Contents

Chapter 1. About this manual 1

Important Safety Information	1
Strategy for Replacing FRUs for CTO, CMV, and GAV products	2
Product definition	2
FRU Identification for CTO, CMV, and GAV products	3

Chapter 2. General information 5

Access IBM	5
Additional information resources	5
Features	5
Specifications	9

Chapter 3. General Checkout 11

Chapter 4. IBM Enhanced Diagnostics 13

Diagnostics program download	13
Running IBM Enhanced Diagnostics from the Access IBM Predesktop Area	13
Navigating through the diagnostics programs	13
Running diagnostics tests	13
Test selection	14
Test results	14
Fixed disk advanced test (FDAT)	15
Quick and Full erase - hard drive	16
Viewing the test log	17

Chapter 5. Using the IBM Setup Utility 19

Starting the IBM Setup Utility program	19
Viewing and changing settings	19
Exiting from the IBM Setup Utility program	19
Using passwords	19
User password	19
Administrator password	20
Setting, changing, and deleting a password	20
Security settings for Access IBM Predesktop Area	20
Using Security Profile by Device	21
Using IDE Drives Setup	21
Selecting a startup device	22
Selecting a temporary startup device	22
Changing the startup device sequence	22
Advanced settings	22

Chapter 6. Replacing FRUs 23

Locating controls and connectors on the front of the computer	23
Locating connectors on the rear of the computer	24
Opening the cover	25
Locating components	26
Accessing system board components and drives	27
Identifying parts on the system board	28
Replacing memory	29
Replacing a PCI adapter	30

Replacing the battery	31
Replacing the power supply	32
Replacing the system board, microprocessor, and heat sink	34
Replacing the microprocessor	38
Replacing internal drives	38
Replacing a CD-ROM, CD-RW, or DVD optical drive	40
Replacing the hard disk drive	40
Connecting a serial ATA hard disk drive	41
Replacing the diskette drive	42
Connecting an IDE hard disk or CD drive	42
Replacing the speaker	43
Replacing the power button and LED assembly	43
Replacing the fan assembly	44
Closing the cover and connecting the cables	46

Chapter 7. Symptom-to-FRU Index 47

Hard disk drive boot error	47
Power Supply Errors	47
Diagnostic error codes	49
Beep symptoms	70
No-beep symptoms	72
POST error codes	73
Miscellaneous error messages	87

Chapter 1. About this manual

This manual contains service and reference information for IBM® computer Types 8127, 8183, 8184, 8320, 8416, 8417, 8418, 8419 and 8429.

This manual is divided into product service sections and a related service section, as follows:

- The product service sections include procedures for isolating problems to a FRU, a Symptom-to-FRU Index, additional service information and an illustrated parts catalog.
- The related service section includes safety notices and safety information, and problem determination tips.

Note:

This manual is intended for trained servicers who are familiar with IBM Personal Computer products. Use this manual along with advanced diagnostic tests to troubleshoot problems effectively.

Before servicing an IBM product, be sure to review the "Safety information" on page 153.

Important Safety Information

Be sure to read all caution and danger statements in this book before performing any of the instructions.

Prenez connaissance de toutes les consignes de type Attention et Danger avant de procéder aux opérations décrites par les instructions.

Lesen Sie alle Sicherheitshinweise, bevor Sie eine Anweisung ausführen.

주의 및 위험 경고문(한글)

중요:

이 책에 나오는 모든 주의 및 위험 경고문은 번호로 시작됩니다. 이 번호는 *Safety Information* 책에 나오는 영문판 주의 및 위험 경고문과 한글판 주의 및 위험 경고문을 상호 참조하는데 사용됩니다.

예를 들어 주의 경고문이 번호 1로 시작되면 *Safety Information* 책에서 이 주의 경고문은 경고문 1번 아래에 나옵니다.

지시를 따라 수행하기 전에 먼저 모든 주의 및 위험 경고문을 읽도록 하십시오.

Accertarsi di leggere tutti gli avvisi di attenzione e di pericolo prima di effettuare qualsiasi operazione.

Leia todas as instruções de cuidado e perigo antes de executar qualquer operação.

Lea atentamente todas las declaraciones de precaución y peligro ante de llevar a cabo cualquier operación.

注意和危險声明 (简体中文)

重要事項：

本书中的所有注意和危險声明之前都有编号。该编号用于英语的注意或危險声明与 *Safety Information* 一书中可以找到的翻译版本的注意或危險声明进行交叉引用。

例如，如果一个注意声明以编号 1 开始，那么对该注意声明的翻译出现在 *Safety Information* 一书中的声明 1 中。

在按说明执行任何操作前，请务必阅读所有注意和危險声明。

注意及危險聲明 (中文)

重要資訊：

本書中所有「注意」及「危險」的聲明均以數字開始。此一數字是用來作為交互參考之用，英文「注意」或「危險」聲明可在「安全資訊」(Safety Information) 一書中找到相同內容的「注意」或「危險」聲明的譯文。

例如，有一「危險」聲明以數字 1 開始，則該「危險」聲明的譯文將出現在「安全資訊」(Safety Information) 一書的「聲明」1 中。

執行任何指示之前，請詳讀所有「注意」及「危險」的聲明。

Strategy for Replacing FRUs for CTO, CMV, and GAV products

Product definition

Dynamic Configure To Order (CTO)

This provides the ability for a customer to configure an IBM solution from an eSite, and have this configuration sent to fulfillment, where it is built and shipped directly to the customer. The machine label, PC Entitlement Warehouse (PEW), eSupport, and the HMM will load these products as the 4-digit MT and 3-digit model, where model = 'CTO' (Example: 1829-CTO).

Custom Model Variant (CMV)

This is a unique configuration that has been negotiated between IBM and the customer. A unique 4-digit MT and 3-digit model is provided to the customer to place orders (Example: 1829-W15). A CMV is a special bid offering. Therefore, it is NOT generally announced.

- The MTM portion of the machine label is the 4-digit MT and 3-digit model, where model = 'CTO' (Example: 1829-CTO). The PRODUCT ID portion of the machine label is the 4-digit MT and 3-digit CMV model (Example: 1829-W15).
- The PEW record is the 4-digit MT and 3-digit model, where model = 'CTO' (Example: 1829-CTO).
- eSupport will show both the CTO and CMV machine type models (Example: 1829-CTO and 1829-W15 will be found on the eSupport site.)
- The HMM will have the 4-digit MT and 3-digit CTO model only (Example: 1829-CTO). Again, CMVs are custom models and are not found in the HMM.

General Announce Variant (GAV)

This is a standard model (fixed configuration). GAVs are announced and offered to all customers. The MTM portion of the machine label is a 4-digit MT and 3-digit model, where model = a "fixed model number", not 'CTO' (Example: 1829-F1U). Also, PEW, eSupport, and the HMM will list these products under the same fixed model number.

FRU Identification for CTO, CMV, and GAV products

There are three information resources to identify which FRUs are used to support CTO, CMV, and GAV products. These sources are PEW, eSupport, and the HMM.

Using PEW

- **PEW** is the primary source for identifying FRU part numbers and FRU descriptions for the key commodities for CTO, CMV and GAV products at a MT - serial number level. An example of key commodities are hard disk drives, system boards, microprocessors, Liquid Crystal Displays (LCDs), and memory.
- Remember, All CTO and CMV products are loaded in PEW under the 4-digit MT and 3-digit model, where model = 'CTO' (Example: 1829-CTO). GAVs are loaded in PEW under the 4-digit MT and 3-digit model, where model = a "fixed model number", not 'CTO' (Example: 1829-F1U).
- PEW can be accessed at the following Web site:
<http://w3-3.ibm.com/pc/entitle>
Click on MACHINE LOOKUP, followed by WARRANTY INFORMATION. Input the MT and Serial number and the list of key commodities will be returned in the PEW record under COMPONENT INFORMATION.
- **Business Partners** using Eclaim will access PEW when performing Entitlement Lookup. Business Partners will enter Loc ID, MT and Serial, and the key commodities will be returned in the Eclaim record under SYSTEM DETAILS.
- Authorized IBM Business Partners can access Eclaim at the following Web site:
<http://wca.eclaim.com>

Using eSupport

For Key Commodities (Examples - hard disk drive, system board, microprocessor, LCD, and memory)

- eSupport can be used to view the list of key commodities built in a particular machine serial (this is the same record found in PEW).
- eSupport can be accessed at the following Web site:
<http://www.ibm.com/pc/support>
- To view the key commodities, click on PARTS INFORMATION, then PARTS LOOKUP. Type in the model type and serial number. The key commodities will be returned in the eSupport record under PARTS SHIPPED WITH YOUR SYSTEM.

For the Remaining FRUs (the complete list of FRUs at the MT Model level)

- eSupport can be used to view the complete list of FRUs for a machine type and model.
- To view the complete list of FRUs, type in the machine type and model (Example: 1829-CTO) under QUICK PATH. Under 'View by Document Type' select PARTS INFORMATION. Under 'Filter by Category' select SERVICE PARTS. Under 'Parts Information by Date' select SYSTEM SERVICE PARTS. The list of service parts by description, with applicable machine type model and FRU will be displayed.

Using the HMM

- Use the HMM as a back-up to PEW and eSupport to view the complete list of FRUs at the MT Model level.

Chapter 2. General information

Access IBM

To find more information about the features on the computer you can use the Access IBM Predesktop Area. To open the Access IBM Predesktop Area, use the following procedure:

1. Shut down the operating system and turn off the computer.
2. Turn on the computer and look for the following prompt on the logo screen:
(To interrupt normal startup, press Enter)

Press Enter when you see the prompt.

3. The Access IBM Predesktop Area opens.

Additional information resources

If you have Internet access, the most up-to-date information for your computer is available from the World Wide Web.

You can find the following information:

- CRU removal and installation instructions
- Publications
- Troubleshooting information
- Parts information
- Downloads and drivers
- Links to other useful sources of information

To access this information, point your browser to:

<http://www.ibm.com/pc/support/site.wss/document.do?Lndocid=part-video>

Features

This section provides an overview of the computer features and preinstalled software.

Microprocessor

- Intel® Celeron™ (some models)
- Intel Pentium® 4 (some models)
- Intel Pentium 4 with HyperThreading (some models)
- Internal cache (size varies by model type)

Memory

Support for two 184-pin dual inline memory modules (DIMMs). Each DIMM socket can support up to 1 GB of PC2700 double data rate (DDR) dynamic random access memory (SDRAM) for a system maximum of 2 GB.

Internal drives

- 3.5-inch, half-inch (slim) diskette drive (some models)
- Hard disk drive
- Optical drives such as CD-ROM, DVD-ROM, DVD-ROM/CD-RW Combo, CD-RW, or IBM Multi-Burner (some models)

Video subsystem

An integrated Intel Extreme Graphics 2 controller for a Video Graphics Array (VGA) monitor

Audio subsystem

The integrated AC'97 audio controller provides four audio connectors.

- Microphone and headphone connectors on the front panel
- Line-in and line-out connectors on the rear panel

Connectivity

- 10/100 Mbps integrated Intel Ethernet controller that supports the Wake on LAN[®] feature (some models)
- 10/100/1000 Mbps integrated Intel Ethernet controller that supports the Wake on LAN feature (some models)
- Peripheral Component Interconnect (PCI) V.90 Data/Fax modem (some models)

System management features

- Remote Program Load (RPL) and Dynamic Host Configuration Protocol (DHCP)
- Wake on LAN
- Wake on Ring (in the IBM Setup Utility program, this feature is called Serial Port Ring Detect for an external modem and Modem Ring Detect for an internal PCI modem)
- Remote Administration
- Automatic power-on startup
- System Management (SM) BIOS and SM software
- Ability to store POST hardware test results

Input/output features

- 25-pin, Extended Capabilities Port (ECP)/Extended Parallel Port (EPP)
- Two 9-pin serial connectors
- Eight USB 2.0 connectors (two on front panel and six on rear panel)
- PS/2[®] mouse connector
- PS/2 keyboard connector
- Ethernet connector
- VGA monitor connector
- Two audio connectors (line-in and line-out) on rear panel
- Two audio connectors (microphone and headphone) on front panel

Expansion

- Two 32-bit PCI full height adapter slots
- Two DIMM memory connectors

Power

- 200 Watt power supply with manual voltage selection switch
- Automatic 50/60 Hz input frequency switching
- Advanced Power Management support
- Advanced Configuration and Power Interface (ACPI) support

Security features

- User and administrator passwords
- Support for the addition of a cable lock such as a Kensington lock
- Knockout holes for installing a rope clip (U-bolt)
- Optional keylock on top cover
- Startup sequence control
- Startup without diskette drive, keyboard, or mouse
- Diskette and hard disk I/O control
- Serial and parallel port I/O control
- Security profile by device

IBM preinstalled software

The computer comes with preinstalled software. An operating system, device drivers to support built-in features, and other support programs are included.

Operating systems (preinstalled) (varies by model)

Note: Not all countries or regions will have these operating systems.

- Microsoft® Windows® XP Home
- Microsoft Windows XP Professional
- Microsoft Windows 2000

Specifications

This section lists certain specifications for the computer. For the latest specification information, see the *User Guide* for the computer go to:

<http://www.ibm.com/pc/support/>

<p>Dimensions</p> <p>Width: 12.2 inches (310 mm) Height: 3.35 inches (85 mm) Depth: 14.1 inches (358 mm)</p> <p>Weight</p> <p>Minimum configuration as shipped: 8.3 kg (18.4 lbs) With stand: 8.5 kg (18.8 lbs)</p> <p>Environment</p> <p>Air temperature:</p> <p>Operating at 0 - 3000 ft (914.4 m): 10° to 35°C (50° to 95°F) Operating at 3000 ft - 7000 ft (2134 m): 10° to 32°C (50° to 89.6°F) Non-operating: 10° to 43°C (50° to 110°F)</p> <p>Humidity:</p> <p>Operating: 8% to 80% Non-operating: 8% to 80% Transit: 8% to 90%</p> <p>Maximum altitude: 7000 ft (2133.6 m)</p> <p>Electrical input</p> <p>Input voltage:</p> <p>Low range:</p> <p>Minimum: 90 V ac Maximum: 137 V ac Input frequency range: 57–63 Hz Voltage switch setting: 115 V ac</p> <p>High range:</p> <p>Minimum: 180 V ac Maximum: 265 V ac Input frequency range: 47–53 Hz Voltage switch setting: 230 V ac</p> <p>Input kilovolt-amperes (kVA) (approximate):</p> <p>Minimum configuration as shipped: 0.09 kVA Maximum configuration: 0.23 kVA</p> <p>Heat output (approximate) in British thermal units (Btu) per hour:</p> <p>Minimum configuration: 205.8 Btu/hr (60 watts) Maximum configuration: 548.8 Btu/hr (160 watts)</p>	<p>Airflow for computers with a microprocessor that runs at or below 2.8 GHz</p> <p>Approximately 13 cubic feet (0.37 cubic meters) per minute</p> <p>Airflow for computers with a microprocessor that runs above 2.8 GHz</p> <p>Approximately 14 cubic feet (0.40 cubic meters) per minute</p> <p>Acoustical noise-emission values</p> <p>Note: In this computer, fan speed is controlled by temperature, configuration, and software. Actual noise-emission values might be different from the stated values depending on the number of fans and the speed of the fans.</p> <p>Average sound-pressure levels for computers with a microprocessor that runs at or below 2.8 GHz:</p> <p>At operator position - 0.5 meters:</p> <p>Idle: 30 dBA Operating: 34 dBA</p> <p>At bystander position - 1 meter (3.3 ft):</p> <p>Idle: 25 dBA Operating: 29 dBA</p> <p>Declared (upper limit) sound-power levels:</p> <p>Idle: 3.9 bels Operating: 4.3 bels</p> <p>Average sound-pressure levels for computers with a microprocessor that runs at or greater than 2.8 GHz:</p> <p>At operator position - 0.5 meters:</p> <p>Idle: 31 dBA Operating: 34 dBA</p> <p>At bystander position - 1 meter (3.3 ft):</p> <p>Idle: 26 dBA Operating: 29 dBA</p> <p>Declared (upper limit) sound-power levels:</p> <p>Idle: 4.0 bels Operating: 4.3 bels</p> <p>Note: These levels were measured in controlled acoustical environments according to the procedures specified by the American National Standards Institute (ANSI) S12.10 and ISO 7779 and are reported in accordance with ISO 9296. Actual sound-pressure levels in a given location might exceed the average values stated because of room reflections and other nearby noise sources. The declared sound-power levels indicate an upper limit, below which a large number of computers will operate.</p>
--	--

Chapter 3. General Checkout

This general checkout procedure is for Type 8127, 8183, 8184, 8320, 8416, 8417, 8418, 8419, and 8429 computers.

Attention

The drives in the computer you are servicing might have been rearranged or the drive startup sequence changed. Be extremely careful during write operations such as copying, saving or formatting. Data or programs can be overwritten if you select an incorrect drive.

Diagnostic error messages appear when a test program finds a problem with a hardware option. For the test programs to properly determine if a test *Passed*, *Failed* or *Aborted*, the test programs check the error-return code at test completion. See "Diagnostic error codes" on page 49.

General error messages appear if a problem or conflict is found by an application program, the operating system, or both. For an explanation of these messages, refer to the information supplied with that software package.

Notes:

- The default for this computer is to boot up quiet (no beep and no memory count and checkpoint code display) when no errors are detected by POST.
- To enable beep and memory count and checkpoint code display when a successful POST occurs, do the following:
 1. Select **Start Options** in the IBM Setup Utility program (see "Starting the IBM Setup Utility program" on page 19).
 2. Set **Power-On Self-Test** to **Enhanced**.
- Before replacing any FRUs, ensure that the latest level of BIOS is installed on the system. A down-level BIOS might cause false errors and unnecessary replacement of the system board. For more information on how to determine and obtain the latest level BIOS, see "BIOS levels" on page 147.
- If multiple error codes are displayed, diagnose the first error code displayed.
- If the computer hangs with a POST error, go to Chapter 7, "Symptom-to-FRU Index," on page 47.
- If the computer hangs and no error is displayed, go to "Undetermined problems" on page 89.
- If an installed device is not recognized by the diagnostics program, that device might be defective.

001

1. Power-off the computer and all external devices.
2. Check all cables and power cords.
3. Make sure the system board is seated properly.
4. Set all display controls to the middle position.
5. Power-on all external devices.
6. Power-on the computer.
7. Check for the following response:

- Readable instructions or the Main Menu.

DID YOU RECEIVE THE CORRECT RESPONSE?

If NO, continue to **002** .

If YES, proceed to **003** .

002

If the Power Management feature is enabled, do the following:

1. Start the IBM Setup Utility program (see “Starting the IBM Setup Utility program” on page 19)
2. Select **Power Management** from the IBM Setup Utility program menu.
3. Select **APM**.
4. Be sure **APM BIOS Mode** is set to **Disabled**. If it is not, press Left Arrow (←) or Right Arrow (→) to change the setting.
5. Select **Automatic Hardware Power Management**.
6. Set **Automatic Hardware Power Management** to **Disabled**.
7. If the problem persists, continue to **003** .

003

Run the Diagnostic programs. See Chapter 4, “IBM Enhanced Diagnostics,” on page 13.

- If you receive an error, replace the part that the diagnostic program calls out or go to “Diagnostic error codes” on page 49.
- If the test stops and you cannot continue, replace the last device tested.

Chapter 4. IBM Enhanced Diagnostics

The IBM Enhanced Diagnostics program uses a full range of diagnostic utilities to determine the operating condition of the computer's hardware components.

You can run the IBM Enhanced Diagnostics from the Access IBM Predesktop Area on your hard disk. Alternatively, you can create a bootable *IBM Enhanced Diagnostics* diskette from the Access IBM Predesktop Area.

You can also download the latest version of the Enhanced Diagnostics program from

<http://www.ibm.com/pc/support/>

on the World Wide Web. Type your machine type and model number into the **Quick Path** field to find the downloadable files that are specific to the computer.

Diagnostics program download

To download the Diagnostics program, do the following:

- Go to <http://www.ibm.com/>.
- Select **Support & downloads**.
- Select **Personal computing** from the "Get product support for" list.
- Enter your machine type in the "Quick Path" box and click **Go**.
- Follow the links provided to locate the IBM Enhanced Diagnostics.

Note: You can download either a diskette image or a startable CD-ROM image (.iso file) of the diagnostics.

Running IBM Enhanced Diagnostics from the Access IBM Predesktop Area

To open the Access IBM Predesktop Area, do the following:

1. With the computer off, press and hold the Enter key; then, turn on the computer.
2. When the logo screen appears, release the Enter key.
3. The Access IBM Predesktop Area opens.
4. Select **Run diagnostics** from the Utilities menu.
5. Follow the instructions on the screen.

Navigating through the diagnostics programs

Use the cursor movement keys to navigate within the menus.

- The **Enter** key is used to select a menu item.
- The **Esc** key is used to back up to the previous menu.
- For online help select **F1**.

Running diagnostics tests

There are four ways to run the diagnostic tests.

1. Using the cursor movement keys, highlight **Run Normal Test** or **Run Quick Test** from the Diagnostics menu and then press **Enter**.
This will automatically run a pre-defined group of tests from each test category. **Run Normal Test** runs a more extensive set of tests than does **Run Quick Test** and takes longer to execute.
2. Press **F5** to automatically run all selected tests in all categories. See “Test selection.”
3. From within a test category, press **Ctrl-Enter** to automatically run only the selected tests in that category. See “Test selection.”
4. Using the cursor movement keys, highlight a single test within a test category, then press **Enter**. This will run only that test.

Press **Esc** at any time to stop the testing process.

Test results, (N/A, PASSED, FAILED, ABORTED), are displayed in the field beside the test description and in the test log. See “Viewing the test log” on page 17.

Test selection

To select one or more tests, use the following procedure.

1. Open the corresponding test category.
2. Using the cursor movement keys, highlight the desired test.
3. Press the space bar.
A selected test is marked by >>. Pressing the space bar again de-selects a test and removes the chevron.
4. Repeat steps 2 and 3 above to select all desired tests.

Test results

Diagnostics test results will produce the following error code format:

Function Code	Failure Type	DeviceID	Date	ChkDigits	Text
---------------	--------------	----------	------	-----------	------

- **Function Code:**
Represents the feature or function within the PC.
- **Failure Type:**
Represents the type of error encountered.
- **DeviceID:**
Contains the component’s unit-ID which corresponds to either a fixed disk drive, removable media drive, serial or parallel port, processor, specific RIMM, or a device on the PCI bus.
- **Date:**
Contains the date on which the diagnostic test was run. The date is retrieved from CMOS and displayed using the YYYYMMDD format.
- **ChkDigits:**
Contains a 2-digit check-digit value to ensure the following:
 - Diagnostics were run on the specified date.
 - Diagnostics were run on the specified IBM computer.
 - The diagnostic error code is recorded correctly.
- **Text:**

Description of the error.

Note: See "Diagnostic error codes" on page 49 for error code listings.

Fixed disk advanced test (FDAT)

PC-Doctor's (PCDR) Fixed-Disk Advanced Test module (FDAT) is a full-featured highly configurable fixed-disk test suite. The configurable capabilities of FDAT allow users to enable or disable specific tests, enable or disable testing features, control the test log detail, alter testing parameters, etc. FDAT will test for and report most commonly found errors on a fixed-disk drive and is able to test up to 128 SCSI and 4 IDE drives (up to 132 total drives).

Drive information is gathered through FDAT's enumeration of available devices and user specific configuration parameters located in the FDAT.INI. FDAT uses information supplied by these features to indicate specifically what devices are available for test, what tests are available for the device, device properties, etc. Modify the FDAT.INI file in PC Doctor for DOS to change testing parameters.

FDAT consists of the following subtests and features.

Fixed-Disk Tests:

- *Seek Tests:* - checks the physical operation of the drive head.
 - Linear Seek
 - Random Seek
 - Min-Max Seek
 - Butterfly Seek
- *Verify Tests:* - checks the integrity of the data present on the media.
 - Linear Verify
 - Random Verify
- *Surface Scan Tests:* - checks the drive media for defects.
 - Surface Scan (Linear)
 - Surface Scan (Aggressive) - this is disabled for normal customer use.
 - Surface Scan (Random)
- *SMART:* - checks the SMART functionality for drives that support SMART.
 - Start SMART Self-Test
 - Get SMART test results

Other Test Features:

- *Write-Splice Repair* - detects and corrects Error Correction Code errors during Verify tests.
- *Auto Spin Down* - a gradual spin down of the drive platters to avoid damaging the media.
- *Manufacturer Log* - an in-depth manufacturer supported log of errors on the drive.

Multitasking:

To allow simultaneous testing of multiple hard drives whenever possible, the FDAT module is written as a set of multitasking functions. Each drive under test can run the same test or run a different test at the same time. Each subtest is written to handle a single test pass and all test variables are kept track of in a

structure unique for each drive. However, when testing IDE drives, FDAT will not perform simultaneous testing of IDE drives that are attached to the same IDE cable. For example, if FDAT is testing four IDE drives on a PC, it will perform simultaneous testing on drives 1 and 3 first (master drives), then perform tests on 2 and 4 (slave drives). FDAT will also perform simultaneous testing on a master and slave that are on separate IDE cables, but will not perform simultaneous tests on a master and slave on the same IDE cable. This generally increases the amount of time needed to test multiple IDE drives.

Another limitation of FDAT'S multitasking capability is the use of Ultra DMA (UDMA). Only one drive at a time can access the UDMA channel and the UDMA channel buffer must be kept high in order to maintain a speed advantage over other data transfer modes. In order to use the UDMA channel during testing, users must disable the multitasking feature.

Destructive vs non-destructive testing:

Most of the tests found in FDAT are non-destructive. This means that PCDR will preserve any data that is present on the tested media prior to beginning any destructive operations (i.e. write operations). However, users can run certain tests in destructive mode (i.e. surface scan tests). Destructive tests will speed up testing because FDAT does not preserve the data on the media prior to the test beginning. Unlike non-destructive tests, any data present on the media prior to the test beginning is lost.

FDAT allows for enabling or disabling destructive tests, as well as specifying a range of destructive and non-destructive sectors on the tested drive. This is done through the configuration of the FDAT.INI. If destructive and non-destructive ranges somehow overlap, then the overlapped area is considered non-destructive. For example, if users specify both destructive and non-destructive ranges as the same, then the entire drive is tested as non-destructive.

Quick and Full erase - hard drive

The Diagnostics program offers two hard drive format utilities:

- Quick Erase Hard Drive
- Full Erase Hard Drive

The Quick Erase Hard Drive provides a DOS utility that performs the following steps.

- Destroys the Master Boot Record (MBR) on the hard drive.
- Destroys all copies of the FAT Table on all partitions (both the master and backup).
- Destroys the partition table.
- Provides messages that warn the user that this is a non-recoverable process.

The Full Erase Hard Drive provides a DOS utility that performs the following steps.

- Performs all the steps in Quick Erase.
- Provides a DOS utility that writes random data to all sectors of the hard drive.
- Provide an estimate of time to completion along with a visual representation of completion status.
- Provides messages that warn the user about non-recoverable process.

Important: Make sure that all data is backed up before using the Quick or Full Erase functions.
--

To select the Quick Erase or Full Erase Hard Drive utility, use the following procedure.

1. Select the UTILITY option on the toolbar and press **Enter**.
2. Select either the QUICK ERASE or FULL ERASE HARD DISK option and follow the instructions.

Viewing the test log

Errors reported by the diagnostic test will be displayed by the program as a failed test.

To view details of a failure or to view a list of test results, use the following procedure from any test category screen.

- Press **F3** to activate the log file.
- Press **F3** again to save the file to diskette or **F2** to print the file.

Chapter 5. Using the IBM Setup Utility

The IBM Setup Utility program is stored in the electrically erasable programmable read-only memory (EEPROM) of the computer. The IBM Setup Utility program is used to view and change the configuration settings of the computer, regardless of which operating system you are using. However, the operating-system settings might override any similar settings in the IBM Setup Utility program.

Starting the IBM Setup Utility program

To start the IBM Setup Utility program, do the following:

1. Shut down the operating system and turn off the computer.
2. Turn on the computer and look for the following prompt on the logo screen:
(To interrupt normal startup, press Enter)

Press Enter when you see the prompt.

3. When the Access IBM Predesktop Area displays, double click **Start setup utility**.

Note: If an administrator password has been set, the IBM Setup Utility program menu is not display until you type your password.

The IBM Setup Utility might start automatically when POST detects that hardware has been removed or new hardware has been installed in the computer.

Viewing and changing settings

The IBM Setup Utility program menu lists items that identify system configuration topics.

When working with the IBM Setup Utility program menu, you must use the keyboard. The keys used to perform various tasks are displayed at the bottom of each screen.

Exiting from the IBM Setup Utility program

When you finish viewing or changing settings, press Esc to return to the IBM Setup Utility program menu (you might have to press Esc several times). If you want to save the new settings, select **Save Settings** or **Save and exit the Setup Utility**. Otherwise, your changes will not be saved.

Using passwords

You can use passwords to provide security for the computer and data. There are two kinds of passwords: a user password and an administrator password. You do not have to set a password of either type to use the computer. However, if you decide to set either one, read the following sections.

User password

The user password feature deters unauthorized persons from gaining access to the computer.

Administrator password

Setting an administrator password deters unauthorized persons from changing configuration settings. If you are responsible for maintaining the settings of several computers, you might want to set an administrator password.

After you set an administrator password, a password prompt is displayed each time you try to access the IBM Setup Utility program. If you type the wrong password, you will see an error message. If you type the wrong password three times, you must turn the computer off and start again.

If both the user and administrator passwords are set, you can type either password. However, to change any configuration settings, you must use your administrator password.

Setting, changing, and deleting a password

To set, change, or delete a password, do the following:

Note: A password can be any combination of up to seven characters (A- Z, a-z, and 0-9).

1. Start the IBM Setup Utility program (see “Starting the IBM Setup Utility program” on page 19).
2. From the IBM Setup Utility program menu, select **Security** → **Set Passwords**. Read the information displayed on the right side of the screen.

Security settings for Access IBM Predesktop Area

The security settings in the IBM Setup Utility allow you to select the level of security that you require for the Access IBM Predesktop Area. These settings are described below:

Secure

This setting does not allow any user or software initiated changes.

Normal

This setting allows the user to make changes but the contents are hidden from the operating system.

Disabled

This setting provides the lowest level of security. The area can be changed by the user or the operating system.

To set the security level for the Access IBM Predesktop Area, do the following:

1. Start the IBM Setup Utility program (see “Starting the IBM Setup Utility program” on page 19).
2. From the IBM Setup Utility program menu, select **Security**.
3. Select **Access IBM Predesktop Area**.
4. Select the desired setting and press Enter.
5. Return to the IBM Setup Utility program menu and select **Exit** and then **Save Settings** or **Save and exit the Setup Utility**.

Note: If you do not want to save the settings, select **Exit the Setup Utility without saving**.

Using Security Profile by Device

Security Profile by Device is used to enable or disable user access to the following devices:

IDE controller	When this feature is set to Disable , all devices connected to the IDE controller (such as hard disk drives or the CD-ROM drive) are disabled and will not be displayed in the system configuration.
Diskette Drive Access	When this feature is set to Disable , the diskette drive cannot be accessed.
Diskette Write Protect	When this feature is set to Enable , all diskettes are treated as if they are write-protected.

To set Security Profile by Device, do the following:

1. Start the IBM Setup Utility program (see “Starting the IBM Setup Utility program” on page 19).
2. From the IBM Setup Utility program menu, select **Security**.
3. Select **Security Profile by Device**.
4. Select the desired devices and settings and press Enter.
5. Return to the IBM Setup Utility program menu and select **Exit** and then **Save Settings** or **Save and exit the Setup Utility**.

Note: If you do not want to save the settings, select **Exit the Setup Utility without saving**.

Using IDE Drives Setup

In addition to listing the different IDE devices, there are options for configuring the serial and parallel IDE controllers.

Parallel ATA	This setting allows the user to disable one or both of the parallel IDE controllers.
Serial ATA	This setting allows the user to disable the serial ATA controllers.
Native Mode Operation	This setting is only available when the serial ATA controller is enabled. This allows the user to specify whether the parallel and serial ATA controllers will operate in “legacy” or “native” mode. By default, they will operate in native mode unless both parallel ATA controllers are populated and a serial ATA drive is present. Then the serial ATA drive will become “native” mode. The user can select Automatic or the serial ATA controller to run in “native” mode. However, running in “native” mode might not work with older operating systems.

To configure IDE Drives Setup, do the following:

1. Start the IBM Setup Utility program (see “Starting the IBM Setup Utility program” on page 19).
2. From the IBM Setup Utility program menu, select **Devices**.
3. Select **IDE Drives Setup**.
4. Select the desired devices and settings and press Enter.
5. Return to the IBM Setup Utility program menu and select **Exit** and then **Save Settings**.

Selecting a startup device

If the computer does not start up (boot) from a device such as the CD-ROM, diskette, or hard disk as expected, use one of the following procedures to select a startup device.

Selecting a temporary startup device

Use this procedure to startup from any boot device.

Note: Not all CDs, hard disks, and diskettes are startable (bootable).

1. Turn off the computer.
2. Press and hold the Enter key and turn on the computer. Release the Enter key when the logo appears.
3. The Access IBM Predesktop Area opens.
4. Click **Startup** and follow the instructions on the screen.

Note: Selecting a startup device from this list does not permanently change the startup sequence.

Changing the startup device sequence

To view or permanently change the configured startup device sequence, do the following:

1. Start the IBM Setup Utility program (see “Starting the IBM Setup Utility program” on page 19).
2. Select **Startup**.
3. Select **Startup Sequence**. See the information displayed on the right side of the screen.
4. Select the devices for the Primary Startup Sequence, the Automatic Startup Sequence, and the Error Startup Sequence.
5. Select **Exit** from the IBM Setup Utility menu and then **Save Settings** or **Save and exit the Setup Utility**.

If you have changed these settings and want to return to the default settings, select **Load Default Settings** on the Exit menu.

Advanced settings

On some computer models the Advanced settings menu includes a setting to Enable/Disable HyperThreading. This feature works only with HyperThreading-aware operating systems such as Microsoft Windows XP. The default setting for HyperThreading is Enabled. However, if you select **Set Defaults** and are using an operating system other than Windows XP, the computer performance might be degraded. Therefore, you should always set HyperThreading to Disabled unless you are sure your operating system supports HyperThreading.

Chapter 6. Replacing FRUs

FRU replacements are to be done by trained service technicians only.

Important: Before you install or remove any FRU, read "Safety information" on page 153. These precautions and guidelines will help you work safely.

Locating controls and connectors on the front of the computer

This section shows the various external connectors on the computer to which you can attach external devices.

- | | | | |
|----------|------------------------------------|----------|--------------------------------|
| 1 | Cover keylock (some models) | 6 | USB connectors (2) |
| 2 | Optical drive | 7 | Microphone connector (line in) |
| 3 | Hard disk drive activity indicator | 8 | Headphone connector (line out) |
| 4 | Power-on indicator | 9 | Diskette drive |
| 5 | Power button | | |

Locating connectors on the rear of the computer

The following illustration shows locations of connectors on the rear of the computer.

- | | | | |
|----------|--------------------------|-----------|--------------------------|
| 1 | Power cord connector | 8 | VGA monitor connector |
| 2 | Cable lock latch | 9 | Parallel connector |
| 3 | Rope clip (U-bolt) holes | 10 | Audio line-in connector |
| 4 | PCI adapter slots | 11 | Audio line-out connector |
| 5 | Serial connectors (2) | 12 | USB connectors (4) |
| 6 | Ethernet connector | 13 | PS/2 keyboard connector |
| 7 | USB connectors (2) | 14 | PS/2 mouse connector |

Note: Some connectors on the rear of the computer are color-coded to help determine where to connect the cables.

- Mouse - green
- Keyboard - purple
- Monitor - dark blue
- Microphone - pink
- Audio line-out - lime green

Opening the cover

Attention: Read “Safety information” on page 153 and “Handling electrostatic discharge-sensitive devices” on page 156 before opening the cover.

To open the cover:

1. Shut down your operating system, remove any media (diskettes, CDs, or tapes) from the drives, and turn off all attached devices and the computer.
2. Unplug all power cords from electrical outlets.
3. Disconnect all cables attached to the computer. This includes power cords, input/output (I/O) cables, and any other cables that are connected to the computer.
4. Remove the floor stand, if attached.
5. If a cover lock is installed, unlock the cover.
6. Press inward on the two buttons and rotate the top cover upward as illustrated.

Locating components

The following illustration will help you locate the various components in the computer.

- | | | | |
|----------|-----------------------------|-----------|--------------------|
| 1 | Cover | 8 | Heat sink |
| 2 | Power supply | 9 | Microprocessor |
| 3 | Optical drive | 10 | System board |
| 4 | Hard disk drive | 11 | Memory module |
| 5 | Rotating drive bay assembly | 12 | PCI riser assembly |
| 6 | Front plastic bezel | 13 | Chassis |
| 7 | Diskette drive | | |

Accessing system board components and drives

To access some components on the system board such as memory, the battery, and the Clear CMOS/BIOS recovery jumper, you might need to rotate the drives upward. You can also use this procedure to access the drives when updating to different or higher capacity drives.

To access system board components or drives:

1. Turn off the computer.
2. Open the cover. See “Opening the cover” on page 25.
3. Rotate the drives upward as illustrated.

Note: Make sure you note the location of any cable connectors and the routing of the cables before you disconnect from the drives or the system board.

4. If any PCI adapters are installed, remove the PCI riser and adapter cards. Do not remove any adapters from the riser card. See “Replacing a PCI adapter” on page 30.

Identifying parts on the system board

The system board (sometimes called the *planar* or *motherboard*) is the main circuit board in the computer. It provides basic computer functions and supports a variety of devices that are IBM-installed or that you can install later.

The following illustration shows the locations of parts on the system board.

- | | | | |
|----------|--|-----------|--|
| 1 | Fan connectors (2) | 8 | Promise of value (POV) daughter card connector |
| 2 | Memory connectors (2) | 9 | Diskette drive connector |
| 3 | SATA 1 IDE and SATA 2 IDE hard disk drive connectors (2) | 10 | Front panel connector |
| 4 | PCI riser connector | 11 | Power connector |
| 5 | Battery | 12 | PATA Primary IDE connector (hard disk drive and optical drive) |
| 6 | Clear CMOS/BIOS recovery jumper | 13 | Power connector |
| 7 | Speaker connector | 14 | Microprocessor |
| | | 15 | CD audio connector |

Replacing memory

The computer has two connectors for installing dual inline memory modules that provide up to a maximum of 2 GB of system memory.

When installing memory, the following rules apply:

- Use 2.5 V, 184-pin, double data rate static random access memory (DDR SDRAM), non-ECC memory modules.
- Use 128 MB, 256 MB, 512 MB, or 1 GB memory modules (when available) in any combination.

Note: Only DDR SDRAM memory modules can be used.

To replace memory modules:

1. Turn off the computer and disconnect the power cord from the electrical outlet and from the computer.
2. Disconnect all other cables attached to the computer.
3. Open the cover. See “Opening the cover” on page 25.
4. Access the system board. See “Accessing system board components and drives” on page 27.
5. Locate the memory module connectors. See “Identifying parts on the system board” on page 28.
6. Open the retaining clips to remove an existing memory module.

7. Make sure the notch in the replacement memory module aligns with the tab on the connector. Push or insert the memory module straight down into the connector until the retaining clips close.

8. Replace the PCI riser and adapters if it was removed.
9. Place the drives back to the original position.
10. Replace the cover. See “Closing the cover and connecting the cables” on page 46.

Replacing a PCI adapter

This section provides information and instructions for removing and replacing a PCI adapter. The computer has a riser card with two PCI expansion slots.

To remove and replace a PCI adapter:

1. Turn off the computer and disconnect the power cord from the electrical outlet and from the computer.
2. Disconnect all other cables attached to the computer.
3. Open the cover. See “Opening the cover” on page 25.
4. While holding the left rear of the computer chassis down, pull upward on the handle provided to remove the PCI riser including any adapters that are already installed.

5. Remove the PCI adapter being replaced from the riser.
6. Remove the new PCI adapter from its static-protective package.
7. Install the adapter into the appropriate slot in the PCI riser.

8. Position the adapter-slot-cover latch to retain the adapters.
9. Reinstall the PCI riser and adapters.
10. Close the cover. See “Closing the cover and connecting the cables” on page 46.

Replacing the battery

The computer has a special type of memory that maintains the date, time, and settings for built-in features, such as parallel-port assignments (configuration). A battery keeps this information active when you turn off the computer. If the battery fails, the date, time, and configuration information (including passwords) are lost. An error message is displayed when you turn on the computer.

To replace the battery:

1. Turn off the computer and disconnect the power cord from the electrical outlet and from the computer.
2. Disconnect all other cables attached to the computer.
3. Open the cover. See “Opening the cover” on page 25.
4. Refer to “Identifying parts on the system board” on page 28 and locate the battery.
5. Remove the PCI riser and PCI adapters that impede access to the battery.
6. Remove the old battery.

7. Install the new battery.

8. Install the PCI riser and adapters if removed.
9. Replace the cover, and connect the cables. See “Closing the cover and connecting the cables” on page 46.

Note: When the computer is turned on for the first time after battery replacement, an error message might be displayed. This is normal after replacing the battery.

10. Turn on the computer and all attached devices.
11. Use the IBM Setup Utility program to set the date and time and any passwords.

Replacing the power supply

1. Turn off the computer and disconnect the power cord from the electrical outlet and from the computer.
2. Disconnect all other cables attached to the computer.
3. Remove the four screws at the rear of the chassis.

4. Open the cover and rotate the drive bay assembly upward to gain access to the power supply cable connections.

5. Disconnect power supply cable connector P3 from the CD-ROM drive and P4 or P5 from the hard disk drive (HDD). Connector P4 is used for a parallel HDD and connector P5 is used for a serial HDD.
6. Disconnect power supply cable connectors P1 **1** and P2 **2** from the system board.

7. Remove the power supply assembly from the computer.

8. Install the new power supply assembly into the chassis so that the screw holes in the power supply assembly align with those in the chassis.

Note: Use only the screws provided by IBM.

9. Install and tighten the four power supply assembly screws into the rear of the chassis.
10. Reconnect power supply connectors P1 and P2 to the system board.
11. Reconnect power supply cable connector P3 to the CD-ROM drive and connector P4 or P5 to the HDD drive.
12. Use the following illustration to route the cables correctly. It is important to correctly route all power supply cables to avoid interference when lowering the drive bay assembly.

13. Ensure that all components have been reassembled correctly and that no tools or loose screws are left inside the computer.
14. Lower the drive bay assembly.
15. Go to “Closing the cover and connecting the cables” on page 46.

Replacing the system board, microprocessor, and heat sink

Attention: If the computer has been turned off for a long period of time the thermal grease between the microprocessor heat sink and the microprocessor might not allow them to be separated easily. In this case turn on the computer for a few minutes to soften the grease.

1. Turn off the computer and disconnect the power cord from the electrical outlet.
2. Disconnect all cables attached to the computer. This includes power cords, input/output (I/O) cables, and any other cables that are connected to the computer.
3. Open the cover. See “Opening the cover” on page 25.

4. While holding the left rear of the computer chassis down, pull upward on the handle provided, to remove the PCI riser card assembly along with any adapters.

5. Remove the plastic cover from the microprocessor heat sink **1**.
6. Completely loosen the screw in each of the two clamps **2** that secure the microprocessor heat sink. Tilt the two clamps away from the heat sink.

Figure 1. Microprocessor heat sink

7. Carefully twist the heat sink to break the grease seal to the microprocessor, then remove the heat sink.
8. Place the heat sink on a clean work surface.
9. See Figure 2 on page 36. Note the orientation of the beveled corner on the microprocessor **2**. This is important when reinstalling the microprocessor on the system board.

Figure 2. Microprocessor

10. Remove the microprocessor **2** from the system board by lifting the small handle **1** on the microprocessor. Carefully lift the microprocessor out of the socket.
 - If you are installing a new system board assembly, continue at Step 11.
 - If you are replacing only the microprocessor, go to “Replacing the microprocessor” on page 38.
11. Carefully take note of the location of all cable connections on the system board. It will be necessary to reconnect them properly when installing a new system board assembly.
12. Take note of the cable routing. It is important to route the cables properly when installing the new system board.
13. Disconnect the diskette drive cable from the system board by sliding the plastic cable retainer upward to release the cable.
14. Disconnect all other cables connected to the system board.

- | | | | |
|----------|--|-----------|----------------------------|
| 1 | Microprocessor heat sink | 8 | Diskette drive connector |
| 2 | Fan connectors (2) | 9 | Front panel connector |
| 3 | memory module connectors (2) | 10 | Power connector (P1) |
| 4 | SATA 1 IDE and SATA 2 IDE connectors (2) | 11 | PATA Primary IDE connector |
| 5 | PCI riser connector | 12 | Power connector (P2) |
| 6 | Speaker connector | 13 | Heat sink clamps |
| 7 | POV connector | 14 | CD audio connector |

- Using the two blue handles provided, lift the system board assembly out of the computer.

Note: You will have to tilt the system board assembly and move it around the edge of the power supply assembly to remove it from the computer.

- Take note of the location of the memory modules and remove them from the system board.
- Install the memory modules on the new system board in the same location as they were on the system board being replaced.
- Install the new system board assembly into the computer chassis by aligning the two tabs on the rear of the system board assembly with the slots in the rear of the computer chassis. Slide the system board assembly to the rear until the front edge of the system board assembly fits behind the flange in the front and is seated flush to the bottom of the chassis.
- Reconnect all cables that were disconnected from the system board. Make sure all cables are routed correctly.

- Install the microprocessor on the new system board. See “Replacing the microprocessor” on page 38. Return here after replacing the microprocessor.
- Install the PCI riser card.
- Lower the drive bay assembly into the normal position.
- Close the cover.
- Reconnect the external cables and power cords to the computer.

Replacing the microprocessor

To replace the microprocessor, do the following:

1. Make sure that the handle used to remove the microprocessor is fully in the up position. Otherwise the microprocessor pins might be damaged when installing the microprocessor.
2. Position the microprocessor so that the pins are aligned with the socket and with the beveled corner in the orientation as shown in Figure 2 on page 36.
3. Lower the handle until it is fully in the down position. This locks the microprocessor in place.
- 4.

Note: The cleaning pad and thermal grease are separate FRUs and are not included with the system board or microprocessor FRUs. These must be ordered separately and shipped along with the FRUs being replaced. Remove the cleaning pad from its package that came with the CRU and use the cleaning pad to wipe the thermal grease from the bottom of the heat sink.

Note: Be sure that all of the thermal grease is removed.

5. If you are replacing the same microprocessor that was removed, use a clean area of the cleaning pad to wipe the thermal grease from the microprocessor; then, dispose of the cleaning pad.
6. Use the thermal grease syringe to place 16 uniformly spaced dots of 0.01ML each on the top of the microprocessor.

Note: 0.01ML is one tick mark on the syringe. If the grease is properly applied, approximately half (0.02ML) of the grease will remain in the syringe.

7. Place the heat sink into position on the microprocessor.
8. When tightening the screws that clamp the heat sink, do not overtighten. Tighten the clamp screws evenly by tightening one side some and then the other until they are both snug.
9. Install the plastic cover over the heat sink.
10. Continue at Step 21 on page 37.

Replacing internal drives

This section provides information and instructions for removing and replacing internal drives.

When you install an internal drive, it is important to note the type of drive that you are installing.

The following illustrations show a parallel ATA IDE hard disk drive and a serial ATA IDE hard disk drive.

Parallel ATA IDE drive

Serial ATA IDE drive

Listed below are the various types of drives and the connector used to connect them to the system board. Each drive also requires the connection of a power cable from the power supply.

Serial ATA IDE hard disk drive

Connect to an SATA 1 IDE or SATA 2 IDE connector

Parallel ATA IDE hard disk drive

Connect to the PATA Primary IDE connector

CD-ROM, CD-RW, or DVD optical drives

Connect to the PATA Primary IDE connector

Diskette drive

Connect to the diskette drive connector

Replacing a CD-ROM, CD-RW, or DVD optical drive

1. Open the cover. See "Opening the cover" on page 25.
2. Rotate the drive bay upward to gain access to the cable connections. See "Accessing system board components and drives" on page 27 and "Locating components" on page 26.
3. Disconnect the signal and power cables from the drive.

Note: Blue straps are provided to help when disconnecting cables.

4. Slide the blue plastic drive lock **1** to the unlocked position.
5. Open the door at the front of the drive and slide it out the front of the computer.

6. Slide the new drive partially into the bay from the rear.

Note: Be sure to set the new drive's jumper from "Master" to "Cable Select" before installing it.

7. Connect the flat cable to the new drive.
8. Position the new drive completely into the bay and slide the blue plastic drive lock **1** to the locked position.
9. Depending on the type of drive you are installing, go to "Connecting an IDE hard disk or CD drive" on page 42.
10. Go to "Closing the cover and connecting the cables" on page 46.

Replacing the hard disk drive

1. Open the cover. See "Opening the cover" on page 25.
2. Rotate the drive bay upward to gain access to the cable connections. See "Accessing system board components and drives" on page 27 and "Locating components" on page 26.
3. If a CD drive is installed, it helps to disconnect the signal cable from the drive to access the hard disk drive cables.

Note: Blue straps are provided to help when disconnecting cables.

4. Disconnect the signal and power cables from the hard disk drive.
5. Rotate the hard disk drive and bracket to the rear by pulling on the blue handle provided in the direction of the arrow.

6. Lift the hard disk drive and bracket up to remove. The drive is removed from the bracket by flexing the bracket.
7. Install the new drive into the bracket and place the bracket into the slot.
8. Rotate the drive and bracket towards the front of the computer and snap it into position.
9. Depending on the type of drive you are installing, go to “Connecting a serial ATA hard disk drive” or “Connecting an IDE hard disk or CD drive” on page 42.

Note: Do not forget to reconnect the CD drive signal cable if it was disconnected.

10. Go to “Closing the cover and connecting the cables” on page 46.

Connecting a serial ATA hard disk drive

1. Locate the signal cable that came with the computer or with the new drive.

Note: When replacing a parallel ATA with a serial ATA hard disk drive, you must obtain the signal cable. It is not included with the computer.

2. Locate the SATA connectors on the system board. See “Identifying parts on the system board” on page 28.
3. Connect one end of the signal cable to the drive and the other to either the SATA 1 IDE or the SATA 2 IDE connector on the system board.

Note: It makes no difference which SATA connector you use.

4. Connect a power connector to the drive.
5. Lower the drive bay into the normal position.
6. Go to “Closing the cover and connecting the cables” on page 46.

Replacing the diskette drive

1. Open the cover. See “Opening the cover” on page 25.
2. Slide the blue plastic drive lock to the unlocked position.
3. Slide the drive towards the rear of the computer far enough to gain access to the flat cable connector on the drive.

4. Disconnect the flat cable from the drive.
5. Rotate the drive bay upward and remove the diskette drive.

To install a new diskette drive:

1. Slide the new drive partially into the bay from the rear.
2. Connect the flat cable to the new drive.
3. Slide the new drive completely into the bay and slide the blue plastic drive lock into the locked position.
4. Go to “Closing the cover and connecting the cables” on page 46.

Connecting an IDE hard disk or CD drive

1. Locate the three-connector signal cable that came with the computer. One end of the cable is connected to the system board IDE connector. The other two connectors allow you to connect two drives.
2. Make sure one end of the signal cable is connected to the PATA Primary IDE connector on the system board. See “Identifying parts on the system board” on page 28.
3. Connect an unused signal cable connector to the drive being installed.

Note: When connecting a hard disk drive make sure you connect it to the connector on the end of the cable. Use the other connector for the optical drive.

4. Connect a power connector to the drive.
5. If you have a CD-ROM drive audio cable (not included with computer), connect it to the drive and the system board. For the location of the CD audio connector, see “Identifying parts on the system board” on page 28.

6. Lower the drive bay into the normal position.
7. Go to “Closing the cover and connecting the cables” on page 46.

Replacing the speaker

To replace the speaker:

1. Turn off the computer and disconnect the power cord from the electrical outlet and from the computer.
2. Open the cover. See “Opening the cover” on page 25.
3. Rotate the drive bay assembly upward to gain access to the speaker.
4. Locate the speaker **1**. See Figure 3.
5. Disconnect the speaker cable from the system board. See “Identifying parts on the system board” on page 28.

Note: Make sure you note the location of the speaker cable when you disconnect it from the system board.

6. Remove the speaker by sliding it upward and out of the retaining bracket.

Note: You may need to slightly flex the side of the computer to aide in removing the speaker.

7. Install the new speaker and reconnect the speaker cable.
8. Lower the drive bay assembly.
9. Replace the cover, and connect the cables. See “Closing the cover and connecting the cables” on page 46.

Figure 3. Speaker, fan, power button and LED assembly

Replacing the power button and LED assembly

To replace the power button and LED assembly:

1. Turn off the computer and disconnect the power cord from the electrical outlet and from the computer.
2. Open the cover. See “Opening the cover” on page 25.
3. Rotate the drive bay assembly upward to gain access to the power button and LED assembly.
4. Disconnect the power button and LED assembly cable from the system board. See “Identifying parts on the system board” on page 28.

Note: Make sure you note the location of the power button and LED assembly cable when you disconnect it from the system board.

5. Lift the tab and slide the power button and LED assembly **2** out. See Figure 3 on page 43.
6. Install the new power button and LED assembly and reconnect the power button and LED assembly cable.
7. Lower the drive bay assembly.
8. Replace the cover, and connect the cables. See “Closing the cover and connecting the cables” on page 46.

Replacing the fan assembly

To replace the fan assembly:

1. Turn off the computer and disconnect the power cord from the electrical outlet and from the computer.
2. Open the cover. See “Opening the cover” on page 25.
3. Rotate the drive bay assembly upward to gain access to the fan assembly **3**. See Figure 3 on page 43.
4. Disconnect fan assembly cable from the system board. See “Identifying parts on the system board” on page 28.

Note: Make sure you note the location of the fan cable when you disconnect it from the system board.

5. Remove the front bezel by releasing the tab as shown.

6. Remove the plastic insert behind the bezel by releasing the tabs as shown:

7. Remove the fan assembly by releasing the tabs out as shown.

8. Install the new fan assembly and connect the fan cable to the system board.
9. Reinstall the plastic insert.
10. Reinstall the front bezel.
11. Lower the drive bay assembly.
12. Replace the cover, and connect the cables. See "Closing the cover and connecting the cables" on page 46.

Closing the cover and connecting the cables

After replacing a FRU, you need to install any removed parts, close the cover, and reconnect cables, including telephone lines and power cords. Also, depending on the FRU that is installed, you might need to confirm the updated information in the IBM Setup Utility program.

To close the cover and connect cables to the computer:

1. Ensure that all components have been reassembled correctly and that no tools or loose screws are left inside the computer.
2. Clear any cables that might impede the replacement of the cover.
3. Make sure that the drive locks are both in the **locked position**. Otherwise, you cannot close the cover.
4. Close the cover.
5. If a cover lock is installed, lock the cover.
6. If the computer is being placed in the vertical position, attach the floor stand.
Attention: To prevent overheating and possible component damage, always attach the floor stand when placing the computer in the vertical position.
7. Reconnect the external cables and power cords to the computer. See “Locating connectors on the rear of the computer” on page 24.
8. If you have replaced the system board, you must update (flash) the BIOS. See “Flash update procedures” on page 148.
9. To update the configuration, see “Starting the IBM Setup Utility program” on page 19.

Chapter 7. Symptom-to-FRU Index

The Symptom-to-FRU index lists error symptoms and possible causes. The most likely cause is listed first. Always begin with Chapter 3, "General Checkout," on page 11. This index can also be used to help you decide which FRUs to have available when servicing a computer. If you are unable to correct the problem using this index, go to "Undetermined problems" on page 89.

Notes:

- If you have both an error message and an incorrect audio response, diagnose the error message first.
- If you cannot run the diagnostic tests or you get a diagnostic error code when running a test, but did receive a POST error message, diagnose the POST error message first.
- If you did not receive any error message, look for a description of your error symptoms in the first part of this index.
- Check the hard disk drive jumper settings before you replace a hard disk drive.

Hard disk drive boot error

A hard disk drive boot error (error codes 1962 and I999030X) can have the following causes.

Error	FRU/Action
The start-up drive is not in the boot sequence in configuration.	Check the configuration and ensure the start-up drive is in the boot sequence.
No operating system installed on the boot drive.	Install an operating system on the boot drive.
The boot sector on the start-up drive is corrupted.	The drive must be formatted, do the following: <ol style="list-style-type: none">1. Attempt to access and recover (back-up) the failing hard disk drive.2. Using the operating systems programs, format the hard disk drive.
The drive is defective.	Replace the hard disk drive.

Power Supply Errors

If the power-on indicator is not on, the power supply fan is not running, or the computer will not power-off, use the following procedures.

Check/Verify	FRU/Action
Check the following for proper installation. <ul style="list-style-type: none">• Power Cord• On/Off Switch connector• On/Off Switch Power Supply connector• System Board Power Supply connectors• Microprocessor(s) connection	Reseat connectors
Check the power cord for continuity.	Power Cord

Check/Verify	FRU/Action
Check the power-on switch for continuity.	Power-on Switch

Diagnostic error codes

Refer to the following diagnostic error codes when using the diagnostic tests. See “Running diagnostics tests” on page 13 for the specific type for information about the Diagnostic programs.

In the following index, X can represent any number.

Diagnostic Error Code	FRU/Action
000-000-XXX BIOS Test Passed	1. No action
000-002-XXX BIOS Timeout	1. Flash the system. See “Flash update procedures” on page 148 2. System board
000-024-XXX BIOS Addressing test failure	1. Flash the system. See “Flash update procedures” on page 148 2. System board
000-025-XXX BIOS Checksum Value error	1. Flash the system. See “Flash update procedures” on page 148 2. Boot block 3. System board
000-026-XXX FLASH data error	1. Flash the system. See “Flash update procedures” on page 148 2. Boot block 3. System board
000-027-XXX BIOS Configuration/Setup error	1. Run Setup 2. Flash the system. See “Flash update procedures” on page 148 3. Boot block 4. System board
000-034-XXX BIOS Buffer Allocation failure	1. Reboot the system 2. Flash the system. See “Flash update procedures” on page 148 3. Run memory test 4. System board
000-035-XXX BIOS Reset Condition detected	1. Flash the system. See “Flash update procedures” on page 148 2. System board
000-036-XXX BIOS Register error	1. Flash the system. See “Flash update procedures” on page 148 2. Boot block 3. System board
000-038-XXX BIOS Extension failure	1. Flash the system. See “Flash update procedures” on page 148 2. Adapter card 3. System board

Diagnostic Error Code	FRU/Action
000-039-XXX BIOS DMI data error	<ol style="list-style-type: none"> 1. Flash the system. See “Flash update procedures” on page 148 2. System board
000-195-XXX BIOS Test aborted by user	<ol style="list-style-type: none"> 1. Information 2. Re-start the test, if necessary
000-196-XXX BIOS test halt, error threshold exceeded	<ol style="list-style-type: none"> 1. Press F3 to review the log file 2. Re-start the test to reset the log file
000-197-XXX BIOS test warning	<ol style="list-style-type: none"> 1. Make sure the component that is called out is connected and/or enabled. See Chapter 5, “Using the IBM Setup Utility,” on page 19 2. Re-run test 3. Replace the component that is called out in warning statement 4. Replace the component under test
000-198-XXX BIOS test aborted	<ol style="list-style-type: none"> 1. Make sure the component that is called out is connected and/or enabled. See Chapter 5, “Using the IBM Setup Utility,” on page 19 2. Flash the system and retest. See “Flash update procedures” on page 148 3. Go to “Undetermined problems” on page 89
000-199-XXX BIOS test failed, cause unknown	<ol style="list-style-type: none"> 1. Go to “Undetermined problems” on page 89 2. Flash the system and re-test 3. Replace component under function test
000-250-XXX BIOS APM failure	<ol style="list-style-type: none"> 1. Flash the system. See “Flash update procedures” on page 148 2. System board
000-270-XXX BIOS ACPI failure	<ol style="list-style-type: none"> 1. Flash the system. See “Flash update procedures” on page 148 2. System board
001-000-XXX System Test Passed	<ol style="list-style-type: none"> 1. No action
001-00X-XXX System Error	<ol style="list-style-type: none"> 1. System board

Beep symptoms

Beep symptoms are short tones or a series of short tones separated by pauses (intervals without sound). See the following examples.

Beeps	Description
1-2-X	<ul style="list-style-type: none"> • One beep • A pause (or break) • Two beeps • A pause (or break) • Any number of breaks
4	Four continuous beeps

Use the following table to diagnose beep symptoms.

Beep Symptom	FRU/Action
1-1-3 CMOS read-write error	<ol style="list-style-type: none"> 1. Run Setup 2. System Board
1-2-2-3 ROM BIOS check error	<ol style="list-style-type: none"> 1. System Board
1-2-1 Programmable Interval Timer failed	<ol style="list-style-type: none"> 1. System Board
1-2-2 DMA Initialization failed	<ol style="list-style-type: none"> 1. System Board
1-2-3 DMA page register write/read failed	<ol style="list-style-type: none"> 1. System Board
1-2-4 RAM refresh verification failed	<ol style="list-style-type: none"> 1. DIMM 2. System Board
1-3-3-1 1st 64K RAM test failed	<ol style="list-style-type: none"> 1. DIMM 2. System Board
1-3-2 1st 64K RAM parity test failed	<ol style="list-style-type: none"> 1. DIMM 2. Processor 3. System Board
2-2-3-1 Interrupt vector loading test failed	<ol style="list-style-type: none"> 1. System Board
2-1-1 Secondary DMA register failed	<ol style="list-style-type: none"> 1. System Board
2-1-2 Primary DMA register failed	<ol style="list-style-type: none"> 1. System Board
2-1-3 Primary interrupt mask register failed	<ol style="list-style-type: none"> 1. System Board
2-1-4 Secondary interrupt mask register failed	<ol style="list-style-type: none"> 1. System Board
2-2-1 Interrupt vector loading failed	<ol style="list-style-type: none"> 1. System Board
1-3-1-3 Keyboard controller failed	<ol style="list-style-type: none"> 1. System Board 2. Keyboard
2-2-3 CMOS power failure and checksum checks failed	<ol style="list-style-type: none"> 1. Battery 2. System Board

Beep Symptom	FRU/Action
2-2-4 CMOS configuration info validation failed	1. Battery 2. System Board
2-3-1 Screen initialization failed	1. Jumper on J28 2. System Board
2-3-2 Screen memory failed	1. System Board
2-3-3 Screen retrace failed	1. System Board
1-2 Search for video ROM failed	1. System Board
All other beep code sequences	1. System Board
Continuous beep	1. System Board
Repeating short beeps	1. Keyboard stuck key 2. Keyboard Cable 3. System Board

No-beep symptoms

Symptom/Error	FRU/Action
No beep during POST but computer works correctly.	1. System Board
No beep during POST.	1. See "Undetermined problems" on page 89. 2. System Board 3. Memory Module 4. Any Adapter or Device 5. Riser Card 6. Power Cord 7. Power Supply

POST error codes

Each time you power-on the system, it performs a series of tests that check the operation of the system and some options. This series of tests is called the *Power-On Self-Test*, or *POST*. POST does the following operations.

- Checks some basic system-board operations
- Checks the memory operation
- Starts the video operation
- Verifies that the diskette drive is working
- Verifies that the hard disk drive is working

If the POST finishes without detecting any problems, a single beep sounds and the first screen of the operating system or application program appears.

If the POST detects a problem, an error message appears on the screen. A single problem can cause several error messages to appear. When you correct the cause of the first error message, the other error messages probably will not appear on the screen the next time you turn on the system.

In the following index, X can represent any number.

POST Error Code	FRU/Action
000 SCSI Adapter not enabled	1. Verify adapter device and Bus Master fields are enabled in PCI configuration program. See documentation shipped with computer.
02X	1. SCSI Adapter
08X Check SCSI terminator installation.	1. SCSI Cable 2. SCSI Terminator 3. SCSI Device 4. SCSI Adapter
101 System board interrupt failure	1. System Board
102 System board timer error	1. System Board
106	1. System Board

Message/Symptom	FRU/Action
Some or all keys on the keyboard do not work	<ol style="list-style-type: none"> 1. Keyboard 2. Keyboard Cable 3. System Board

Undetermined problems

Check the power supply voltages (see “Power Supply Errors” on page 47). If the voltages are correct, return here and continue with the following steps.

1. Power-off the computer.
2. Remove or disconnect the following components (if installed) one at a time.
 - a. Non-IBM devices
 - b. External devices (modem, printer, or mouse)
 - c. Any adapters
 - d. Riser card
 - e. Memory modules
 - f. Extended video memory
 - g. External Cache
 - h. External Cache RAM
 - i. Hard disk drive
 - j. Diskette drive
3. Power-on the computer to re-test the system.
4. Repeat steps 1 through 3 until you find the failing device or adapter.

If all devices and adapters have been removed, and the problem continues, replace the system board (see “Replacing the system board, microprocessor, and heat sink” on page 34).

Chapter 8. Parts listing

This section lists field replaceable units (FRUs) for Machine Types 8183, 8184, 8320, 8417, 8418, 8419, and 8429.

Note: A CRU (Customer Replaceable Unit) is identified by a single asterisk (*) or two asterisks (**) in the CRU ID column. An N in the CRU ID Column means that the part is not a CRU. A single asterisk (*) means that the part is a Tier 1 CRU; two asterisks (**) mean that the part is a Tier 2 CRU.

Machine Type 8127

Item #	8127 FRUs	FRU#	CRU
1	Cover (all models)	26K1217	**
2	Power supply 200 W (all models)	24R2614	**
3	CD-ROM Drive 48X (Black) - w/o volume ctrl and headphone jack (models 11M)	71P7367	*
3	CD-ROM Drive 48X (Black) - w/o volume ctrl and headphone jack (models 11M)	71P7369	*

3	CD-ROM Drive 48X (Black) (models 11M)	40Y8805	*
4	HDD 40GB 7200 rpm EIDE (models 11M)	19K1568	*
5	Rotating bay assembly (all models)	03R0285	*
6	Plastic bezel kit (all models)	03R0288	*
7	Diskette drive 3.5", slim 1.44MB, 3MODE (models 11M)	36L8645	*
7	Diskette drive 3.5", slim 1.44MB, 3MODE (models 11M)	40Y8897	*
7	Diskette drive 3.5", slim 1.44MB, 3MODE (models 11M)	40Y8895	*
8	Heatsink for Prescott (models 11M)	13R9022	**
9	Intel 2.8GHZ Celeron Prescott (models 11M)	19R0411	**
10	System board, Gigabit E-net, no POV (Prescott CPU enabled) (models 11M)	89P7935	**
10	System board, Gigabit E-net, no POV (Prescott CPU enabled) (optional to 89P7935) (models 11M)	41D0651	**
11	512 MB SDRAM PC2700 (models 11M)	31P9122	*
12	Riser card assembly (all models)	89P7701	*
13	Chassis (all models)	03R0284	**

The FRUs listed in the following table are not illustrated.

8127 FRUs	FRU#	CRU
Tool-less hardfile tray (all models)	03R0302	*
Cable, pwr/LED (all models)	03R0283	*
Lock assembly (Random keyed) (models 11M)	03R0287	*
Internal plastic kit (all models)	03R0289	*
Cable, optical 1-drop ATA 100 (all models)	03R0291	*
Cable, 2-drop ATA 100 (all models)	03R0292	*
Cable, SATA (all models)	03R0293	*
Speaker assembly (all models)	03R0294	*
system board tray (all models)	03R0295	**
Fan assembly 60 x 20 mm (all models)	03R0296	*
Cable, Diskette drive (all models)	03R0297	*
Cable, C2 (squall) (models 11M)	09K9827	*
5.25 EMC shield (all models)	19K5548	*
Floor stand and vertical deflector (all models)	74P0404	*
Fan baffle for Prescott (models 11M)	26K1233	*
Battery (all models)	33F8354	*
Monitor cable (all models)	19R3015	*
Dongle (all models)	19R3017	*
Universal Adapter Bracket 5.25 to 3.5, No Bezel (for HDD)	32P4743	*
Mouse, optical wheel (models 11M)	89P5089	*
RJ11 connector adapter (Spain, Ireland) (All "G" models)	60H6043	*
RJ11 connector adapter (Austria) (All "G" models)	60H6045	*
RJ11 connector adapter (Belgium) (All "G" models)	60H6046	*
RJ11 connector adapter (Denmark) (All "G" models)	60H6047	*
RJ11 connector adapter (Norway, Finland) (All "G" models)	60H6048	*
RJ11 connector adapter (France) (All "G" models)	60H6049	*
RJ11 connector adapter (Germany) (All "G" models)	60H6050	*
RJ11 connector adapter (UK, NZ, HK) (All "G", "M", "B", "H" models)	60H6051	*
RJ11 connector adapter (Italy) (All "G" models)	60H6052	*
RJ11 connector adapter (Netherlands) (All "G" models)	60H6053	*
RJ11 connector adapter (Sweden) (All "G" models)	60H6054	*
RJ11 connector adapter (Switzerland) (All "G" models)	60H6055	*

Chapter 9. Additional Service Information

Security features

Security features in this section include the following:

- Passwords
- Vital Product Data
- Management Information Format (MIF)
- Alert on LAN

Passwords

The following section provides information about computer hardware and software-related passwords.

- Power-on Password
- Administrator Password
- Operating System Password

Power-on and Administrator passwords are set in the Setup Utility program. See “Starting the IBM Setup Utility program” on page 19 for information about running the Setup Utility.

Power-on password

A power-on password denies access to the computer by an unauthorized user when the computer is powered on. When a power-on password is active, the password prompt appears on the screen each time the computer is powered on. The computer starts after the proper password is entered.

Removing a power-on password

To service a computer with an active and unknown power-on password, power-off the computer and use the following procedure.

Note: On some models, this procedure will also remove the administrator password.
--

1. Unplug the power cord and remove the top cover.
2. Refer to “Identifying parts on the system board” on page 28 to find the Virtual clear CMOS/BIOS recovery jumper.
3. Move the recovery jumper from **normal** to **ROM recovery**.
4. Power-on the computer. The system senses the change in the position and erases the password.
5. Wait 30 seconds for beeps to sound, and then power down by holding the power button for 10 seconds.
6. Return the jumper to normal position.
7. Reset the date and time and remind the user to enter a new password when service is complete.

Administrator password

The administrator password is used to restrict access to the Configuration/Setup Utility program. If the administrator password is activated, and you do not enter the administrator password, the configuration can be viewed but not changed.

Note:

This computer has Enhanced Security Mode. If Enhanced Security mode is enabled and there is no password set, the computer will act as if Enhanced Security is disabled.

If Enhanced Security is Enabled and an administrator password is set, the administrator password must be entered to use the computer. If the administrator password is lost or forgotten, the system board in the computer must be replaced in order to regain access to the Configuration/Setup Utility program.

Administrator password control

The Administrator password is set in the Setup Configuration. Refer to “Starting the IBM Setup Utility program” on page 19.

Operating system password

An operating system password is very similar to a power-on password and denies access to the computer by an unauthorized user when the password is activated. The computer is unusable until the password is entered and recognized by the computer.

Erasing a lost or forgotten password (clearing CMOS)

This section applies to lost or forgotten passwords. For more information about lost or forgotten passwords, go to Access IBM.

Note: Some models have a POV daughter card installed on the system board. In these models, the password is stored in the EEPROM on the POV card and cannot be erased. See “Identifying parts on the system board” on page 28 for the location of the POV card.

To erase a forgotten password:

1. Refer to “Identifying parts on the system board” on page 28
2. Locate the Clear CMOS/BIOS recovery jumper on the system board. See “Identifying parts on the system board” on page 28
3. Move the jumper from the standard position (pins 1 and 2) to the maintenance or configure position (pins 2 and 3).
4. Install the PCI riser and adapters if removed.
5. Lower the drives and reconnect any cables that were disconnected.
6. Close the cover and connect the power cable. See “Closing the cover and connecting the cables” on page 46.
7. Restart the computer, leave it on for approximately 10 seconds, and then turn off the computer.
8. Repeat step 1.
9. Move the CMOS/BIOS recovery jumper back to the standard position (pins 1 and 2).
10. Reassemble the computer and close the cover. See “Closing the cover and connecting the cables” on page 46.

Vital product data

Each computer has a unique Vital Product Data (VPD) code stored in the nonvolatile memory on the system board. After you replace the system board, the VPD must be updated. To update the VPD, see “Flash update procedures” on page 148.

Management Information Format (MIF)

Management Information Format (MIF) is a file used to maintain a list of the system unit serial number along with all serialized components (for example, system board, riser card, memory, and processor).

At the time of computer manufacture, the EPROM will be loaded with the serial numbers of the system and all major components.

A company called Retain-a-Group is a central data warehouse offering serial number data management. Retain-a-Group acts as a focal point to law enforcement. The customer has the option to purchase serial number information and services from Retain-a-Group. It is the customer's responsibility to maintain the MIF file and to inform Retain-a-Group of any changes to the file.

Some customers may request their servicers to assist them in maintaining the MIF file when serialized components are replaced during hardware service. This assistance is between the customer and the servicer. The servicer can use the DMI MIF Browser to update the MIF information in the EPROM. It is anticipated that some servicers might charge for this service.

To update the EPROM using the DMI MIF Browser, use the following procedure.

1. Click **Start** from the desktop, then **Programs**.
2. Select **IBM SystemView Agent**
3. Select the **Serial Number Information** icon
4. Click the plus sign to expand.
5. Select the component you want to view or edit.
6. Double click on the component you want to change.
7. Enter new data in the *Value* field, then click **Apply**.

BIOS levels

An incorrect level of BIOS can cause false errors and unnecessary FRU replacement. Use the following information to determine the current level of BIOS installed in the computer, the latest BIOS available for the computer, and where to obtain the latest level of BIOS.

- Current Level BIOS information
 - Run the Configuration Utility to determine the level of BIOS installed.
- Sources for determining the latest level BIOS available
 1. IBM PC support web site: <http://www.ibm.com/pc/support/>
 2. IBM Support Center
 3. Levels 1 and 2 Support
 4. RETAIN[®]
- Sources for obtaining the latest level BIOS available
 1. IBM PC support web site: <http://www.ibm.com/pc/support/>
 2. IBM Support Center
 3. Levels 1 and 2 Support

To update (flash) the BIOS, see "Flash update procedures" on page 148.

Flash update procedures

This section details how to flash (update) the BIOS.

Updating (flashing) BIOS from a diskette

1. Insert a system program update (flash) diskette into the diskette drive (drive A) in the computer. System program updates are available at <http://www.ibm.com/pc/support/> on the World Wide Web.
2. Turn on the computer. If it is on already, you must turn it off and back on again. The update begins.

Updating (flashing) BIOS from your operating system

Note: Due to constant improvements being made to the IBM Web site, Web page content (including the links referenced in the following procedure) is subject to change.

1. From your browser, type <http://www.ibm.com/pc/support/> in the address field and press Enter.
2. Locate the Downloadable files for your machine type.
3. Under Select your product, choose your machine type and click **Go**.
4. In Downloadable file by category, click **BIOS**.
5. Under Download files - BIOS by date, click your machine type.
6. Scroll down and look for a .txt file that has instructions for Flash BIOS update from the operating system. Click the .txt file.
7. Print these instructions. This is very important since they are not on the screen after the download begins.
8. From your browser, Click **Back** to return to the list of files. Carefully follow the printed instructions to download, extract, and install the update.

Recovering from a POST/BIOS update failure

If power to the computer is interrupted while POST/BIOS is being updated (flash update), the computer might not restart correctly. If this happens, perform the following procedure (also known as a Boot-block Recovery):

1. Turn off the computer and any attached devices, such as printers, monitors, and external drives.
2. Unplug all power cords from electrical outlets, and open the cover. See "Opening the cover" on page 25.
3. Locate the Clear CMOS/Recovery jumper on the system board. See Identifying parts on the system board in the chapter for your model type.
4. If necessary, refer to Installing adapters to remove any adapters that impede access to the Clear CMOS/Recovery jumper.
5. Move the jumper from the standard position (pins 1 and 2) to pins 2 and 3.
6. Replace the cover. See Replacing the cover and connecting the cables in the chapter for your model type.
7. Reconnect the power cords for the computer and monitor to electrical outlets.
8. Insert the POST/BIOS update (flash) diskette into drive A, and turn on the computer and the monitor.
9. After the update session is completed, there will be no video and the series of beeps will end. Remove the diskette from the diskette drive, and turn off the computer and monitor.

10. Unplug the power cords from electrical outlets.
11. Open the cover. See "Opening the cover" on page 25.
12. Remove any adapters that impede access to the BIOS Configuration jumper.
13. Replace the Clear CMOS/Recovery jumper to its original position.
14. Replace any adapters that were removed.
15. Close the cover and reconnect any cables that were disconnected.
16. Turn on the computer to restart the operating system.

Power management

Power management reduces the power consumption of certain components of the computer such as the system power supply, processor, hard disk drives, and some monitors. Advanced Power Management and Rapid Resume™ Manager are features of some personal computers.

Automatic configuration and power interface (ACPI) BIOS

Being an ACPI BIOS system, the operating system is allowed to control the power management features of the computer and the setting for Advanced Power Management (APM) BIOS mode are ignored. Not all operating systems support ACPI BIOS mode.

Advanced Power Management

Energy-saving settings can be viewed and changed by using the Advanced Power Management menu in the Configuration/Setup Utility program.

Attention:

If a device, such as a monitor, does not have power-management capabilities, it can be damaged when exposed to a reduced-power state. Before making energy-saving selections for the monitor, check the documentation supplied with the monitor to see if it supports Display Power Management Signaling (DPMS).

Automatic Hardware Power Management features

Automatic Hardware Power Management can reduce the power states of the computer, processor, and monitor (if the monitor supports DPMS) if they are inactive for a predetermined length of time.

Set the time for the system to enter a low-power state.

You can define the amount of energy savings by specifying values for the following options.

- **System Power**
 - Select **On** for the computer to remain on.
 - Select **Off** for the computer to shut down.
- **Display**

Set display to be disabled or to be reduced at these power states:

 - **Standby:** Screen is blank, but can be restored immediately when any activity is detected.
 - **Suspend:** Monitor uses less power than in Standby mode. Screen image is restored after a few seconds when any activity is detected.
 - **Off:** Monitor power is off. Press Monitor power button to restore power. On some monitors, you might have to depress the power button twice.

Setting Automatic Hardware Power Management features

1. Start the Configuration/Setup Utility program (see “Starting the IBM Setup Utility program” on page 19).
2. Select **Power Management** from the Configuration/Setup Utility program menu.

3. Select **APM BIOS Mode** within the APM sub menu and be sure it is set to **Enabled**. If it is not, press Left Arrow (←) or Right Arrow (→) to change the setting.
4. Select **Automatic Hardware Power Management**.
5. Set **Automatic Hardware Power Management** to **Enabled**.
6. Select values for the three categories of power management (system power, processor speed, and display), as necessary.
7. Set **Hard Disk** to **Enabled** or **Disabled**.

Note: This does not apply to SCSI drives.

8. Press **Esc** twice to return to the Configuration/Setup Utility program menu.
9. Before you exit from the program, select **Save Settings** from the Configuration/Setup Utility program menu.
10. To exit from the Configuration/Setup Utility program, press **Esc** and follow the instructions on the screen.

Automatic Power-On features

The Automatic Power-On features within the Power Management menu allow you to enable and disable features that turn on the computer automatically.

- **Serial Port A Ring Detect:** With this feature set to **Enabled** and an external modem connected to serial port (COM1), the computer will turn on automatically when a ring is detected on the modem.
- **PCI Modem Ring Detect:** With this feature set to **Enabled**, the computer will turn on automatically when a ring is detected on the internal modem.
- **PCI Wake Up:** This feature allow PCI cards that support this capability to wake the system.
- **Wake Up on Alarm:** You can specify a date and time at which the computer will be turned on automatically. This can be either a single event or a daily event.
- **Wake on LAN:** If the computer has a properly configured token-ring or Ethernet LAN adapter card that is Wake on LAN-enabled and there is remote network management software, you can use the IBM-developed Wake on LAN feature. When you set Wake on LAN to **Enabled**, the computer will turn on when it receives a specific signal from another computer on the local area network (LAN).

Chapter 10. Related service information

Note: The service procedures are designed to help you isolate problems. They are written with the assumption that you have model-specific training on all computers, or that are familiar with the computers, functions, terminology, and service information provided in this manual.

Safety information

The following section contains the safety information that you need to be familiar with before servicing an IBM computer.

General safety

Follow these rules to ensure general safety:

- Observe good housekeeping in the area of the machines during and after maintenance.
- When lifting any heavy object:
 1. Ensure you can stand safely without slipping.
 2. Distribute the weight of the object equally between your feet.
 3. Use a slow lifting force. Never move suddenly or twist when you attempt to lift.
 4. Lift by standing or by pushing up with your leg muscles; this action removes the strain from the muscles in your back. *Do not attempt to lift any objects that weigh more than 16 kg (35 lb) or objects that you think are too heavy for you.*
- Do not perform any action that causes hazards to the customer, or that makes the equipment unsafe.
- Before you start the machine, ensure that other service representatives and the customer's personnel are not in a hazardous position.
- Place removed covers and other parts in a safe place, away from all personnel, while you are servicing the machine.
- Keep your tool case away from walk areas so that other people will not trip over it.
- Do not wear loose clothing that can be trapped in the moving parts of a machine. Ensure that your sleeves are fastened or rolled up above your elbows. If your hair is long, fasten it.
- Insert the ends of your necktie or scarf inside clothing or fasten it with a nonconductive clip, approximately 8 centimeters (3 inches) from the end.
- Do not wear jewelry, chains, metal-frame eyeglasses, or metal fasteners for your clothing.

Remember: Metal objects are good electrical conductors.
- Wear safety glasses when you are: hammering, drilling soldering, cutting wire, attaching springs, using solvents, or working in any other conditions that might be hazardous to your eyes.
- After service, reinstall all safety shields, guards, labels, and ground wires. Replace any safety device that is worn or defective.
- Reinstall all covers correctly before returning the machine to the customer.

Electrical safety

CAUTION:

Electrical current from power, telephone, and communication cables can be hazardous. To avoid personal injury or equipment damage, disconnect the attached power cords, telecommunication systems, networks, and modems before you open the server/workstation covers, unless instructed otherwise in the installation and configuration procedures.

Observe the following rules when working on electrical equipment.

Important: Use only approved tools and test equipment. Some hand tools have handles covered with a soft material that does not insulate you when working with live electrical currents.

Many customers have, near their equipment, rubber floor mats that contain small conductive fibers to decrease electrostatic discharges. Do not use this type of mat to protect yourself from electrical shock.

- Find the room emergency power-off (EPO) switch, disconnecting switch, or electrical outlet. If an electrical accident occurs, you can then operate the switch or unplug the power cord quickly.
- Do not work alone under hazardous conditions or near equipment that has hazardous voltages.
- Disconnect all power before:
 - Performing a mechanical inspection
 - Working near power supplies
 - Removing or installing main units
- Before you start to work on the machine, unplug the power cord. If you cannot unplug it, ask the customer to power-off the wall box that supplies power to the machine and to lock the wall box in the off position.
- If you need to work on a machine that has exposed electrical circuits, observe the following precautions:
 - Ensure that another person, familiar with the power-off controls, is near you.
Remember: Another person must be there to switch off the power, if necessary.
 - Use only one hand when working with powered-on electrical equipment; keep the other hand in your pocket or behind your back.
Remember: There must be a complete circuit to cause electrical shock. By observing the above rule, you may prevent a current from passing through your body.
 - When using testers, set the controls correctly and use the approved probe leads and accessories for that tester.
 - Stand on suitable rubber mats (obtained locally, if necessary) to insulate you from grounds such as metal floor strips and machine frames.

Observe the special safety precautions when you work with very high voltages; these instructions are in the safety sections of maintenance information. Use extreme care when measuring high voltages.

- Regularly inspect and maintain your electrical hand tools for safe operational condition.
- Do not use worn or broken tools and testers.
- *Never assume* that power has been disconnected from a circuit. First, *check* that it has been powered-off.
- Always look carefully for possible hazards in your work area. Examples of these hazards are moist floors, nongrounded power extension cables, power surges, and missing safety grounds.
- Do not touch live electrical circuits with the reflective surface of a plastic dental mirror. The surface is conductive; such touching can cause personal injury and machine damage.
- Do not service the following parts with the power on when they are removed from their normal operating places in a machine:
 - Power supply units
 - Pumps
 - Blowers and fans
 - Motor generators
 and similar units. (This practice ensures correct grounding of the units.)
- If an electrical accident occurs:
 - Use caution; do not become a victim yourself.
 - Switch off power.
 - Send another person to get medical aid.

Safety inspection guide

The intent of this inspection guide is to assist you in identifying potentially unsafe conditions on these products. Each machine, as it was designed and built, had required safety items installed to protect users and service personnel from injury. This guide addresses only those items. However, good judgment should be used to identify potential safety hazards due to attachment of non-IBM features or options not covered by this inspection guide.

If any unsafe conditions are present, you must determine how serious the apparent hazard could be and whether you can continue without first correcting the problem.

Consider these conditions and the safety hazards they present:

- Electrical hazards, especially primary power (primary voltage on the frame can cause serious or fatal electrical shock).
- Explosive hazards, such as a damaged CRT face or bulging capacitor
- Mechanical hazards, such as loose or missing hardware

The guide consists of a series of steps presented in a checklist. Begin the checks with the power off, and the power cord disconnected.

Checklist:

1. Check exterior covers for damage (loose, broken, or sharp edges).
2. Power-off the computer. Disconnect the power cord.
3. Check the power cord for:

- a. A third-wire ground connector in good condition. Use a meter to measure third-wire ground continuity for 0.1 ohm or less between the external ground pin and frame ground.
 - b. The power cord should be the appropriate type as specified in the parts listings.
 - c. Insulation must not be frayed or worn.
4. Remove the cover.
 5. Check for any obvious non-IBM alterations. Use good judgment as to the safety of any non-IBM alterations.
 6. Check inside the unit for any obvious unsafe conditions, such as metal filings, contamination, water or other liquids, or signs of fire or smoke damage.
 7. Check for worn, frayed, or pinched cables.
 8. Check that the power-supply cover fasteners (screws or rivets) have not been removed or tampered with.

Handling electrostatic discharge-sensitive devices

Any computer part containing transistors or integrated circuits (ICs) should be considered sensitive to electrostatic discharge (ESD). ESD damage can occur when there is a difference in charge between objects. Protect against ESD damage by equalizing the charge so that the machine, the part, the work mat, and the person handling the part are all at the same charge.

Notes:

1. Use product-specific ESD procedures when they exceed the requirements noted here.
2. Make sure that the ESD protective devices you use have been certified (ISO 9000) as fully effective.

When handling ESD-sensitive parts:

- Keep the parts in protective packages until they are inserted into the product.
- Avoid contact with other people.
- Wear a grounded wrist strap against your skin to eliminate static on your body.
- Prevent the part from touching your clothing. Most clothing is insulative and retains a charge even when you are wearing a wrist strap.
- Use the black side of a grounded work mat to provide a static-free work surface. The mat is especially useful when handling ESD-sensitive devices.
- Select a grounding system, such as those listed below, to provide protection that meets the specific service requirement.

Note: The use of a grounding system is desirable but not required to protect against ESD damage.

- Attach the ESD ground clip to any frame ground, ground braid, or green-wire ground.
- Use an ESD common ground or reference point when working on a double-insulated or battery-operated system. You can use coax or connector-outside shells on these systems.
- Use the round ground-prong of the ac plug on ac-operated computers.

Grounding requirements

Electrical grounding of the computer is required for operator safety and correct system function. Proper grounding of the electrical outlet can be verified by a certified electrician.

Safety notices (multi-lingual translations)

The caution and danger safety notices in this section are provided in the following languages:

- English
- Brazilian/Portuguese
- Chinese
- French
- German
- Italian
- Korean
- Spanish

DANGER

Electrical current from power, telephone and communication cables is hazardous.

To avoid a shock hazard:

- **Do not connect or disconnect any cables or perform installation, maintenance, or reconfiguration of this product during an electrical storm.**
- **Connect all power cords to a properly wired and grounded electrical outlet.**
- **Connect to properly wired outlets any equipment that will be attached to this product.**
- **When possible, use one hand only to connect or disconnect signal cables.**
- **Never turn on any equipment when there is evidence of fire, water, or structural damage.**
- **Disconnect the attached power cords, telecommunications systems, networks, and modems before you open the device covers, unless instructed otherwise in the installation and configuration procedures.**
- **Connect and disconnect cables as described in the following table when installing, moving, or opening covers on this product or attached devices.**

To Connect	To Disconnect
<ol style="list-style-type: none">1. Turn everything OFF.2. First, attach all cables to devices.3. Attach signal cables to connectors.4. Attach power cords to outlet.5. Turn device ON.	<ol style="list-style-type: none">1. Turn everything OFF.2. First, remove power cords from outlet.3. Remove signal cables from connectors.4. Remove all cables from devices.

CAUTION:

When replacing the lithium battery, use only IBM Part Number 33F8354 or an equivalent type battery recommended by the manufacturer. If your system has a module containing a lithium battery, replace it only with the same module type made by the same manufacturer. The battery contains lithium and can explode if not properly used, handled, or disposed of.

Do not:

- Throw or immerse into water
- Heat to more than 100°C (212°F)
- Repair or disassemble

Dispose of the battery as required by local ordinances or regulations.

CAUTION:

When laser products (such as CD-ROMs, DVD-ROM drives, fiber optic devices, or transmitters) are installed, note the following:

- Do not remove the covers. Removing the covers of the laser product could result in exposure to hazardous laser radiation. There are no serviceable parts inside the device.
- Use of controls or adjustments or performance of procedures other than those specified herein might result in hazardous radiation exposure.

DANGER: Some laser products contain an embedded Class 3A or Class 3B laser diode. Note the following:

Laser radiation when open. Do not stare into the beam, do not view directly with optical instruments, and avoid direct exposure to the beam.

≥18 kg (37 lbs)

≥32 kg (70.5 lbs)

≥55 kg (121.2 lbs)

CAUTION:

Use safe practices when lifting.

CAUTION:

The power control button on the device and the power switch on the power supply do not turn off the electrical current supplied to the device. The device also might have more than one power cord. To remove all electrical current from the device, ensure that all power cords are disconnected from the power source.

CAUTION:

Do not place any object weighing more than 82 kg (180 lbs.) on top of rack-mounted devices.

PERIGO

A corrente elétrica proveniente de cabos de alimentação, de telefone e de comunicações é perigosa.

Para evitar risco de choque:

- Não conecte ou desconecte cabos e não realize instalação, manutenção ou reconfiguração deste produto durante uma tempestade com raios.
- Conecte todos os cabos de alimentação a tomadas elétricas corretamente instaladas e aterradas.
- Conecte todos os equipamentos ao qual esse produto será conectado a tomadas corretamente instaladas.
- Sempre que possível, utilize apenas uma das mãos para conectar ou desconectar cabos de sinal.
- Nunca ligue qualquer equipamento quando existir evidência de danos por fogo, água ou na estrutura.
- Desconecte cabos de alimentação, sistemas de telecomunicação, redes e modems antes de abrir as tampas dos dispositivos, a menos que especificado de maneira diferente nos procedimentos de instalação e configuração.
- Conecte e desconecte cabos conforme descrito na seguinte tabela, ao instalar ou movimentar este produto ou os dispositivos conectados, ou ao abrir suas tampas.

Para Conectar:	Para Desconectar:
<ol style="list-style-type: none">1. DESLIGUE Tudo.2. Primeiramente, conecte todos os cabos aos dispositivos.3. Conecte os cabos de sinal aos conectores.4. Conecte os cabos de alimentação às tomadas.5. LIGUE os dispositivos.	<ol style="list-style-type: none">1. DESLIGUE Tudo.2. Primeiramente, remova os cabos de alimentação das tomadas.3. Remova os cabos de sinal dos conectores.4. Remova todos os cabos dos dispositivos.

CUIDADO:

Ao substituir a bateria de lítio, utilize apenas uma bateria IBM, Número de Peça 33F8354 ou uma bateria de tipo equivalente, recomendada pelo fabricante. Se o seu sistema possui um módulo com uma bateria de lítio, substitua-o apenas pelo mesmo tipo de módulo, do mesmo fabricante. A bateria contém lítio e pode explodir se não for utilizada, manuseada e descartada de maneira correta.

Não:

- Jogue ou coloque na água
- Aqueça a mais de 100°C (212°F)
- Conserte nem desmonte

Para descartar a bateria, entre em contato com a área de atendimento a clientes IBM, pelo telefone (011) 889-8986, para obter informações sobre como enviar a bateria pelo correio para a IBM.

PRECAUCIÓN:

Quando produtos a laser (unidades de CD-ROM, unidades de DVD, dispositivos de fibra ótica, transmissores, etc.) estiverem instalados, observe o seguinte:

- Não remova as tampas. A remoção das tampas de um produto a laser pode resultar em exposição prejudicial à radiação de laser. Nenhuma peça localizada no interior do dispositivo pode ser consertada.
- A utilização de controles ou ajustes ou a execução de procedimentos diferentes dos especificados aqui pode resultar em exposição prejudicial à radiação.

PERIGO

Alguns produtos a laser contêm um diodo laser da Classe 3A ou Classe 3B embutido. Observe o seguinte:

Radiação de laser quando aberto. Não olhe diretamente para o raio a olho nu ou com instrumentos óticos, e evite exposição direta ao raio.

≥18 kg (37 lbs)

≥32 kg (70.5 lbs)

≥55 kg (121.2 lbs)

CUIDADO:

Ao levantar a máquina, faça-o com segurança.

CUIDADO:

Os botões Liga/Desliga localizados no dispositivo e na fonte de alimentação não desligam a corrente elétrica fornecida ao dispositivo. O dispositivo também pode ter mais de um cabo de alimentação. Para remover toda a corrente elétrica do dispositivo, assegure que todos os cabos de alimentação estejam desconectados da fonte de energia elétrica.

CUIDADO:

CUIDADO:

Não coloque nenhum objeto com peso superior a 82 kg (180 lbs.) sobre dispositivos montados em rack.

重要:

Server Library 中的所有提醒和危险条款前都有一个数字标识。该数字是用来交叉引用一个英文的提醒和危险条款及本部分中的与之对应的已翻译成其它文字的提醒和危险条款。

例如, 如果一个提醒条款前的数字为 1, 则本部分中相应的译文也带有标号 1。

在执行任何指示的操作之前, 请确保您已经阅读了全部提醒和危险条款。

声明 1

危险

电源、电话和通信电缆中带有危险电流。

为避免电击:

雷电期间不要拆接电缆或安装、维修及重新配置本产品。

将所有电源线连接至正确布线并已安全接地的电源插座上。

将与本产品连接的所有设备连接至正确布线的插座上。

尽量只使用单手拆接信号电缆。

有水、火及结构损坏迹象时, 请勿打开任何设备。

除非在安装配置过程中有明确指示, 否则, 打开设备机盖前应首先断开与电源线、远程通信系统、网络和调制解调器的所有连接。

安装、移动或打开本产品及其附带设备的机盖时, 应按下表所述连接和断开电缆。

连接时:

1. 关闭所有设备。
2. 首先将所有电缆连接至设备。
3. 将信号电缆连接至接口。
4. 将电源线连接至插座。

断开连接时:

1. 关闭所有设备。
2. 首先从插座中拔出电源线。
3. 从接口上拔下信号电缆。

声明 2

警告:

更换锂电池时，只能使用 IBM 产品号 33F8354 或者是厂商推荐的等同类型的电池。

如果系统模块中含有锂电池，则只能使用同一厂商制造的同一类型的模块进行更换。电池中含有锂，如果使用、拿放或处理不当，可能会发生爆炸。

请勿对电池进行下列操作：
扔入或浸入水电
加热超过 100 ° (212 F)
进行修理或分解
请按本地法规要求处理电池。

声明 3

警告:

安装激光产品（如 CD-ROM、DVD 驱动器、光纤设备或送话器）时，应注意以下事项：

不要拆除外盖。拆除激光产品的外盖可能会导致激光辐射的危险，本设备中没有用户可维修的部件。

非此处指定的其它控制、调整或与性能有关的操作都有可能致激光辐射的危险。

危险

某些激光产品中包含内嵌的 3A 级或 3B 级激光二极管。请注意以下事项。
打开时会产生激光辐射。不要直视光束，不要使用光学仪器直接观看光束，避免直接暴露于光束之下。

声明 4

≥18 kg (37 磅)

≥32 kg (70.5 磅)

≥55 kg (121.2 磅)

警告：
抬起时请采用安全操作方法。

声明 5

警告：

使用设备上的电源控制按钮和电源上的开关都不能断开本设备上的电流。
另外，本设备可能带有多条电源线。如要断开设备上的所有电流，请确保所有电源线均已与电源断开连接。

声明 6

警告：

如果在电源线连接设备的一端安装了固定松紧夹，则必须将电源线的另一端连接至使用方便的电源。

声明 7

警告:

如果设备带有外门，则在移动或抬起设备前应将其拆除或固定以避免造成人员伤害。外门支撑不了设备的重量。

声明 8

警告:

不要拆除电源外盖或贴有下列标签的任何部件。

贴有此标签的组件内部存在高电压、高电流的危险。这些组件中没有用户可维修的部件。如果怀疑其中的部件存在问题，应与服务技术人员联系。

声明 9

警告:

为避免人员伤害，拆除设备上的风扇前应按下热插拔风扇电缆。

声明 10

警告:

机柜安装的设备上面不能放置重于 82kg (180 磅) 的物品。

> 82 kg (180 磅)

声明 11

警告:

下面的标签表明附近有锋利的边、角或接头。

声明 12

警告:

下面的标签表明附近有高热表面。

重要資訊：

Server Library 中所有「注意」及「危險」的聲明均以數字開始。此一數字是用來作為交互參考之用，英文「注意」或「危險」聲明可在本節中找到相同內容的「注意」或「危險」聲明的譯文。

例如，有一「危險」聲明以數字 1 開始，則該「危險」聲明的譯文將出現在本節的「聲明」1 中。

執行任何指示之前，請詳讀所有「注意」及「危險」的聲明。

聲明 1

危險

電源、電話及通信電纜上所產生的電流均有危險性。

欲避免電擊危險：

- 在雷雨期間，請勿連接或切斷本產品上的任何電纜線，或安裝、維修及重新架構本產品。
- 請將電源線接至接線及接地正確的電源插座。
- 請將本產品隨附的設備連接至接線正確的插座。
- 儘可能使用單手來連接或切斷信號電纜線。
- 當設備有火燒或泡水的痕跡，或有結構性損害時，請勿開啓該設備的電源。
- 在安裝及架構之時，若非非常熟悉，在開啓裝置蓋子之前，請切斷電源線、電信系統、網路及數據機。
- 在安裝、移動本產品或附加裝置，或開啓其蓋子時，請依照下表中「連接」及「切斷」電纜線的步驟執行。

連接：

1. 關閉所有開關。
2. 先將所有電纜線接上裝置。
3. 將信號電纜線接上接頭。
4. 再將電源線接上電源插座。
5. 開啓裝置的電源。

切斷：

1. 關閉所有開關。
2. 先自電源插座拔掉電源線。
3. 拔掉接頭上的所有信號電纜。
4. 再拔掉裝置上的所有電纜線。

聲明 2

注意：

更換鋰電池時，只可使用 IBM 零件編號 33F8354 的電池，或製造商建議之相當類型的電池。若系統中具有包含鋰電池的模組，在更換此模組時，請使用相同廠商製造的相同模組類型。如未正確使用、處理或丟棄含有鋰的電池時，可能會引發爆炸。

請勿將電池：

- 丟入或浸入水中
- 加熱超過 100 °C (212 °F)
- 修理或拆開

請遵照當地法令規章處理廢棄電池。

聲明 3

注意：

安裝雷射產品(如 CD-ROM、DVD 光碟機、光纖裝置或發射器)時，請注意下列事項：

- 請勿移開蓋子。移開雷射產品的蓋子，您可能會暴露於危險的雷射輻射之下。裝置中沒有需要維修的組件。
- 不依此處所指示的控制、調整或處理步驟，您可能會暴露於危險的輻射之下。

危險

有些雷射產品含有內嵌式 Class 3A 或 Class 3B 雷射二極體。請注意下列事項：

開啓時會產生雷射輻射。請勿凝視光束，不要使用光學儀器直接觀察，且應避免直接暴露在光束下。

聲明 4

≥ 18 公斤 (37 磅)

≥ 32 公斤 (70.5 磅)

≥ 55 公斤 (121.2 磅)

注意：

抬起裝置時，請注意安全措施。

聲明 5

注意：

裝置上的電源控制按鈕及電源供應器上的電源開關均無法關閉裝置上的電流。
本裝置可能有一條以上的電源線。如要移除裝置上的所有電流，請確認所有電源線已與電源分離。

聲明 10

注意：

請勿將任何重量超過 82 公斤 (180 磅) 的物品置於已安裝機架的裝置上方。

> 82 公斤 (180 磅)

DANGER

Le courant électrique passant dans les câbles de communication, ou les cordons téléphoniques et d'alimentation peut être dangereux.

Pour éviter tout risque de choc électrique:

- Ne manipulez aucun câble et n'effectuez aucune opération d'installation, d'entretien ou de reconfiguration de ce produit au cours d'un orage.
- Branchez tous les cordons d'alimentation sur un socle de prise de courant correctement câblé et mis à la terre.
- Branchez sur des socles de prise de courant correctement câblés tout équipement connecté à ce produit.
- Lorsque cela est possible, n'utilisez qu'une seule main pour connecter ou déconnecter les câbles d'interface.
- Ne mettez jamais un équipement sous tension en cas d'incendie ou d'inondation, ou en présence de dommages matériels.
- Avant de retirer les carters de l'unité, mettez celle-ci hors tension et déconnectez ses cordons d'alimentation, ainsi que les câbles qui la relient aux réseaux, aux systèmes de télécommunication et aux modems (sauf instruction contraire mentionnée dans les procédures d'installation et de configuration).
- Lorsque vous installez ou que vous déplacez le présent produit ou des périphériques qui lui sont raccordés, reportez-vous aux instructions ci-dessous pour connecter et déconnecter les différents cordons.

Connexion	Déconnexion
1. Mettez les unités hors tension.	1. Mettez les unités hors tension.
2. Commencez par brancher tous les cordons sur les unités.	2. Débranchez les cordons d'alimentation des prises.
3. Branchez les câbles d'interface sur des connecteurs.	3. Débranchez les câbles d'interface des connecteurs.
4. Branchez les cordons d'alimentation sur des prises.	4. Débranchez tous les câbles des unités.
5. Mettez les unités sous tension.	

ATTENTION:

Remplacez la pile au lithium usagée par une pile de référence identique exclusivement - voir la référence IBM - ou par une pile équivalente recommandée par le fabricant. Si votre système est doté d'un module contenant une pile au lithium, vous devez le remplacer uniquement par un module identique, produit par le même fabricant. La pile contient du lithium et présente donc un risque d'explosion en cas de mauvaise manipulation ou utilisation.

- Ne la jetez pas à l'eau.
- Ne l'exposez pas à une température supérieure à 100 °C.
- Ne cherchez pas à la réparer ou à la démonter.

Pour la mise au rebut, reportez-vous à la réglementation en vigueur.

ATTENTION:

Si des produits laser sont installés (tels que des unités de CD-ROM ou de DVD, des périphériques contenant des fibres optiques ou des émetteurs-récepteurs), prenez connaissance des informations suivantes:

- N'ouvrez pas ces produits pour éviter une exposition directe au rayon laser. Vous ne pouvez effectuer aucune opération de maintenance à l'intérieur.
- Pour éviter tout risque d'exposition au rayon laser, respectez les consignes de réglage et d'utilisation des commandes, ainsi que les procédures décrites dans le présent document.

DANGER

Certains produits laser contiennent une diode laser de classe 3A ou 3B. Prenez connaissance des informations suivantes:

Rayonnement laser lorsque le carter est ouvert. évitez de regarder fixement le faisceau ou de l'observer à l'aide d'instruments optiques. évitez une exposition directe au rayon.

≥18 kg (37 lbs)

≥32 kg (70.5 lbs)

≥55 kg (121.2 lbs)

ATTENTION:

Faites-vous aider pour soulever ce produit.

ATTENTION:

Le bouton de mise sous tension/hors tension de l'unité et l'interrupteur d'alimentation du bloc d'alimentation ne coupent pas l'arrivée de courant électrique à l'intérieur de la machine. Il se peut que votre unité dispose de plusieurs cordons d'alimentation. Pour isoler totalement l'unité du réseau électrique, débranchez tous les cordons d'alimentation des socles de prise de courant.

ATTENTION:

Ne posez pas d'objet dont le poids dépasse 82 kg sur les unités montées en armoire.

VORSICHT

Elektrische Spannungen von Netz-, Telefon- und Datenübertragungsleitungen sind gefährlich.

Aus Sicherheitsgründen:

- Bei Gewitter an diesem Gerät keine Kabel anschließen oder lösen. Ferner keine Installations-, Wartungs- oder Rekonfigurationsarbeiten durchführen.
- Gerät nur an eine Schutzkontaktsteckdose mit ordnungsgemäß geerdetem Schutzkontakt anschließen.
- Alle angeschlossenen Geräte ebenfalls an Schutzkontaktsteckdosen mit ordnungsgemäß geerdetem Schutzkontakt anschließen.
- Signalkabel möglichst einhändig anschließen oder lösen.
- Keine Geräte einschalten, wenn die Gefahr einer Beschädigung durch Feuer, Wasser oder andere Einflüsse besteht.
- Die Verbindung zu den angeschlossenen Netzkabeln, Telekommunikationssystemen, Netzwerken und Modems ist vor dem öffnen des Gehäuses zu unterbrechen. Es sei denn, dies ist in den zugehörigen Installations- und Konfigurationsprozeduren anders angegeben.
- Nur nach den nachfolgend aufgeführten Anweisungen arbeiten, die für Installation, Transport oder öffnen von Gehäusen von Personal Computern oder angeschlossenen Einheiten gelten.

Kabel anschließen:	Kabel lösen:
<ol style="list-style-type: none">1. Alle Geräte ausschalten und Netzstecker ziehen.2. Zuerst alle Kabel an Einheiten anschließen.3. Signalkabel an Anschlußbuchsen anschließen.4. Netzstecker an Steckdose anschließen.5. Gerät einschalten.	<ol style="list-style-type: none">1. Alle Geräte ausschalten.2. Zuerst Netzstecker von Steckdose lösen.3. Signalkabel von Anschlußbuchsen lösen.4. Alle Kabel von Einheiten lösen.

ACHTUNG:

Eine verbrauchte Batterie nur durch eine Batterie mit der IBM Teilenummer 33F8354 oder durch eine vom Hersteller empfohlene Batterie ersetzen. Wenn Ihr System ein Modul mit einer Lithium-Batterie enthält, ersetzen Sie es immer mit dem selben Modultyp vom selben Hersteller. Die Batterie enthält Lithium und kann bei unsachgemäßer Verwendung, Handhabung oder Entsorgung explodieren.

Die Batterie nicht:

- mit Wasser in Berührung bringen.
- über 100 C erhitzen.
- reparieren oder zerlegen.

Die örtlichen Bestimmungen für die Entsorgung von Sondermüll beachten.

ACHTUNG:

Wenn ein Laserprodukt (z. B. CD-ROM-Laufwerke, DVD-Laufwerke, Einheiten mit Glasfaserkabeln oder Transmitter) installiert ist, beachten Sie folgendes.

- Das Entfernen der Abdeckungen des CD-ROM-Laufwerks kann zu gefährlicher Laserstrahlung führen. Es befinden sich keine Teile innerhalb des CD-ROM-Laufwerks, die vom Benutzer gewartet werden müssen. Die Verkleidung des CD-ROM-Laufwerks nicht öffnen.
- Steuer- und Einstellelemente sowie Verfahren nur entsprechend den Anweisungen im vorliegenden Handbuch einsetzen. Andernfalls kann gefährliche Laserstrahlung auftreten.

VORSICHT

Manche CD-ROM-Laufwerke enthalten eine eingebaute Laserdiode der Klasse 3A oder 3B. Die nachfolgend aufgeführten Punkte beachten.

Laserstrahlung bei geöffneter Tür. Niemals direkt in den Laserstrahl sehen, nicht direkt mit optischen Instrumenten betrachten und den Strahlungsbereich meiden.

≥18 kg

≥32 kg

≥55 kg

ACHTUNG:

Beim Anheben der Maschine die vorgeschriebenen Sicherheitsbestimmungen beachten.

ACHTUNG:

Mit dem Betriebsspannungsschalter an der Vorderseite des Servers und dem Betriebsspannungsschalter am Netzteil wird die Stromversorgung für den Server nicht unterbrochen. Der Server könnte auch mehr als ein Netzkabel aufweisen. Um die gesamte Stromversorgung des Servers auszuschalten, muß sichergestellt werden, daß alle Netzkabel aus den Netzsteckdosen herausgezogen wurden.

ACHTUNG:

Keine Gegenstände, die mehr als 82 kg wiegen, auf Rack-Einheiten ablegen.

PERICOLO

La corrente elettrica circolante nei cavi di alimentazione, del telefono e di segnale è pericolosa.

Per evitare il pericolo di scosse elettriche:

- Non collegare o scollegare i cavi, non effettuare l'installazione, la manutenzione o la riconfigurazione di questo prodotto durante i temporali.
- Collegare tutti i cavi di alimentazione ad una presa elettrica correttamente cablata e munita di terra di sicurezza.
- Collegare qualsiasi apparecchiatura collegata a questo prodotto ad una presa elettrica correttamente cablata e munita di terra di sicurezza.
- Quando possibile, collegare o scollegare i cavi di segnale con una sola mano.
- Non accendere qualsiasi apparecchiatura in presenza di fuoco, acqua o se sono presenti danni all'apparecchiatura stessa.
- Scollegare i cavi di alimentazione, i sistemi di telecomunicazioni, le reti e i modem prima di aprire i coperchi delle unità, se non diversamente indicato nelle procedure di installazione e configurazione.
- Collegare e scollegare i cavi come descritto nella seguente tabella quando si effettuano l'installazione, la rimozione o l'apertura dei coperchi di questo prodotto o delle unità collegate.

Per collegare:	Per scollegare:
1. SPEGNERE tutti i dispositivi.	1. SPEGNERE tutti i dispositivi.
2. Collegare prima tutti i cavi alle unità.	2. Rimuovere prima i cavi di alimentazione dalle prese elettriche.
3. Collegare i cavi di segnale ai connettori.	3. Rimuovere i cavi di segnale dai connettori.
4. Collegare i cavi di alimentazione alle prese elettriche.	4. Rimuovere tutti i cavi dalle unità.
5. ACCENDERE le unità.	

ATTENZIONE:

Quando si sostituisce la batteria al litio, utilizzare solo una batteria IBM con numero parte 33F8354 o batterie dello stesso tipo o di tipo equivalente consigliate dal produttore. Se il sistema di cui si dispone è provvisto di un modulo contenente una batteria al litio, sostituire tale batteria solo con un tipo di modulo uguale a quello fornito dal produttore. La batteria contiene litio e può esplodere se utilizzata, maneggiata o smaltita impropriamente.

Evitare di:

- Gettarla o immergerla in acqua
- Riscaldarla ad una temperatura superiore ai 100°C
- Cercare di ripararla o smontarla

Smaltire secondo la normativa in vigore (D.Lgs 22 del 5/2/9) e successive disposizioni nazionali e locali.

ATTENZIONE:

Quando si installano prodotti laser come, ad esempio, le unità DVD, CD-ROM, a fibre ottiche o trasmettitori, prestare attenzione a quanto segue:

- Non rimuovere i coperchi. L'apertura dei coperchi di prodotti laser può determinare l'esposizione a radiazioni laser pericolose. All'interno delle unità non vi sono parti su cui effettuare l'assistenza tecnica.
- L'utilizzo di controlli, regolazioni o l'esecuzione di procedure non descritti nel presente manuale possono provocare l'esposizione a radiazioni pericolose.

PERICOLO

Alcuni prodotti laser contengono all'interno un diodo laser di Classe 3A o Classe 3B. Prestare attenzione a quanto segue:

Aperto l'unità vengono emesse radiazioni laser. Non fissare il fascio, non guardarlo direttamente con strumenti ottici ed evitare l'esposizione diretta al fascio.

≥18 kg

≥32 kg

≥55 kg

ATTENZIONE:

Durante il sollevamento della macchina seguire delle norme di sicurezza.

ATTENZIONE:

Il pulsante del controllo dell'alimentazione situato sull'unità e l'interruttore di alimentazione posto sull'alimentatore non disattiva la corrente elettrica fornita all'unità. L'unità potrebbe disporre di più di un cavo di alimentazione. Per disattivare la corrente elettrica dall'unità, accertarsi che tutti i cavi di alimentazione siano scollegati dalla sorgente di alimentazione.

ATTENZIONE:

Non poggiare oggetti che pesano più di 82 kg sulla parte superiore delle unità montate in rack.

중요:

본 *Server Library*에 있는 모든 주의 및 위험 경고문은 번호로 시작합니다. 이 번호는 영문 주의 혹은 위험 경고문과 이 절에 나오는 번역된 버전의 주의 혹은 위험 경고문을 상호 참조하는 데 사용됩니다.

예를 들어, 주의 경고문이 번호 1로 시작하면, 번역된 해당 주의 경고문을 본 절의 경고문 1에서 찾아볼 수 있습니다.

모든 지시사항을 수행하기 전에 반드시 모든 주의 및 위험 경고문을 읽으십시오.

경고문 1

위험

전원, 전화 및 통신 케이블로부터 출력 나오는 전류는 위험합니다.

전기 충격을 피하려면:

- 뇌우를 동반할 때는 케이블의 연결이나 철수, 이 제품의 설치, 유지보수 또는 재구성을 하지 마십시오.
- 모든 전원 코드를 적절히 배선 및 접지해야 합니다.
- 이 제품에 연결될 모든 장비를 적절하게 배선된 콘센트에 연결하십시오.
- 가능한 한 신호 케이블을 한 손으로 연결하거나 끊으십시오.
- 화재, 수해 또는 구조상의 손상이 있을 경우 장비를 켜지 마십시오.
- 설치 및 구성 프로시저에 다른 설명이 없는 한, 장치 덮개를 열기 전에 연결된 전원 코드, 원거리 통신 시스템, 네트워크 및 모뎀을 끊어 주십시오.
- 제품 또는 접속된 장치를 설치, 이동 및 덮개를 열 때 다음 설명에 따라 케이블을 연결하거나 끊도록 하십시오.

연결하려면:	연결을 끊으려면:
1. 모든 스위치를 끕니다.	1. 모든 스위치를 끕니다.
2. 먼저 모든 케이블을 장치에 연결합니다.	2. 먼저 콘센트에서 전원 코드를 뽑습니다.
3. 신호 케이블을 커넥터에 연결합니다.	3. 신호 케이블을 커넥터에서 제거합니다.
4. 콘센트에 전원 코드를 연결합니다.	4. 장치에서 모든 케이블을 제거합니다.
5. 장치 스위치를 켭니다.	

경고문 2

주의:

리튬 배터리를 교체할 때는 IBM 부품 번호 33F8354 또는 제조업체에서 권장하는 동등한 유형의 배터리를 사용하십시오. 시스템에 리튬 배터리를 갖고 있는 모듈이 있으면 동일한 제조업체에서 생산된 동일한 모듈 유형으로 교체하십시오. 배터리에 리튬이 있을 경우 제대로 사용, 처리 또는 처분하지 않으면 폭발할 수 있습니다.

다음은 주의하십시오.

- 던지거나 물에 담그지 않도록 하십시오.
- 100°C(212°F) 이상으로 가열하지 마십시오.
- 수리하거나 분해하지 마십시오.

지역 법령이나 규정의 요구에 따라 배터리를 처분하십시오.

경고문 3

주의:
레이저 제품(CD-ROMs, DVD 드라이브, 광 장치 또는 트랜스미터 등과 같은)이 설치되어 있을 경우 다음을 유의하십시오.

- 덮개를 제거하지 마십시오. 레이저 제품의 덮개를 제거했을 경우 위험한 레이저 광선에 노출될 수 있습니다. 이 장치 안에는 서비스를 받을 수 있는 부품이 없습니다.

- 여기에서 지정하지 않은 방식의 제어, 조절 또는 실행으로 인해 위험한 레이저 광선에 노출될 수 있습니다.

위험

일부 레이저 제품에는 클래스 3A 또는 클래스 3B 레이저 다이오드가 들어 있습니다. 다음을 주의하십시오.

열면 레이저 광선에 노출됩니다. 광선을 주시하거나 광학 기계를 직접 쳐다보지 않도록 하고 광선에 노출되지 않도록 하십시오.

경고문 4

≥18 kg (37 lbs)

≥ 32 kg (70.5 lbs)

≥ 55 kg (121.2 lbs)

주의:

기계를 들 때는 안전하게 들어 올리십시오.

경고문 5

주의:

장치의 전원 제어 버튼 및 전원 공급기의 전원 스위치는 장치에 공급되는 전류를 차단하지 않습니다. 장치에 둘 이상의 전원 코드가 연결되어 있을 수도 있습니다. 장치에서 모든 전류를 차단하려면 모든 전원 코드가 전원으로부터 차단되어 있는 지 확인하십시오.

2

1

경고문 10

주의:

서랍형 모델의 장치 상단에 82 kg(180 lbs.)이 넘는 물체를 올려 놓지 마십시오.

>82 kg (180 lbs)

PELIGRO

La corriente eléctrica de los cables telefónicos, de alimentación y de comunicaciones es perjudicial.

Para evitar una descarga eléctrica:

- No conecte ni desconecte ningún cable ni realice las operaciones de instalación, mantenimiento o reconfiguración de este producto durante una tormenta.
- Conecte cada cable de alimentación a una toma de alimentación eléctrica con conexión a tierra y cableado correctos.
- Conecte a tomas de alimentación con un cableado correcto cualquier equipo que vaya a estar conectado a este producto.
- Si es posible, utilice una sola mano cuando conecte o desconecte los cables de señal.
- No encienda nunca un equipo cuando haya riesgos de incendio, de inundación o de daños estructurales.
- Desconecte los cables de alimentación, sistemas de telecomunicaciones, redes y módems conectados antes de abrir las cubiertas del dispositivo a menos que se indique lo contrario en los procedimientos de instalación y configuración.
- Conecte y desconecte los cables tal como se describe en la tabla siguiente cuando desee realizar una operación de instalación, de traslado o de apertura de las cubiertas para este producto o para los dispositivos conectados.

Para la conexión	Para la desconexión
<ol style="list-style-type: none"> 1. APÁGUELO todo. 2. En primer lugar, conecte los cables a los dispositivos. 3. Conecte los cables de señal a los conectores. 4. Conecte cada cable de alimentación a la toma de alimentación. 5. ENCIENDA el dispositivo. 	<ol style="list-style-type: none"> 1. APÁGUELO todo. 2. En primer lugar, retire cada cable de alimentación de la toma de alimentación. 3. Retire los cables de señal de los conectores. 4. Retire los cables de los dispositivos.

PRECAUCIÓN:

Cuando desee sustituir la batería de litio, utilice únicamente el número de pieza 33F8354 de IBM o cualquier tipo de batería equivalente que recomiende el fabricante. Si el sistema tiene un módulo que contiene una batería de litio, sustitúyalo únicamente por el mismo tipo de módulo, que ha de estar creado por el mismo fabricante. La batería contiene litio y puede explotar si el usuario no la utiliza ni la maneja de forma adecuada o si no se desprende de la misma como corresponde.

No realice las acciones siguientes:

- Arrojarla al agua o sumergirla

- Calentarla a una temperatura que supere los 100°C (212°F)
- Repararla o desmontarla

Despréndase de la batería siguiendo los requisitos que exija el reglamento o la legislación local.

PRECAUCIÓN:

Cuando instale productos láser (como, por ejemplo, CD-ROM, unidades DVD, dispositivos de fibra óptica o transmisores), tenga en cuenta las advertencias siguientes:

- No retire las cubiertas. Si retira las cubiertas del producto láser, puede quedar expuesto a radiación láser perjudicial. Dentro del dispositivo no existe ninguna pieza que requiera mantenimiento.
- El uso de controles o ajustes o la realización de procedimientos que no sean los que se han especificado aquí pueden dar como resultado una exposición perjudicial a las radiaciones.

PELIGRO

Algunos productos láser contienen un diodo de láser incorporado de Clase 3A o de Clase 3B. Tenga en cuenta la advertencia siguiente.

Cuando se abre, hay radiación láser. No mire fijamente el rayo ni lleve a cabo ningún examen directamente con instrumentos ópticos; evite la exposición directa al rayo.

≥18 kg

≥32 kg

≥55 kg

PRECAUCIÓN:

Tome medidas de seguridad al levantar el producto.

PRECAUCIÓN:

El botón de control de alimentación del dispositivo y el interruptor de alimentación de la fuente de alimentación no apagan la corriente eléctrica suministrada al dispositivo. Es posible también que el dispositivo tenga más de un cable de alimentación. Para eliminar la corriente eléctrica del dispositivo, asegúrese de desconectar todos los cables de alimentación de la fuente de alimentación.

PRECAUCIÓN:

No coloque ningún objeto que pese más de 82 kg (180 libras) encima de los dispositivos montados en bastidor.

Send us your comments!

We want to know your opinion about this manual (part number 74P2661). Your input will help us to improve our publications.

Please photocopy this survey, complete it, and then fax it to **IBM HMM Survey** at **919-543-8167 (USA)**.

Name: _____

Phone number: _____

1. Do you like this manual?

Yes No

2. What would you like to see added, changed, or deleted in this manual?

3. What is your service experience level?

Less than five years

More than five years

4. Which computers do you service most?

Thank you for your response!

Problem determination tips

Due to the variety of hardware and software combinations that can be encountered, use the following information to assist you in problem determination. If possible, have this information available when requesting assistance from Service Support and Engineering functions.

- Machine type and model
- Processor or hard disk upgrades
- Failure symptom
 - Do diagnostics fail?
 - What, when, where, single, or multiple systems?
 - Is the failure repeatable?
 - Has this configuration ever worked?
 - If it has been working, what changes were made prior to it failing?
 - Is this the original reported failure?
- Reference/Diagnostics version
 - Type and version level
- Hardware configuration
 - Print (print screen) configuration currently in use
 - BIOS level
- Operating system software
 - Type and version level

Note: To eliminate confusion, identical systems are considered identical only if they:

1. Are the exact machine type and models
2. Have the same BIOS level
3. Have the same adapters/attachments in the same locations
4. Have the same address jumpers/terminators/cabling
5. Have the same software versions and levels
6. Have the same Reference/Diagnostics Diskette (version)
7. Have the same configuration options set in the system
8. Have the same setup for the operation system control files

Comparing the configuration and software set-up between "working and non-working" systems will often lead to problem resolution.

Notices

References in this publication to IBM products, programs, or services do not imply that IBM intends to make these available in all countries in which IBM operates. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Subject to IBM's valid intellectual property or other legally protectable rights, any functionally equivalent product, program, or service may be used instead of the IBM product, program, or service. The evaluation and verification of operation in conjunction with other products, except those expressly designated by IBM, are the responsibility of the user.

Any performance data contained herein was determined in a controlled environment. Therefore, the result obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.
