

## IBM TotalStorage Product Guide

### Strategic storage imperatives

Information technology is the lifeblood of any business, especially today when organizational performance depends on information on demand. Business accountability hinges on it, laws and regulations mandate it, customers demand it and effective business processes rely on it. With information on demand, businesses can respond quickly with the flexibility to meet customer requirements, market opportunities or external threats. But as utterly valuable as information on demand has become, it also has become more costly to store, maintain and protect.

### A comprehensive approach to the challenges of providing information on demand

To meet these challenges, IBM® has taken a holistic approach to the problem, looking well beyond storage products alone to help you share, manage and protect your data. To provide complete solutions for businesses using the on demand model, IBM has addressed three areas of IT.

### Infrastructure simplification

Few would question the statement that IT infrastructures have grown more complex in recent years. The dramatic growth in the use of IT, combined with distributed computing architectures, is part of the reason. But business processes have also become more complex and integrated too, driving a greater need for complex interconnections among systems.

The added complexity that accompanies growth can stand in the way of fully realizing the benefits of IT. *Infrastructure simplification* is a way to look at the entire IT operation and help eliminate the complexity that can raise costs, reduce reliability and create dependencies on specialized skills—factors making it harder to operate as an on demand business.

Three proven methods for simplifying an IT infrastructure are consolidation, virtualization and automated management. Each technique can be applied to all areas that compose an IT operation—servers, storage and networks.

Within the storage arena, consolidation can include reducing the number of data centers and sharing fewer large-capacity storage systems among a greater number of application servers. Consolidated resources can cost less and can be easier to share and protect.

Storage virtualization involves a shift in thinking from physical to logical—treating storage as a logical pool of resources, not individual devices. Not only can this help simplify the storage environment, but it also can help increase utilization and availability.

The storage arena is ripe with opportunities to lower administrative costs through automation. Once tasks are automated, administrators can deal with more strategic issues. In addition, automation can help reduce errors and contribute to higher system performance.

### Business continuity

On demand businesses rely on their IT systems to conduct business. Everything must be working all the time. Nothing less is acceptable. A sound and comprehensive *business continuity* strategy encompasses high availability, near continuous operations and disaster recovery. For each of these areas, the IBM TotalStorage® Resiliency Family includes a comprehensive set of products that are compatible with multiple platforms.

### Information lifecycle management

The primary goal of *information lifecycle management (ILM)* techniques is to optimize the storage and management of information based on its value to your business. An ILM process can help a business maximize the value of information, from the moment of its creation to the moment of its disposal. Corporate governance policies, business processes and compliance guidelines all influence ILM policies.

The primary capabilities from IBM that support ILM include optimized storage environments with tiered storage platforms, policy-based retention management software, content and records management applications, and non-erasable, non-rewritable media. The potential benefits to your business include improved risk management, optimum storage utilization, better handling of compliance issues and lower costs.

## Entry SAN switches for easy-to-use SMB solutions

<b>2005-H08 IBM TotalStorage SAN Switch H08</b>	<ul style="list-style-type: none"> <li>Provides SAN switching for IBM @server® xSeries®, iSeries™ and pSeries®. Entry 4 to 8-port, 1 and 2 Gbps fabric switch for Windows® and UNIX®, includes zoning, Fabric Watch and WEBTOOLS</li> </ul>
<b>2006-L10 IBM TotalStorage Storage Switch L10</b>	<ul style="list-style-type: none"> <li>Provides storage switching for IBM @server xSeries and IBM @server BladeCenter™. Entry 4 to 10-port, 1 or 2 Gbps storage switch for Windows and Linux®, includes zoning and integrated Web server</li> </ul>
<b>2026-E12 IBM TotalStorage SAN12M-1</b>	<ul style="list-style-type: none"> <li>Provides SAN switching for Intel® processor-based servers, IBM @server iSeries and pSeries. Entry 4, 8, 12-port, 1 and 2 Gbps fabric switch for Windows and UNIX, includes zoning, SANpilot and 4-port FlexPort upgrades</li> </ul>
<b>2034-212 McDATA 4300 Fabric Switch</b>	<ul style="list-style-type: none"> <li>Provides SAN switching for IBM @server xSeries. Entry 4, 8, 12-port, 1 and 2 Gbps fabric switch for Windows and Linux, includes zoning, SANpilot and 4-port FlexPort upgrade options</li> </ul>

## Midrange SAN switches for scalable SMB and enterprise solutions

<b>2005-H16 IBM TotalStorage SAN Switch H16</b>	<ul style="list-style-type: none"> <li>Provides SAN switching for IBM @server xSeries, iSeries and pSeries. Midrange 8 to 16-port, 1 and 2 Gbps fabric switch for Windows and UNIX, includes zoning, Fabric Watch and WEBTOOLS</li> </ul>
<b>2109-F16 IBM TotalStorage SAN Switch F16</b>	<ul style="list-style-type: none"> <li>Provides SAN switching for IBM @server xSeries, iSeries and pSeries. Midrange 8 to 16-port, 1 and 2 Gbps fabric switch for Windows and UNIX, includes zoning, Fabric Watch and WEBTOOLS</li> </ul>
<b>2109-F32 IBM TotalStorage SAN Switch F32</b>	<ul style="list-style-type: none"> <li>Provides SAN switching for Intel processor-based servers, IBM @server iSeries, pSeries and zSeries. Midrange 16 to 32-port, 1 and 2 Gbps fabric and FICON® switch for Windows, Linux, UNIX and z/OS® includes zoning, Fabric Watch and WEBTOOLS</li> </ul>
<b>2026-224 IBM TotalStorage SAN24M-1</b>	<ul style="list-style-type: none"> <li>Provides SAN switching for Intel processor-based servers, IBM @server iSeries and pSeries. Entry 8, 16, 24-port, 1 and 2 Gbps fabric switch for Windows and UNIX, includes zoning, SANpilot and 8-port FlexPort upgrades</li> </ul>
<b>2026-232 IBM TotalStorage SAN32M-1</b>	<ul style="list-style-type: none"> <li>Provides SAN switching for Intel processor-based servers, IBM @server iSeries, pSeries and zSeries®. Midrange 8 to 32-port, 1 and 2 Gbps fabric and FICON switch for Windows and UNIX and z/OS, includes zoning, SANpilot</li> </ul>
<b>2061-020 Cisco MDS 9120 Fabric Switch</b>	<ul style="list-style-type: none"> <li>Provides SAN switching for Intel processor-based servers, IBM @server iSeries and pSeries. Midrange 4 to 20-port, 1 and 2 Gbps fabric switch for Windows and UNIX, includes Virtual SAN and Cisco Fabric Manager</li> </ul>
<b>2061-040 Cisco MDS 9140 Fabric Switch</b>	<ul style="list-style-type: none"> <li>Provides SAN switching for Intel processor-based servers, IBM @server iSeries and pSeries. Midrange 4 to 40-port, 1 and 2 Gbps fabric switch for Windows and UNIX, includes Virtual SAN and Cisco Fabric Manager</li> </ul>
<b>2062-D1A Cisco 9216A; 2062—D1H Cisco 9216i Multilayer Fabric Switch</b>	<ul style="list-style-type: none"> <li>Provides SAN switching for Intel processor-based servers, IBM @server iSeries, pSeries and zSeries. Midrange 16-port, 1 and 2 Gbps fabric and FICON switch for Windows, Linux, UNIX and z/OS server, includes one module slot, Virtual SAN and Cisco Fabric Manager. 9216i provides 14 Fibre Channel and 2 Gigabit Ethernet ports</li> </ul>

## Enterprise SAN directors for high availability and scalability enterprise solutions

<b>2109-M12 IBM TotalStorage SAN Switch M12</b>	<ul style="list-style-type: none"> <li>High availability enterprise SAN director for Intel processor-based servers, IBM @server iSeries, pSeries and zSeries. Provides one or two 16 to 64 port, 1 and 2 Gbps Fibre Channel and FICON switch for Windows, Linux, UNIX and z/OS servers</li> </ul>
<b>2109-M14 IBM TotalStorage SAN Switch M14</b>	<ul style="list-style-type: none"> <li>High availability enterprise SAN director for Intel processor-based servers, IBM @server iSeries, pSeries and zSeries. Provides 16 to 128 port, 1 and 2 Gbps Fibre Channel and FICON switch for Windows, Linux, UNIX and z/OS servers</li> </ul>
<b>2027-140 IBM TotalStorage SAN140M</b>	<ul style="list-style-type: none"> <li>High availability enterprise SAN director for Intel processor-based servers, IBM @server iSeries, pSeries and zSeries. Provides 16 to 140 port, 1 and 2 Gbps Fibre Channel and FICON switch for Windows, Linux, UNIX and z/OS servers</li> </ul>
<b>2032-064 McDATA Intrepid 6064 Director</b>	<ul style="list-style-type: none"> <li>High availability enterprise SAN director for Intel processor-based servers, IBM @server iSeries, pSeries and zSeries. Provides 16 to 64 port, 1 and 2 Gbps Fibre Channel and FICON switch for Windows, Linux, UNIX and z/OS servers</li> </ul>
<b>2042-001; -128; -256 CNT FC/9000 Directors</b>	<ul style="list-style-type: none"> <li>High availability enterprise SAN director for Intel processor-based servers, IBM @server iSeries, pSeries and zSeries. Provides 16 to 64; 24 to 128; 32 to 256 port, 1 and 2 Gbps Fibre Channel and FICON switch for Windows, Linux, UNIX and z/OS servers</li> </ul>
<b>2042-N16 CNT UltraNet Multi-service Director</b>	<ul style="list-style-type: none"> <li>High availability enterprise SAN director for Intel processor-based servers, IBM @server iSeries, pSeries and zSeries. Provides 32 to 256 port, 1 and 2 Gbps Fibre Channel and FICON switch for Windows, Linux, UNIX and z/OS servers</li> </ul>
<b>2062-D04 Cisco MDS 9506 Director</b>	<ul style="list-style-type: none"> <li>High availability enterprise SAN director for Intel processor-based servers, IBM @server iSeries, pSeries and zSeries. Provides 16 to 64 port (16-port modules) and 32 to 128 port (32-port modules) 1 and 2 Gbps Fibre Channel and FICON switch for Windows, Linux, UNIX and z/OS servers</li> </ul>
<b>2062-D07 Cisco MDS 9509 Director</b>	<ul style="list-style-type: none"> <li>High availability enterprise SAN director for Intel processor-based servers, IBM @server iSeries, pSeries and zSeries. Provides 16 to 112 port (16-port modules) and 32 to 224 port (32-port modules) 1 and 2 Gbps Fibre Channel and FICON switch for Windows, Linux, UNIX and z/OS servers</li> </ul>

IBM @server Systems and IBM TotalStorage

Customer demand for lightning-fast communication and transactions has driven the need for universal commitment to e-business. No matter what industry, or what size company, success today hinges on building a high-performance, responsive infrastructure that embraces open standards—exactly what you will find in the IBM @server product portfolio. Investments in servers often result in demands on disk and tape storage systems. IBM has a family of storage offerings that complements the @server product portfolio. There is no better storage offering for IBM @server systems than an IBM TotalStorage product. These offerings are tested and supported by IBM and are backed by outstanding IBM service and support.

IBM TotalStorage Proven Program Helps Simplify Interoperability

The IBM TotalStorage Proven™ Program is designed to help customers identify storage solutions and configurations that have been pretested for interoperability. IBM TotalStorage Proven means that the applications and hardware you choose from leading companies, combined with state-of-the-art IBM storage technology, can provide you with flexible, ready-to-run and more easily installed solutions that can help address your software and infrastructure needs.

Storage Proven means integrated solutions are more than just hardware and software—they are tested together for specific applications and configurations. IBM helps take the guesswork out of putting a total solution together, which can help simplify your purchase decision, freeing you to focus on running your business.

Please visit the Storage Proven Web site at [ibm.com/totalstorage/proven](http://ibm.com/totalstorage/proven) to view more than one hundred available products and solutions to meet your storage needs.

IBM TotalStorage Solution Centers

More than 140 worldwide IBM TotalStorage Solution Centers can deliver one-stop shopping for storage hardware, software and consulting services. The Solution Centers offer you both a local venue for hands-on testing of IBM storage solutions and a platform for proof-of-concept and benchmarking activities. These centers also work with the leading storage software providers to support a wide variety of choices for interoperability. IBM Business Partners will help you select and implement a solution to help your business succeed in today's dynamic marketplace. Visit: [ibm.com/storage/tssc](http://ibm.com/storage/tssc)

Product	Highlights
<b>Enterprise Storage Server 800</b>	<ul style="list-style-type: none"> <li>Provides enterprise strength reliability and function, SAN-ready disk system</li> <li>Designed to provide high availability, performance, manageability and scalability</li> <li>Host connectivity via SCSI, FC/FICON, or ESCON interfaces to a wide variety of UNIX, Windows, iSeries, and zSeries servers</li> <li>Features state-of-the-art copy services for rapid backup and disaster recovery</li> </ul>
<b>Enterprise Storage Server 750</b>	<ul style="list-style-type: none"> <li>ESS 800 reliability and function at an attractive entry capacity enterprise storage price point</li> <li>Includes ESS 800 comprehensive server support and support for state of the art copy services</li> <li>Design supports non-disruptive upgrade to the ESS 800</li> </ul>
<b>DS8300</b>	<ul style="list-style-type: none"> <li>A new standard in enterprise class functionality with extraordinary performance and up to 192TB of physical capacity</li> <li>Host connectivity via FC/FICON or ESCON interfaces to a wide variety of UNIX, Windows, iSeries, and zSeries servers</li> <li>Top notch storage consolidation system with Storage System LPAR capability</li> <li>Offers FlashCopy and Global and Metro Mirroring functions that are interoperable with the DS6000, ESS 800 and 750</li> <li>Call home and remote support as well as a 4-year warranty</li> </ul>
<b>DS8100</b>	<ul style="list-style-type: none"> <li>A new standard in enterprise class functionality and performance with up to 115TB of physical capacity</li> <li>Host connectivity via FC/FICON or ESCON interfaces to wide variety of UNIX, Windows, iSeries and zSeries servers.</li> <li>Offers FlashCopy and Global and Metro Mirroring functions that are interoperable with the DS6000, ESS 800 and 750</li> <li>Call home and remote support as well as a 4-year warranty</li> </ul>
<b>DS6800</b>	<ul style="list-style-type: none"> <li>Provides enterprise-class disk offering in a modular package at an affordable price</li> <li>Designed to provide host connectivity via FC/FICON to a wide variety of UNIX, Windows, iSeries, and zSeries servers</li> <li>Features interoperability of advanced copy services with ESS 800, ESS 750, and DS8000 series</li> <li>Designed for easy installation and serviceability and includes a 4-year warranty</li> </ul>
<b>DS4500</b>	<ul style="list-style-type: none"> <li>Provides SAN-ready flexible disk storage system for UNIX and Intel processor-based environments</li> <li>Offers high-performance, full fiber solution with 2Gb Fibre Channel Connectivity</li> <li>Supports business continuance with its optional high-availability software and advanced Enhanced Remote Mirroring function</li> <li>Helps protect customer data with its multi-RAID capability and hot-swappable redundant components</li> </ul>
<b>DS4400</b>	<ul style="list-style-type: none"> <li>Provides SAN-ready flexible disk storage system for UNIX and Intel processor-based environments</li> <li>Offers high-performance, full fiber solution with 2Gb Fibre Channel Connectivity</li> <li>Supports business continuance with its high-availability software and advanced Enhanced Remote Mirroring function</li> <li>Helps protect customer data with its multi-RAID capability and hot-swappable redundant components</li> </ul>
<b>DS4300</b>	<ul style="list-style-type: none"> <li>Provides four 2Gb FC host ports to support multipath failover for directly attached UNIX and Intel-based servers</li> <li>Designed to deliver high performance of up to 768MB/sec throughput with turbo option</li> <li>Supports up to 112 fibre disk drives or 16.4TB capacity with Turbo option, 112 SATA disk drives or 28TB capacity with dual base or Turbo option</li> <li>Can help improve service response time with automated alerts from the optional DS4000 Service Alert feature</li> </ul>
<b>DS4100</b>	<ul style="list-style-type: none"> <li>Features SAN ready, Fibre Channel attach, single or dual controller models, entry-level SATA solution to support general use, data archiving, reference data, and near-line storage applications</li> <li>Provides a low cost, entry level solution for UNIX and Intel servers</li> <li>Designed to provide scalability for easy growth (250GB to 28TB)</li> <li>Offers powerful, intuitive storage management tools</li> </ul>
<b>DS400</b>	<ul style="list-style-type: none"> <li>Designed to provide cost-effective, entry-level Fibre Channel storage</li> <li>Designed to support heterogeneous operating environments including Windows, Linux, VMWare and Netware</li> <li>Features easy-to-use IBM ServeRAID manager</li> <li>Feature reliable Ultra320 SCSI drives</li> <li>Designed to scale to 5.8TB physical capacity with EXP400 SCSI Enclosures</li> </ul>
<b>DS300</b>	<ul style="list-style-type: none"> <li>Designed to provide iSCSI host connectivity that leverages standard Ethernet Infrastructure</li> <li>Designed to support heterogeneous operating environments including Windows, Linux and Netware</li> <li>Features easy-to-use IBM ServeRAID manager and reliable Ultra320 SCSI drives</li> <li>Designed to scale to 2TB physical capacity</li> </ul>
<b>EXP Plus 320</b>	<ul style="list-style-type: none"> <li>Provides flexible, scalable and cost-effective SCSI-attach disk storage for RS/6000 and pSeries servers</li> <li>Supports Internet-centric service providers</li> </ul>
<b>7133 Serial Disk System</b>	<ul style="list-style-type: none"> <li>Provides high-throughput, high-density, scalable serial disk storage for UNIX servers</li> <li>Incorporates an architecture that avoids single points of failure and includes high-function 7133 controller</li> <li>Provides concurrent maintenance with redundant power and cooling components</li> <li>Provides flexibility and availability with its multi-RAID data protection options</li> </ul>

1: Linux distribution support varies per product. Refer to product-specific information for current support. This chart reflects IBM's current intentions. Changes may occur without notice. Consult the appropriate Web pages for support details.

2: VolumeCopy, Metro Mirror, Global Copy and Global Mirror requires turbo option

3: Metro Mirror is synchronous replication; Global Mirror is asynchronous replication; Metro/Global Mirror is two- or three-site cascading asynchronous replication; Global Copy is extended distance copying.

## IP Attached Storage Products

	IBM TotalStorage NAS Gateway 500	IBM TotalStorage DR550
<b>Model</b>	5198-001	
<b>Highlights</b>	<ul style="list-style-type: none"> <li>• Installation—Offers installation wizard designed to help simplify installation and setup</li> <li>• Increased access—Is designed to allow IP clients and servers to access SAN devices without each server or client being directly connected by Fibre Channel</li> <li>• Flexibility—Enables cross-platform file sharing (CIFS [Microsoft Windows], NFS [UNIX]) that can help reduce network complexity and expense, and allow data to be shared across the organization</li> <li>• Interoperability—Supports attachment to non-IBM storage via the IBM TotalStorage SAN Volume Controller†</li> <li>• Scalability—Supports nondisruptive capacity increases up to 224TB of direct attached or SAN-attached physical storage</li> <li>• Manageability—Includes integrated system diagnostics and management tools, which are designed to help minimize downtime</li> <li>• High performance—Is optimized for network file serving and storage requirements</li> <li>• Redundancy—Offers redundant fans, power supplies, disk drive, adapters, processors and clustered nodes</li> <li>• Copy services—Provides extensive on-board and out-board disaster recovery data protection features</li> </ul>	<ul style="list-style-type: none"> <li>• Designed as a preconfigured, integrated offering to help store, retrieve, manage, share and secure regulated and nonregulated data in non-erasable and non-rewritable format</li> <li>• Designed to offer automatic provisioning, migration, expiration and archiving capabilities</li> <li>• Supports nondisruptive enterprise scalability of up to 56TB physical capacity</li> <li>• Offers a comprehensive suite of software tools for policy- and event-based data management</li> <li>• Designed to avoid single points of failure</li> </ul>
<b>Scalability</b>	Up to 224TB of SAN-attached physical storage	Single node: 3.5 and 7TB, Dual node: 3.5 7, 14, 28 and 56TB
<b>Nodes</b>	Single- or dual-node configurations Dual-node configuration offers active/active clustering	Single- or dual-node configurations Dual-node configuration offers active/passive clustering
<b>Processors</b>	1.45GHz POWER4+™ processor (orderable as 2-way or 4-way per node)	One 1.5GHz POWER5™ processor per node
<b>Network Protocol Support</b>	NFS v2 and v3 (UNIX and Linux), CIFS (Windows), HTTP, FTP, NTP, SNMP, SMTP	IBM Tivoli Storage Manager for Data Retention application programming interface (API)
<b>Operating System</b>	AIX 5L™ 5.2B	AIX 5.2 ML4
<b>Performance**</b>	276MB/sec CIFS 68,444 I/Os per sec NFS v3	Performance testing not completed at time of publication
<b>PCI Slots Available</b>	6/node	N/A
<b>Network Connectivity</b>	Eight (10/100/1000) Ethernet ports (copper and fiber) for file serving or service management on PCI adapters Eight (2Gbps) Fibre Channel ports for external tape and storage attachment	2 port Gigabit Copper or Fibre Ethernet (upgrades available)
<b>ECC SDRAM Memory (max)</b>	16GB with 2-way processor and 32GB with 4-way processor per node	1GB per node
<b>Data Protection</b>	On-board data protection using snapshots to create copies and snap rollback to restore backup copies of snapped data. Out-board remote mirroring over IP networks or SAN networks to provide copies of data at remote disaster recovery sites	Mirrored OS, RAID-5 for user data
<b>Redundancy/High Availability</b>	Redundant, hot swappable disk bays, power supplies, fans and PCI adapters	HACMP, redundant DS4100 controllers, RDAC driver to provide path failover, RAID
<b>Backup</b>	External tape (SCSI or FC)	External tape (recommended IBM 3592 WORM tape)
<b>RAID Levels</b>	SAN disk dependent	RAID-5
<b>Systems Management</b>	NAS WebSM, SMIT, SNMP v3, NAS CLI	SMIT, DS4000 Storage Manager GUI, SNMP
<b>Storage Management</b>	IBM Tivoli® Storage Resource Manager (ITSRM) agent, IBM Tivoli Storage Manager client and storage agent, IBM Tivoli SAN Manager (ITSANM) agent; additional third-party products are supported†	IBM Tivoli Storage Manager client and storage agent

## SAN Virtualization

Create a tiered storage environment and increase the flexibility within your storage infrastructure by introducing solutions based on IBM TotalStorage virtualization software. Offerings include the IBM TotalStorage SAN File System, the IBM TotalStorage SAN Volume Controller and the IBM TotalStorage SAN Volume Controller for Cisco MDS 9000.

Product	Function and Value	Highlights
<b>IBM TotalStorage SAN File System (SFS)</b>	SAN File System is designed to virtualize and consolidate file systems across Windows, UNIX, and Linux servers and provide a common pool of storage that can be shared across servers. It supports multiple tiers of storage and provides policy based allocation of space at a file level and policy based migration of files between storage pools.	<ul style="list-style-type: none"> <li>• <b>Simplify data management:</b> SFS provides policy-based data management that can help improve file and database management as well as administrator productivity.</li> <li>• <b>Improve data access:</b> SFS is designed to enable secure data sharing between Windows, UNIX, and Linux servers with ease and efficiency, resulting in reduced storage costs and optimized storage resources.</li> <li>• <b>Flexible, on demand operating environment:</b> SFS enables customers to maintain flexibility in their IT environments by virtualizing the relationship between applications and their data. This provides the flexibility to take advantage of technology as it advances, rather than being locked into one specific vendor. Contributes to automation, integration, and support for open standards.</li> <li>• <b>Reduce storage needs:</b> SFS is designed to provide a common pool of file space that can be accessed and used by any server on the SAN File System. SFS supports multiple tiers of storage allowing customers to match the type of storage being used to the business value of the data.</li> <li>• <b>Improve application availability:</b> SFS enables you to move, add, or change the file system capacity without requiring application outages. It also provides a file-based FlashCopy function that can reduce maintenance windows used for taking backups.</li> </ul>
<b>IBM TotalStorage SAN Volume Controller (SVC)</b>	Based on Virtualization technology, the IBM TotalStorage SAN Volume Controller is designed to manage all disk storage as a single resource from a single point to simplify the operation of the environment. It is designed to allow a tiered storage environment to be deployed better than relying on physical disk arrays alone.	<ul style="list-style-type: none"> <li>• <b>Manage storage volumes from a central point:</b> The SVC is designed to enhance the flexibility of your storage environment. It can combine the storage capacity from multiple disk arrays from different suppliers into a single pool of storage which can be managed from a central point.</li> <li>• <b>Create a tiered storage environment:</b> Utilizing virtualization technology, the SVC enables customers to match the cost of the storage to the value of their data. Mission-critical data can be stored on high-performance, highly available Fibre-Channel disks while non-mission-critical data can be stored on serial-ATA disks.</li> <li>• <b>Virtually eliminate downtime related to storage:</b> The SVC enables data migrations, storage software upgrades and changes to the physical storage without impacting host applications.</li> <li>• <b>Improve storage resource utilization:</b> By combining the storage capacity from multiple disk arrays into a single pool, SVC uses existing storage capacity more efficiently, which can defer additional storage purchases to save costs.</li> <li>• <b>A single, cost-effective set of advanced copy services:</b> The SVC can apply copy services across all the managed storage, regardless of the disk array supplier. This capability helps simplify the environment, reduce the costs of implementing disaster recovery solutions and increases the productivity of the personnel.</li> </ul>
<b>IBM TotalStorage SAN Volume Controller for Cisco MDS 9000 Solution</b>	IBM and Cisco combine the SAN Volume Controller storage software with the Caching Services Module from the Cisco MDS 9000 Family of switches and directors to deliver the benefits of the SAN Volume Controller in a switch-based implementation, aiding with both data integration and consolidation of the storage network.	<ul style="list-style-type: none"> <li>• <b>Manage storage volumes from a central point:</b> The SVC storage software can combine the storage capacity from multiple disk arrays from different suppliers into a single pool of storage which can be managed from a central point in the Cisco switched-fabric environment.</li> <li>• <b>Create a tiered storage environment:</b> Utilizing virtualization technology, the SVC for Cisco MDS 9000 solution enables customers to match the cost of the storage to the value of their data. Mission-critical data can be stored on high-performance, highly available Fibre-Channel disks while non-mission-critical data can be stored on serial-ATA disks.</li> <li>• <b>Virtually eliminate downtime related to storage:</b> The SVC storage software enables data migrations, storage software upgrades and changes to the physical storage without impacting host applications.</li> <li>• <b>Improve storage resource utilization:</b> By combining the storage capacity from multiple disk arrays into a single pool, the SVC storage software uses existing storage capacity more efficiently, which can defer additional storage purchases to save costs. And integrating the software into a Cisco switched fabric saves costs even more by reducing the space requirements within the data center.</li> <li>• <b>A single, cost-effective set of advanced copy services:</b> The SVC storage software can apply copy services across all the managed storage, regardless of the disk array supplier. This helps simplify the environment, reduce the costs of implementing disaster recovery solutions and increases the productivity of the personnel.</li> </ul>

## IBM TotalStorage Expert Family

Adds value to the storage subsystem solution by providing information for better management.

Product	Function and Value
<b>IBM TotalStorage ESS Expert</b>	Provides storage administrators with the capability to manage the performance of the IBM Enterprise Storage Server; this innovative tool furnishes storage asset and capacity management capabilities to centrally manage Enterprise Storage Servers located across the enterprise
<b>IBM TotalStorage ETL Expert</b>	Provides a high-performance monitoring tool to help simplify the management of IBM tape subsystems that include the IBM TotalStorage Enterprise Tape Library, Virtual Tape Server and Peer-to-Peer Virtual Tape Server
<b>IBM TotalStorage Management Toolkit</b>	Offers a collection of products designed to provide a comprehensive menu of solutions to meet the storage management requirements of z/OS customers
<b>IBM TotalStorage XRC Performance Monitor</b>	Provides the ability to monitor and evaluate the performance of a running XRC configuration; the monitor function provides information at the real-time, historic and summary levels

## DFSMS Family

Provides automated and central storage management in the z/OS environment

Product	Function and Value
<b>DFSMSdfp™</b>	Provides data access, program and device management functions that furnish effective management of active data
<b>DFSMSdss™</b>	Provides data movement, copy, backup and space management functions
<b>DFSMShsm™</b>	Provides backup, recovery, migration and space management functions that furnish effective management of inactive data
<b>DFSMSrmm™</b>	Provides a policy-driven solution for the management of removable media, such as tape cartridges and reels
<b>DFSORT™</b>	Provides a solution for faster and easier data sorting, reporting and analysis
<b>DFSMSivs</b>	Enables batch jobs and CICS® (Customer Information Control Systems) online transactions to update shared VSAM data sets concurrently

## IBM Tivoli Storage Manager

### Function and Value

IBM Tivoli Storage Manager is designed to provide protection of your 24x7 applications and key data in the event of hardware, software or network failures. It offers move-and-store techniques and policy-based automation, which are designed to work together to help increase data and application protection, decrease disaster recovery time and lower storage administration costs. It manages inactive data, helping you match the value of the data to the most cost-effective storage management practices. Tivoli Storage Manager is designed to scale easily to protect hundreds of computers running a dozen operating systems ranging from laptops to mainframes and connected together via the Internet, WANs, LANs or SANs. Tivoli Storage Manager also offers open, easy-to-use APIs designed to enable ISVs to more easily adapt their solutions to IBM software, helping to allow joint customers to customize, better secure and extend the functionality of their storage environment.

### Highlights

- Designed to protect valuable data in the most cost-effective manner
- Designed to archive inactive data to help reduce costs
- Designed to help ensure continuity and recovery

## IBM TotalStorage Productivity Center

Product	Function and Value	Highlights
<b>TotalStorage Productivity Center for Disk (Formerly known as IBM TotalStorage Multiple Device Manager)</b>	In a pooled or virtualized SAN environment, multiple devices work together to create a storage solution. IBM TotalStorage Productivity Center for Disk is designed to provide integrated administration, optimization and replication features for these virtualization solutions.	<ul style="list-style-type: none"> <li>• Designed to help reduce the complexity and cost of storage management while improving data availability</li> <li>• Offers centralized, open standards-based management of storage devices</li> <li>• Designed to help enhance storage administrator productivity</li> <li>• Offers proactive management of storage devices</li> <li>• Designed to monitor and automate replication operations across storage devices</li> </ul>
<b>TotalStorage Productivity Center for Replication (Formerly known as IBM TotalStorage MDM Replication Manager)</b>	TotalStorage Productivity Center For Replication is designed to simplify and automate the configuration of your replication environment allowing for more effective Peer-to-Peer Remote Copy (PPRC) and IBM FlashCopy management. It is also designed to monitor copy operations across devices to support a replication environment.	<ul style="list-style-type: none"> <li>• Automates the configuration of your ESS advanced copy services (FlashCopy and PPRC)</li> <li>• Monitors and manages the ESS copy operations to ensure successful completion from your source volumes to your disaster recovery volumes bsystems</li> </ul>
<b>IBM TotalStorage Productivity Center for Data (Formerly known as IBM Tivoli Storage Resource Manager)</b>	IBM TotalStorage Productivity Center for Data is an intelligent console for storage environments that provide a set of policy-driven automated tools for managing storage capacity, availability, events, performance and assets, including DAS, NAS and SAN technologies.	<ul style="list-style-type: none"> <li>• Designed to help leverage and optimize existing storage resources and perform storage management with a high level of control</li> <li>• Designed to help maximize storage utilization</li> <li>• Designed to be able to manage more storage with the same staff</li> </ul>
<b>IBM TotalStorage Productivity Center for Fabric (formerly known as IBM Tivoli SAN Manager)</b>	IBM TotalStorage Productivity Center for Fabric is designed to help automate the management of heterogeneous storage networks and works with a broad range of devices, so businesses can leverage and better use existing technology investments. It is designed to provide comprehensive management of physical and logical configurations for multi-vendor SANs with automatic resource discovery, event monitoring and alerting, zone control and SAN error-prediction capabilities.	<ul style="list-style-type: none"> <li>• Designed to help predict storage network failures before they happen, enabling preventative maintenance</li> <li>• Designed to help accelerate problem isolation when failures occur</li> <li>• Designed to report on storage network performance</li> <li>• Designed to create a single point of control, administration and security for the management of heterogeneous storage networks</li> </ul>

### IBM Global Services for Storage and Storage Networking

Data Storage Services from IBM can help companies achieve their business objectives by creating cost-effective data storage solutions that address the requirements of key business applications. These solutions can support multiple platforms and product vendors, helping to provide enhanced protection for critical business data, increased asset utilization, availability and reliability levels with reduced management costs.

IBM Global Services, as the leading data storage services provider, brings best practices from its thousands of customer engagements to work with your employees to integrate new solutions and technology with your business and IT needs. IBM offers a comprehensive portfolio of data storage services including:

#### Assess

- Analysis of enterprise information needs and environment
- Defined enterprise-wide storage strategies
- Quantified business benefits

#### Plan

- Backup/restore and business continuity planning
- Performance and capacity planning
- Enterprise security architecture
- Storage migration and consolidation

#### Design

- Networked storage architecture design
- SAN configuration and integration services
- Proof of concept, validation and certification

#### Implement

- Implementation, testing and migration services
- Education and training
- Installation, relocation, cabling and site preparation

#### Run

- Business and application recovery services
- Systems monitoring and management
- Managed Storage Services

IBM Global Services has a track record in offering services for open and mainframe storage, data migration, installation and support services for IBM and non-IBM environments. Some examples are:

- IBM Storage Strategy Assessment assists with the vision and strategy, assessment, architecture and conceptual designs to help customers optimize their storage infrastructure to new architectures.
- IBM Planning Services for 3494 Automated Tape Library and Virtual Tape Server can help improve tape storage management and gain control of an often expanding library of tapes.
- IBM Operational Support Services for Tivoli® Storage Manager assists customers in the planning and implementation of storage management software.
- IBM Managed Storage Services offer scalable, cost-effective storage capacity, management and backup/restore services on a usage basis.

More information about IBM storage services can be found at [ibm.com/services/storage](http://ibm.com/services/storage).

### IBM Global Financing

IBM Global Financing offers competitive financing to credit-qualified customers and IBM Business Partners to assist them in acquiring IT solutions. Our offerings include financing for IT acquisition—including hardware, software and services, both from IBM and other manufacturers or vendors—as well as commercial financing (revolving lines of credit, term loans, acquisition facilities and inventory-financing credit lines) for IBM Business Partners. Offerings (for all customer segments: small, medium and large enterprise), rates, terms and availability may vary by country. Contact your local IBM Global Financing organization or visit the Web at [ibm.com/financing](http://ibm.com/financing).

IBM Global Financing offerings are provided through IBM Credit Corporation in the United States and IBM Canada Ltd. in Canada to qualified commercial and government customers. Rates are based on a customer's credit rating, financing terms, offering type, equipment type and options, and may vary by country. Other restrictions may apply. Rates and offerings are subject to change, extension or withdrawal without notice.

IBM hardware products are manufactured from new parts, or new and used parts. In some cases, the hardware product may not be new and may have been previously installed. Regardless, IBM warranty terms apply.

This document could include technical inaccuracies or typographical errors. IBM may make changes, improvements, or alterations to the products, programs and services described in this document, including termination of such products, programs and services, at any time and without notice. Any statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only. The information contained in this document is current as of the initial date of publication only and is subject to change without notice. IBM shall have no responsibility to update such information.

IBM is not responsible for the performance or interoperability of any non-IBM products discussed herein. Performance data for IBM and non-IBM products and services contained in this document was derived under specific operating and environmental conditions. The actual results obtained by any party implementing such products or services will depend on a large number of factors specific to such party's operating environment and may vary significantly. IBM makes no representation that these results can be expected or obtained in any implementation of any such products or services.

MB, GB and TB equal 1,000,000, 1,000,000,000 and 1,000,000,000,000 bytes, respectively, where referring to storage capacity. Actual storage capacity will vary based upon many factors and may be less than stated. Some numbers given for storage capacities give capacity in native mode followed by capacity using data compression technology.

THE INFORMATION IN THIS DOCUMENT IS PROVIDED "AS-IS" WITHOUT ANY WARRANTY, EITHER EXPRESSED OR IMPLIED. IBM EXPRESSLY DISCLAIMS ANY WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR INFRINGEMENT. IBM products are warranted according to the terms and conditions of the agreements (e.g., IBM Customer Agreement, Statement of Limited Warranty, International Program License Agreement, etc.) under which they are provided.

References in this document to IBM products, programs or services does not imply that IBM intends to make such products, programs or services available in all countries in which IBM operates or does business. Any reference to an IBM program or product in this document is not intended to state or imply that only that program may be used. Any functionally equivalent program or product, that does not infringe IBM's intellectual property rights, may be used instead. It is the user's responsibility to evaluate and verify the operation of any non-IBM product, program or service.
