approved by The Bluetooth Special Interest Group.
- Logo certification with Bluetooth wireless technology as defined by The Bluetooth Special interest Group.

- *When you use Bluetooth Adaptor from TOSHIBA close to 2.4 GHz Wireless LAN devices, Bluetooth transmissions might slow down or cause errors. If you detect certain interference while you use Bluetooth Adaptor from TOSHIBA, always change the frequency, move your computer to the area outside of the interference range of 2.4 GHz Wireless LAN devices (40 meters/43.74 yards or more) or stop transmitting from your computer. Please visit the following TOSHIBA PC product support website.*
- *Bluetooth and Wireless LAN devices operate within the same radio frequency range and may interfere with one another. If you use Bluetooth and Wireless LAN devices simultaneously, you may occasionally experience a less than optimal network performance or even lose your network connection. If you should experience any such problem, immediately turn off either one of your Bluetooth or Wireless LAN. Please visit the following TOSHIBA PC product support website.*

TOSHIBA PC product support website.

In Europe visit

<http://www.toshiba-europe.com/computers/tnt/bluetooth.htm>

In the United States visit

<http://www.pc.support.global.toshiba.com>

Bluetooth wireless technology and your Health

The products with Bluetooth wireless technology, like other radio devices, emit radio frequency electromagnetic energy. The level of energy emitted by devices with Bluetooth wireless technology however is far much less than the electromagnetic energy emitted by wireless devices like for example mobile phones.

Because products with Bluetooth wireless technology operate within the guidelines found in radio frequency safety standards and recommendations, TOSHIBA believes Bluetooth wireless technology is safe for use by consumers. These standards and recommendations reflect the consensus of the scientific community and result from deliberations of panels and committees of scientists who continually review and interpret the extensive research literature.

In some situations or environments, the use of Bluetooth wireless technology may be restricted by the proprietor of the building or responsible representatives of the organization. These situations may for example include:

- Using the equipment with Bluetooth wireless technology on board of airplanes, or
- In any other environment where the risk of interference to other devices or services is perceived or identified as harmful.

If you are uncertain of the policy that applies on the use of wireless devices in a specific organization or environment (e.g. airports), you are encouraged to ask for authorization to use the device with Bluetooth wireless technology prior to turning on the equipment.

Regulatory statements

General

This product complies with any mandatory product specification in any country/region where the product is sold. In addition, the product complies with the following.

European Union (EU) and EFTA

This equipment complies with the R&TTE directive 1999/5/EC and has been provided with the CE mark accordingly.

The correction of interference caused by such unauthorized modification, substitution or attachment will be the responsibility of the user.

Caution: Exposure to Radio Frequency Radiation

The radiated output power of the Bluetooth Adaptor from TOSHIBA is far below the FCC radio frequency exposure limits. Nevertheless, the Bluetooth Adaptor from TOSHIBA shall be used in such a manner that the potential for human contact during normal operation is minimized.

The installer of this radio equipment must ensure that the antenna is located or pointed such that it does not emit RF field in excess of Health Canada limits for the general population; consult Safety Code 6, obtainable from Health Canada's website www.hc-sc.gc.ca/rpb.

Appendix E

AC Power Cord and Connectors

The power cord's AC input plug must be compatible with the various international AC power outlets and the cord must meet the standards for the country/region in which it is used. All cords must meet the following specifications:

Length:	Minimum 1.7 meters
Wire size:	Minimum 0.75 mm ²
Current rating:	Minimum 2.5 amperes
Voltage rating:	125 or 250 VAC (depending on country/region's power standards)

Certification agencies

U.S. and Canada:	UL listed and CSA certified No. 18 AWG, Type SVT or SPT-2		
Australia:	AS		
Japan:	DENANHO		
<i>Europe:</i>			
Austria:	OVE	Italy:	IMQ
Belgium:	CEBEC	The Netherlands:	KEMA
Denmark:	DEMKO	Norway:	NEMKO
Finland:	FIMKO	Sweden:	SEMKO
France:	LCIE	Switzerland:	SEV
Germany:	VDE	United Kingdom:	BSI

In Europe, two conductors power cord must be VDE type, H05VVH2-F or H03VVH2-F and for three conductors power cord must be VDE type, H05VV-F.

For the United States and Canada, two pin plug configuration must be a 2-15P (250V) or 1-15P (125V) and three pin plug configuration must be 6-15P (250V) or 5-15P (125V) as designated in the U.S. National Electrical code handbook and the Canadian Electrical Code Part II.

The following illustrations show the plug shapes for the U.S.A. and Canada, the United Kingdom, Australia and Europe.

USA

UL approved

United Kingdom

BS approved

Australia

AS approved

Europe

Approved by the appropriate agency

Canada

CSA approved

Appendix F

TOSHIBA PC Health Monitor

The TOSHIBA PC Health Monitor application proactively monitors a number of system functions such as power consumption, battery health and the system cooling, informing you of significant system conditions. This application recognizes the system and individual component serial numbers, and will track specific activities related to the computer and their usage.

The collected information includes device operation time and number of actuations or status changes (i.e.: number of power button and **FN** key combination uses, AC adaptor, battery, LCD, fan, HDD, sound volume, wireless communication switch, TOSHIBA Express Port Replicator and USB information), date of initial system use, and also computer and device usage (i.e.: power settings, battery temperature and recharging, CPU, memory, backlight illumination time, and temperatures for various devices). The stored data uses a very small portion of the total hard disk capacity, approximately 3MB or less per year.

This information is used to identify and provide a notification of system conditions which may effect the performance of your Toshiba computer. It may also be used to help diagnose problems should the computer require service by Toshiba or Toshiba's authorized service providers. Additionally, Toshiba may also use this information for quality assurance analysis.

Subject to the use restrictions above, the HDD data logged may be transferred to entities located outside of your country or region of residence (e.g., European Union). Those countries may or may not have the same data protection laws or data protection levels as required by your home country or region.

Once enabled, you may disable the TOSHIBA PC Health Monitor at any time by uninstalling the software via **Uninstall a program** in the **Control Panel**. Doing so will automatically delete all collected information from the HDD.

The TOSHIBA PC Health Monitor software does not extend or modify Toshiba's obligations under its standard limited warranty in any way. Toshiba's standard limited warranty terms and limitations apply.

Starting the TOSHIBA PC Health Monitor

The TOSHIBA PC Health Monitor can be started using the following methods:

- Click **Start -> All Programs -> TOSHIBA -> Utilities -> PC Health Monitor**.
- Click the icon () in the notification area, then click the “**Enable PC Health Monitor...**” message the first time you run the application and “**Run PC Health Monitor...**” every time thereafter.

No matter which method is used, the TOSHIBA PC Health Monitor explanation screen will be displayed.

Clicking **Next** will display the **PC Health Monitor Software Notice & Acceptance** screen. Please carefully read the information displayed. Selecting **ACCEPT** and clicking **OK** will enable the program. By enabling the TOSHIBA PC Health Monitor software, you agree with these terms and conditions and to the use and sharing of the collected information. Once the program is enabled, the TOSHIBA PC Health Monitor screen is displayed, and the program will begin monitoring system functions and collecting information.

Appendix G

Legal Footnotes

This chapter states the Legal Footnotes information applicable to TOSHIBA computers. In the text in this manual, *XX is used to show which Legal Footnotes description is related to TOSHIBA computers.

Description(s) related to this computer are marked with a blue *XX in this manual. Clicking on *XX will display the related description.

Non-applicable Icons*1

Certain computer chassis are designed to accommodate all possible configurations for an entire product series. Therefore, please be aware that your selected model may not have all the features and specifications corresponding to all of the icons or switches shown on the computer chassis.

CPU*2

Central Processing Unit ("CPU") Performance Legal Footnotes.

CPU performance in your computer product may vary from specifications under the following conditions:

- use of certain external peripheral products
- use of battery power instead of AC power
- use of certain multimedia, computer generated graphics or video applications
- use of standard telephone lines or low speed network connections
- use of complex modeling software, such as high end computer aided design applications
- use of several applications or functionalities simultaneously
- use of computer in areas with low air pressure (high altitude >1,000 meters or >3,280 feet above sea level)
- use of computer at temperatures outside the range of 5°C to 30°C (41°F to 86°F) or >25°C (77°F) at high altitude (all temperature references are approximate and may vary depending on the specific computer model - please refer to your computer documentation or visit the Toshiba website at www.pcsupport.toshiba.com for details).

CPU performance may also vary from specifications due to design configuration.

Under some conditions, your computer product may automatically shut-down. This is a normal protective feature designed to reduce the risk of lost data or damage to the product when used outside recommended conditions. To avoid risk of lost data, always make back-up copies of data by periodically storing it on an external storage medium. For optimum performance, use your computer product only under recommended conditions. Read additional restrictions in your product documentation. Contact Toshiba technical service and support, refer to [TOSHIBA support](#) section in Chapter 8, [Troubleshooting](#), for more information.

64-Bit Computing

64-bit processors are designed to take advantage of 32 and 64 bit computing.

64-bit computing requires that the following hardware and software requirements are met:

- 64-bit Operating System
- 64-bit CPU, Chipset and BIOS (Basic Input/Output System)
- 64-bit Device drivers
- 64-bit applications

Certain device drivers and/or applications may not be compatible with a 64-bit CPU and therefore may not function properly.

Memory (Main System)*3

Part of the main system memory may be used by the graphics system for graphics performance and therefore reduce the amount of main system memory available for other computing activities. The amount of main system memory allocated to support graphics may vary depending on the graphics system, applications utilized, system memory size and other factors. Computers configured with a 32-bit operating system can address up to 3GB of system memory. Computers configured with a 64-bit operating system can address 4GB or more of system memory.

Battery Life*4

Battery life may vary considerably depending on product model, configuration, applications, power management settings and features utilized, as well as the natural performance variations produced by the design of individual components. Published battery life numbers are achieved on select models and configurations tested by Toshiba at the time of publication. Recharge time varies depending on usage. Battery may not charge while computer is consuming full power.

After going through many charge and discharge cycles, the battery will lose its ability to perform at maximum capacity and will need to be replaced. This is a normal phenomenon for all batteries. To purchase a new battery pack, see the accessories information that is shipped with your computer.

Hard Disk Drive (HDD) Capacity*5

One Gigabyte (GB) means $10^9 = 1,000,000,000$ bytes using powers of 10. The computer operating system, however, reports storage capacity using powers of 2 for the definition of $1 \text{ GB} = 2^{30} = 1,073,741,824$ bytes, and therefore shows less storage capacity. Available storage capacity will also be less if the product includes one or more pre-installed operating systems, such as Microsoft Operating System and/or pre-installed software applications, or media content. Actual formatted capacity may vary.

LCD*6

Over a period of time, and depending on the usage of the computer, the brightness of the LCD screen will deteriorate. This is an intrinsic characteristic of LCD technology.

Maximum brightness is only available when operating in AC power mode. Screen will dim when the computer is operated on battery power and you may not be able to increase the brightness of the screen.

Graphics Processor Unit (“GPU”)*7

Graphics processor unit (“GPU”) performance may vary depending on product model, design configuration, applications, power management settings and features utilized. GPU performance is only optimized when operating in AC power mode and may decrease considerably when operating in battery power mode.

Total Available Graphics Memory is the total of, as applicable, Dedicated Video Memory, System Video Memory and Shared System Memory. Shared System Memory will vary depending on system memory size and other factors.

Wireless LAN*8

The transmission speed over the wireless LAN and the distance over which wireless LAN can reach may vary depending on surrounding electromagnetic environment, obstacles, access point design and configuration, and client design and software/hardware configurations.

The actual transmission speed will be lower than the theoretical maximum speed.

Copy Protection

Applicable copy protection standards included in certain media may prevent or limit recording or viewing of the media.

Appendix H

If your computer is stolen

Always take care of your computer and try to prevent it from being stolen. You are the owner of a valuable technical device, which may be highly attractive to thieves, so please do not leave it unattended in a public place. To further help protect against theft, security cables can be bought for use with your notebook when it is being used at home or in the office.

Make a note of your computer's machine type, model number, and serial number, and put it in a safe place. You will find this information on the underside of your notebook. Please also keep the receipt of the computer you purchased.

Should your computer be stolen, however, we'll help you try to find it. Before contacting TOSHIBA, please prepare the following information which is necessary to uniquely identify your computer:

- In which country was your computer stolen?
- What type of machine do you have?
- What was the model number (PA number)?
- What was the serial number (8 digits)?
- When was it stolen, i.e. date?
- What is your address, phone, and fax number?

To register the theft on paper, please follow these procedures:

- Fill in the TOSHIBA Theft Registration form (or a copy of it) below.
- Attach a copy of your receipt showing where your computer was purchased.
- Either fax or send the receipt and registration form to the address below.

To register the theft online, please follow these procedures:

- Visit www.toshiba-europe.com on the Internet. In the product area, choose **Computer Systems**.
- In the Computer Systems page, open the **Support & Downloads** menu and choose the **Stolen Units Database** option.

Your entries are used to track your computer at our service points.

Glossary

The terms in this glossary cover topics related to this manual. Alternate naming is included for reference.

Abbreviations

AC: Alternating current

ACPI: Advanced Configuration and Power Interface

AMT: Intel Active Management Technology

ASCII: American Standard Code for Information Interchange

BIOS: basic input/output system

bps: bits per second

CD: compact disc

CD-ROM: Compact Disc Read-Only Memory

CD-RW: Compact Disc-ReWritable

CMOS: complementary metal-oxide semiconductor

CPU: central processing unit

CRT: cathode ray tube

DC: direct current

DDC: display data channel

DDR: double data rate

DIMM: dual inline memory module

DVD: digital versatile disc

DVD-R: Digital Versatile Disc-Recordable

DVD-RAM: Digital Versatile Disc-Random Access Memory

DVD-R (Dual Layer): Digital Versatile Disc Recordable Dual Layer

DVD-ROM: Digital Versatile Disc-Read Only Memory

DVD-RW: Digital Versatile Disc-ReWritable

DVD+R (Double Layer): Digital Versatile Disc Recordable Double Layer

eSATA: external Serial ATA

FDD: floppy diskette drive

FIR: fast infrared

GB: gigabyte
HDD: hard disk drive
IDE: integrated drive electronics
IEEE: Institute of Electrical and Electronics Engineers
IMSM: Intel Matrix Storage Manager
I/O: input/output
IRQ: interrupt request
KB: kilobyte
LAN: local area network
LCD: liquid crystal display
LED: light emitting diode
MB: megabyte
MMC: multi media card
OCR: optical character recognition (reader)
PC: personal computer
PCI: peripheral component interconnect
RAM: random access memory
RGB: red, green, and blue
ROM: read only memory
RTC: real time clock
S/P DIF: Sony/Philips Digital Interface Format
SDRAM: synchronous dynamic random access memory
SLI: Scalable Link Interface
SO-DIMM: small-outline dual in line memory module
SSD: Solid state drive
TFT: thin-film transistor
USB: Universal Serial Bus
UXGA: ultra extended graphics array
VGA: video graphics array
WAN: wide area network
WSXGA: wide super extended graphics array
WSXGA+: wide super extended graphics array plus
WUXGA: Wide Ultra Extended Graphics Array
WXGA: wide extended graphics array
WXGA+: wide extended graphics array plus
XGA: extended graphics array

A

AccuPoint: A pointing device integrated into the TOSHIBA computer keyboard.

adaptor: A device that provides a compatible connection between two units. For example, the computer's internal display adapter receives information from the software and translates it into images on the screen. An adapter can take a number of forms, from a microprocessor to a simple connector: An intelligent adapter (one that is capable of doing some processing) may also be called a controller.

alphanumeric: Keyboard characters including letters, numbers and other symbols, such as punctuation marks or mathematical symbols.

alternating current (AC): Electric current that reverses its direction of flow at regular intervals.

analog signal: A signal whose characteristics such as amplitude and frequency vary in proportion to (are an analog of) the value to be transmitted. Voice communications are analog signals.

application: A group of programs that together are used for a specific task such as accounting, financial planning, spreadsheets, word processing and games.

ASCII: American Standard Code for Information Interchange. ASCII code is a set of 256 binary codes that represent the most commonly used letters, numbers, and symbols.

asynchronous: Lacking regular time relationship. As applied to computer communications, asynchronous refers to the method of transmitting data that does not require a steady stream of bits to be transmitted at regular time intervals.

B

backup: A copy of a file, usually on a removable disk, kept in case the original file is lost or damaged.

binary: The base two number system composed of zeros and ones (off or on), used by most digital computers. The right-most digit of a binary number has a value of 1, the next a value of 2, then 4, 8, 16, and so on. For example, the binary number 101 has a value of 5. *See also* ASCII.

BIOS: Basic Input/Output System. The firmware that controls data flow within the computer. *See also* firmware.

bit: Derived from "binary digit," the basic unit of information used by the computer. It is either zero or one. Eight bits is one byte. *See also* byte.

- Bluetooth:** A short-range radio technology designed to simplify wireless communication among computers, communication devices and the Internet.
- board:** A circuit board. An internal card containing electronic components, called chips, which perform a specific function or increase the capabilities of the system.
- boot:** Short for bootstrap. A program that starts or restarts the computer. The program reads instructions from a storage device into the computer's memory.
- boot disk:** See system disk.
- bootable disk:** See system disk.
- bps:** Bits per second. Typically used to describe the data transmission speed of a modem.
- buffer:** The portion of the computer's memory where data is temporarily stored. Buffers often compensate for differences in the rate of flow from one device to another.
- bus:** An interface for transmission of signals, data or electric power.
- byte:** The representation of a single character. A sequence of eight bits treated as a single unit; also the smallest addressable unit within the system.

C

- cache memory:** A section of very fast memory in which frequently used information is duplicated for quick access. Accessing data from cache is faster than accessing it from the computer's main memory. See also L1 cache, L2 cache.
- capacity:** The amount of data that can be stored on a magnetic storage device such as a floppy diskette or hard disk drive. It is usually described in terms of kilobytes (KB), where one KB = 1024 bytes, megabytes (MB), where one MB = 1024 KB and gigabytes (GB), where one GB = 1024 MB.
- CardBus:** An industry standard bus for 32-bit PC Cards.
- CD:** An individual compact disc. See also CD-ROM.
- CD-R:** A Compact Disc-Recordable disc can be written once and read many times. See also CD-ROM.
- CD-ROM:** A Compact Disc Read-Only Memory is a high capacity disc that can be read from but not written to. The CD-ROM drive uses a laser, rather than magnetic heads, to read data from the disc.
- CD-RW:** A Compact Disc-ReWritable disc can be rewritten many times. See also CD-ROM.
- character:** Any letter, number, punctuation mark, or symbol used by the computer. Also synonymous with byte.
- chassis:** The frame containing the computer.

- chip:** A small semiconductor containing computer logic and circuitry for processing, memory, input/output functions and controlling other chips.
- click:** To press and release the pointing device's primary button without moving the pointing device. In the Windows operating system, this refers to the pointing device's left button, unless otherwise stated. See also double-click.
- CMOS:** Complementary Metal-Oxide Semiconductor. An electronic circuit fabricated on a silicon wafer that requires very little power. Integrated circuits implemented in CMOS technology can be tightly packaged and are highly reliable.
- cold start:** Starting a computer that is currently off (turning on the power).
- COM1, COM2, COM3 and COM4:** The names assigned to the serial and communication ports.
- commands:** Instructions you enter at the terminal keyboard that direct the actions of the computer or its peripheral devices.
- compatibility:** 1) The ability of one computer to accept and process data in the same manner as another computer without modifying the data or the media upon which it is being transferred.
2) the ability of one device to connect to or communicate with another system or component.
- components:** Elements or parts (of a system) which make up the whole (system).
- computer program:** A set of instructions written for a computer that enable it to achieve a desired result.
- computer system:** A combination of hardware, software, firmware, and peripheral components assembled to process data into useful information.
- configuration:** The specific components in your system (such as the terminal, printer, and disk drives) and the settings that define how your system works. You use the HW Setup program to control your system configuration.
- controller:** Built-in hardware and software that controls the functions of a specific internal or peripheral device (e.g. keyboard controller).
- CPU:** Central Processing Unit. The portion of the computer that interprets and executes instructions.
- CRT:** Cathode Ray Tube. A vacuum tube in which beams projected on a fluorescent screen-producing luminous spots. An example is the television set.
- cursor:** A small, blinking rectangle or line that indicates the current position on the display screen.

D

- data:** Information that is factual, measurable or statistical that a computer can process, store, or retrieve.
- data bits:** A data communications parameter controlling the number of bits (binary digits) used to make up a byte. If data bits = 7 the computer can generate 128 unique characters. If data bits = 8 the computer can generate 256 unique characters.
- DC:** Direct Current. Electric current that flows in one direction. This type of power is usually supplied by batteries.
- default:** The parameter value automatically selected by the system when you or the program do not provide instructions. Also called a preset value.
- delete:** To remove data from a disk or other data storage device. Synonymous with erase.
- device driver:** A program (called a “driver”) that permits a computer to communicate with a device.
- dialog box:** A window that accepts user input to make system settings or record other information.
- disable:** To turn a computer option off. See also enable.
- disk drive:** The device that randomly accesses information on a disk and copies it to the computer’s memory. It also writes data from memory to the disk. To accomplish these tasks, the unit physically rotates the disk at high speed past a read-write head.
- disk storage:** Storing data on magnetic disk. Data is arranged on concentric tracks much like a phonograph record.
- display:** A CRT, LCD, or other image producing device used to view computer output.
- documentation:** The set of manuals and/or other instructions written for the users of a computer system or application. Computer system documentation typically includes procedural and tutorial information as well as system functions.
- double click:** To press and release the pointing device’s primary button rapidly twice without moving the pointing device. In the Windows operating system, this refers to the pointing device’s left button, unless otherwise stated.
- driver:** A software program, generally part of the operating system, that controls a specific piece of hardware (frequently a peripheral device such as a printer or mouse).
- DVD:** An individual digital versatile (or video) disc. See also DVD-ROM.
- DVD-R (+R, -R):** A Digital Versatile Disc-Recordable disk can be written once and read many times. The DVD-R drive uses a laser to read data from the disc.

DVD-RAM: A Digital Versatile Disc-Random Access Memory is a high-capacity, high performance disc that lets you store large volumes of data. The DVD-ROM drive uses a laser to read data from the disc.

DVD-ROM: A Digital Versatile Disc-Read Only Memory is a high capacity, high performance disc suitable for play back of video and other high-density files. The DVD-ROM drive uses a laser to read data from the disc.

DVD-RW (+RW, -RW): A Digital Versatile Disc-ReWritable disc can be rewritten many times.

E

echo: To send back a reflection of the transmitted data to the sending device. You can display the information on the screen, or output it to the printer, or both. When a computer receives back data it transmitted to a CRT (or other peripheral device) and then transmits the data to printer, the printer is said to echo the CRT.

enable: To turn on a computer option. See also disable.

erase: See delete.

escape: 1) A code (ASCII code 27), signaling the computer that what follows are commands; used with peripheral devices such as printers and modems.
2) A means of aborting the task currently in progress.

escape guard time: A time before and after an escape code is sent to the modem which distinguishes between escapes that are part of the transmitted data, and escapes that are intended as a command to the modem.

execute: To interpret and execute an instruction.

F

fast infrared: An industry standard that enables cableless infrared serial data transfer at speeds of up to 4 Mbps.

file: A collection of related information; a file can contain data, programs, or both.

fingerprint sensor: The fingerprint sensor compares and analyzes the unique characteristics in a fingerprint.

firmware: A set of instructions built into the hardware which controls and directs a microprocessor's activities.

flash memory: Non-volatile memory that can be written to as well as read. Information in flash memory remains whether or not the computer is receiving power. This type of memory is used to retain your fingerprint data. See also memory. Compare RAM and ROM.

floppy diskette: A removable disk that stores magnetically encoded data.

floppy diskette drive (FDD): An electromechanical device that reads and writes to floppy diskettes.

folder: An icon in Windows used to store documents or other folders.

format: The process of readying a blank disk for its first use. Formatting establishes the structure of the disk that the operating system expects before it writes files or programs onto the disk.

function keys: The keys labeled **F1** through **F12** that tell the computer to perform certain functions.

G

gigabyte (GB): A unit of data storage equal to 1024 megabytes. *See also* megabyte.

graphics: Drawings, pictures, or other images, such as charts or graphs, to present information.

H

hard disk: A storage device composed of a rigid platter or platters that can be magnetically coded with data. Hard disks hold much more information than diskettes and are used for long-term storage of programs and data. The primary (or only) hard disk in a computer is usually fixed, but some computers have secondary hard disks that are removable. By default, the hard disk is referred to as drive C.

hard disk drive (HDD): An electromechanical device that reads and writes a hard disk. *See also* hard disk.

hardware: The physical electronic and mechanical components of a computer system: typically, the computer itself, external disk drives, etc. *See also* software and firmware.

hertz: A unit of wave frequency that equals one cycle per second.

host computer: The computer that controls, regulates, and transmits information to a device or another computer.

hot key: The computer's feature in which certain keys in combination with the extended function key, **FN**, can be used to set system parameters, such as speaker volume.

HW Setup: A TOSHIBA utility that lets you set the parameters for various hardware components.

I

icon: A small graphic image displayed on the screen or in the indicator panel. In Windows, an icon represents an object that the user can manipulate.

i.LINK (IEEE1394): This port enables high-speed data transfer directly from external devices such as digital video cameras.

input: The data or instructions you provide to a computer, communication device or other peripheral device from the keyboard or external or internal storage devices. The data sent (or output) by the sending computer is input for the receiving computer.

instruction: Statements or commands that specify how to perform a particular task.

interface: 1) Hardware and/or software components of a system used specifically to connect one system or device to another.
2) To physically connect one system or device to another to exchange information.
3) The point of contact between user, the computer, and the program, for example, the keyboard or a menu.

interrupt request: A signal that gives a component access to the processor.

I/O: Input/output. Refers to acceptance and transfer of data to and from a computer.

I/O devices: Equipment used to communicate with the computer and transfer data to and from it.

K

K: Taken from the Greek word kilo, meaning 1000; often used as equivalent to 1024, or 2 raised to the 10th power. *See also* byte and kilobyte.

keyboard: An input device containing switches that are activated by manually pressing marked keys. Each keystroke activates a switch that transmits a specific code to the computer. For each key, the transmitted code is, in turn, representative of the (ASCII) character marked on the key.

kilobyte (KB): A unit of data storage equal to 1024 bytes. *See also* byte and megabyte.

L

L1 cache: Level one cache. Memory cache built into the processor to help improve processing speed. *See also* cache memory, L2 cache.

L2 cache: Memory cache installed on the motherboard to help improve processing speed. It is slower than L1 cache and faster than main memory. *See also* cache memory, L1 cache.

LAN: A group of computers or other devices dispersed over a relatively limited area and connected by a communications link that enables any device to interact with any other on the network.

Light Emitting Diode (LED): A semiconductor device that emits light when a current is applied.

Liquid Crystal Display (LCD): Liquid crystal sealed between two sheets of glass coated with transparent conducting material. The viewing-side coating is etched into character forming segments with leads that extend to the edge of the glass. Applying a voltage between the glass sheets alters the brightness of the liquid crystal.

M

main board: See motherboard.

megabyte (MB): A unit of data storage equal to 1024 kilobytes. See also kilobyte.

megahertz: A unit of wave frequency that equals 1 million cycles per second. See also hertz.

memory: Typically refers to the computer's main memory, where programs are run and data is temporarily stored and processed. Memory can be volatile and hold data temporarily, such as RAM, or it can be nonvolatile and hold data permanently, such as ROM. A computer's main memory is RAM. See RAM, ROM.

menu: A software interface that displays a list of options on the screen. Also called a screen.

microprocessor: A hardware component contained in a single integrated circuit that carries out instructions. Also called the central processing unit (CPU), one of the main parts of the computer.

mode: A method of operation, for example, the Shut Down Mode, Sleep Mode or the Hibernation Mode.

modem: Derived from modulator/demodulator, a device that converts (modulates) digital data for transmission over telephone lines and then converts modulated data (demodulates) to digital format where received.

monitor: A device that uses rows and columns of pixels to display alphanumeric characters or graphic images. See also CRT.

motherboard: A name sometimes used to refer to the main printed circuit board in processing equipment. It usually contains integrated circuits that perform the processor's basic functions and provides connectors for adding other boards that perform special functions.

MP3: An audio compression standard that enables high-quality transmission and real-time playback of sound files.

N

network: A collection of computers and associated devices that are connected by communications facilities. A network allows you to share data and peripheral devices, such as printers, with other users and to exchange electronic mail.

non-system disk: A disk for storing programs and data that cannot be used to start the computer. Compare system disk.

nonvolatile memory: Memory that is capable of permanently storing information. Turning the computer's power off does not alter data stored in nonvolatile memory.

numeric keypad overlay: A feature that allows you to use certain keys on the keyboard to perform numeric entry, or to control cursor and page movement.

O

OCR: Optical Character Recognition (reader). A technique or device that uses laser or visible light to identify characters and input them into a storage device.

online state: A functional state of a peripheral device when it is ready to receive or transmit data.

operating system: A group of programs that controls the basic operation of a computer. Operating system functions include interpreting programs, creating data files, and controlling the transmission and receipt (input/output) of data to and from memory and peripheral device.

output: The results of a computer operation. Output commonly indicates data.

1) printed on paper, 2) displayed at a terminal, 3) sent through the serial port of internal modem, or 4) stored on some magnetic media.

P

parallel: Processes that occur simultaneously. In communications, it means the transmission of more than one bit of information at a time. On your computer, the parallel port provides a parallel communications interface between the computer and an appropriate device. Compare serial.

parity: 1) The symmetrical relationship between two parameter values (integers) both of which are either on or off; odd or even; 0 or 1. 2) In serial communications, an error detection bit that is added to a group of data bits making the sum of the bits even or odd. Parity can be set to none, odd, or even.

password: A unique string of characters used to identify a specific user. The computer provides various levels of password protection such as user and supervisor.

PC card: A credit-card-sized expansion card designed to increase the capabilities of notebook computers. PC Cards provide functions such as modem, fax/modem, hard disk drive, network adapter, sound card, or SCSI adapter.

PCI: Peripheral Component Interconnect. An industry standard 32-bit bus.

- peripheral:** Any device, such as a printer or joystick, that is attached to the computer and controlled by the computer's CPU.
- pixel:** A picture element. The smallest dot that can be made on a display or printer. Also called a pel.
- plug and play:** A capability with Windows that enables the system to automatically recognize connections of external devices and make the necessary configurations in the computer.
- pointing device:** Any device, such as the Touch Pad or a mouse, that enables you to move the cursor on the screen.
- port:** The electrical connection through which the computer sends and receives data to and from devices or other computers.
- Power Saver:** A TOSHIBA utility that lets you set the parameters for various power-saving functions.
- program:** A set of instructions a computer can execute that enables it to achieve a desired result. *See also* application.
- prompt:** A message the computer provides indicating it is ready for or requires information or an action from you.

R

- Radio frequency interference (RFI) shield:** A metal shield enclosing the printed circuit boards of the printer or computer to prevent radio and TV interference. All computer equipment generates radio frequency signals. The FCC regulates the amount of signals a computing device can allow past its shielding. A Class A device is sufficient for office use. Class B provides a more stringent classification for home equipment use. TOSHIBA portable computers comply with Class B computing device regulations.
- Random Access Memory (RAM):** Volatile memory that can be written to as well as read. Volatile here means that information in RAM is lost when you turn off your computer. This type of memory is used for your computer's main memory. *See also* memory. Compare ROM.
- resolution:** A measure of the sharpness of the images that can be produced by a printer or displayed on a screen. For a printer, resolution is expressed in dots per inch (dpi). For a screen, it is expressed as the number of pixels available horizontally and vertically.
- restart:** Resetting a computer without turning it off (also called "warm boot", "soft reset" or "reboot"). *See also* boot.
- RGB:** Red, green, and blue. A device that uses three input signals, each activating an electron gun for a primary additive color (red, green, and blue) or port for using such a device. *See also* CRT.
- RJ45:** A modular LAN jack.

Read Only Memory (ROM): Non-volatile memory that can be read but not written to. Non-volatile here means that information in ROM remains whether or not the computer is receiving power. This type of memory is used to store your computer's BIOS, which is essential instructions the computer reads when you start it up. See also BIOS, memory. Compare RAM.

S

S/P DIF: A standard of digital interface for audio.

SCSI: Small Computer System Interface is an industry standard interface for connection of a variety of peripheral devices.

SD/SDHC/SDXC Card: Secure Digital cards are flash memory widely used in a variety of digital devices such as digital cameras and Personal Digital Assistants.

serial: Processes that occur one at a time. In communications, it means the transmission of one bit at a time sequentially over a single channel. On your computer, the serial port provides a serial interface between the computer and an appropriate device. Compare parallel.

SIO: Serial Input/Output. The electronic methodology used in serial data transmission.

soft key: Key combinations that emulate keys on the IBM keyboard, change some configuration options, stop program execution, and access the numeric keypad overlay.

software: The set of programs, procedures and related documentation associated with a computer system. Specifically refers to computer programs that direct and control the computer system's activities. See *also* hardware.

stop bit: One or more bits of a byte that follow the transmitted character or group codes in asynchronous serial communications.

synchronous: Having a constant time interval between successive bits, characters or events.

system disk: A diskette that contains the operating system files needed to start the computer. Any diskette can be formatted as a system disk. A system disk is also called a "bootable disk", "boot disk" or a "startup disk." Compare non-system disk.

T

terminal: A typewriter-like keyboard and CRT display screen connected to the computer for data input/output.

TFT display: A liquid crystal display (LCD) made from an array of liquid crystal cells using active-matrix technology with thin film transistor (TFT) to drive each cell.

Touch Pad: A pointing device integrated into the TOSHIBA computer palm rest.

U

USB: Universal Serial Bus. This serial interface lets you communicate with several devices connected in a chain to a single port on the computer.

V

VGA: Video Graphics Array is an industry standard video adaptor that lets you run any popular software.

volatile memory: Random access memory (RAM) that stores information as long as power is supplied to the computer.

W

warm start: Restarting or resetting a computer without turning it off.

Wi-Fi: A registered trademark term of the Wi-Fi Alliance that stands for Wireless Fidelity, and is another term for the communication protocol to permit an Ethernet connection using wireless communication components.

window: A portion of the screen that can display its own application, document or dialog box. Often used to mean a Microsoft Windows window.

Wireless LAN: Local Area Network (LAN) through wireless communication.

Wireless WAN: Wide Area Network (WAN) through wireless communication.

write protection: A method for protecting a floppy diskette from accidental erasure.
