Intel is a registered trademark of Intel Corporation.

Pentium Dual-Core, Celeron Dual-Core, Core 2 Duo, Core 2 Quad, Celeron, and combinations thereof, are trademarks of Intel Corporation.

Other brand and product names are trademarks and/or registered trademarks of their respective holders.

Conventions

The following conventions are used in this manual:

SCREEN MESSAGES	Denotes actual messages that appear on screen.
NOTE	Gives additional information related to the current topic.
WARNING	Alerts you to any physical risk or system damage that might result from doing or not doing specific actions.
CAUTION	Gives precautionary measures to avoid possible hardware or software problems.
IMPORTANT	Reminds you to do specific actions relevant to the accomplishment of procedures.

Service Guide Coverage

This Service Guide provides you with all technical information relating to the BASIC CONFIGURATION decided for Acer's "global" product offering. To better fit local market requirements and enhance product competitiveness, your regional office MAY have decided to extend the functionality of a machine (e.g. add-on card, modem, or extra memory capability). These LOCALIZED FEATURES will NOT be covered in this generic service guide. In such cases, please contact your regional offices or the responsible personnel/channel to provide you with further technical details.

FRU Information

Please note WHEN ORDERING FRU PARTS, that you should check the most up-to-date information available on your regional web or channel. If, for whatever reason, a part number change is made, it will not be noted in the printed Service Guide. For ACER-AUTHORIZED SERVICE PROVIDERS, your Acer office may have a DIFFERENT part number code to those given in the FRU list of this printed Service Guide. You MUST use the list provided by your regional Acer office to order FRU parts for repair and service of customer machines.

System Tour

Features

Below is a brief summary of the computer's many feature:

NOTE: The features listed in this section is for your reference only. The exact configuration of the system depends on the model purchased.

Operating System

- Microsoft Windows 7 Home Premium 64bit
- Microsoft Windows 7 Home Premium 32bit
- Microsoft Window 7 Home Basic 64bit
- Microsoft Windows 7 Home Basic 32bit
- Microsoft Windows 7 Starter 32bit
- Microsoft Windows 7 Professional 32bit
- Microsoft Windows XP Professional 32bit
- Free DOS
- Linpus XWindows 9.5
- Lipus Linux cons

Processor

- Socket Type: AMD Socket AM3
- Socket Quantity: 1
- Processor Type:
 - Support AM3 6-core Thuban CPU (140W)

Chipset

- NB: RS880P
- SB: AMD SB810

PCB

- 4 Layer uATX form factor 9.6in X 9.6in (24.38cm X 24.38cm)

Memory subsystem

- Socket Type: DDR III Un-buffered DIMM connector
- Socket Quantity: 4
 - 2 channels, 2 DIMMs per channel.
 - Different colors for DIMM 0 and DIMM 1
- 1GB/2GB/4GB DDR3 1.5V 1333/1066 Un-buffered Non-ECC DIMM support
- 1 GB to 16GB Max memory support
- Design Criteria:
 - Must meet Intel Lynnfield and Clarkdale Chipset platform design guide
 - Support 1.5V DIMM

-
- Dual channel should be enabled always when plug-in 2 same memory size DDRIII memory module

Hard disk drive

- Support up to two SATA ports
- 3.5"
- Capacity and models are listed on AVLC

Optical disk drive

- Support one SATA 5.25" standard ODD
- Support DVD-ROM, DVD-SuperMulti, BD-combo, BD-rewrite
- Maximum ODD depth to 185mm with bezel
- Models are listed on AVLC

Graphics card

- No mechanical restriction to support for double slot, full length graphics cards in the single PCIe X16 slot

Vedio

- AMD RS880P on die graphic solution
- Meet Microsoft Vista Premium graphic requirement
- 1 HDMI port and 1 D-sub port for Consumer model
- 1 D-sub port and 1 DVI-D port for Commercial model
- Need to measure VGA follow Acer SOP

Audio

- Chip : HD audio codec ALC662-VC HD codec 5.1
- Connectors support:
 - Rear 3 jack follow HD audio definition (ALC662-VC)
 - Audio jacks color coding: should meet Microsoft Windows Logo Program Device Requirements: Audio-0002
 - 1 S/PDIF-out header (1*4)
 - 1 front panel audio header (2*5)
 - 1 internal speaker header (2*4)
 - Add HD de-pop CKT

Serial ATA controller

- Slot Type: SATA connector
- Six SATA ports:
 - 4 for HDD
 - 2 for ODD
- Storage Type support:
 - 1.HDD : Support RAID 0/1/5/10
 - 2.Blue Ray ODD
 - 3.AHCI mode supported for internal SATA port

LAN

- Controller: Realtek 8111E Gigabit Ethernet controller
- RJ-45 Back panel port with Link/Activity LEDs

USB ports

- Ports Quantity: 14 (should reserve more header for front DB)
 - 6 ports for rear port
 - On-board: 4 2*5 headers
 - 4 ports for front daughter board
 - 2 ports for internal card reader
 - 2 ports for Daughter board (Aspire M5400/M3400 only)
- Connector Pin: standard Intel FPIO pin definition

Extension slot

- Support one PCIe x 16 slot
- Support two PCIe x 1 slots
- Support one PCI slot

Rear I/O connectors

- 1 PS/2 Keyboard port
- 1 PS/2 Mouse port
- 1 HDMI port (need certification) for consumer models
- 1 D-sub port
- 1 DVI-D port for commercial models
- 6 USB ports
- 1 RJ45 LAN port
- 1 Com port for commercial models
- 5.1 channel phone jack (3 audio jacks)

On-board connectors

- 1 AM3 CPU socket
- 4 DDR3 memory sockets
- 1 PCI Express x16 slot
- 2 PCI Express x1 slot
- 1 PCI slots
- 6 SATA2 connectors
- 4 2x5-pin Intel FPIO specification USB pin connectors (follow Intel FPIO Standard Specification)
- 1 2x5-pin Intel FPIO spec Microphone In/ Headphone Out pin connector
- 1 1x4 S/PDIF out header (for ALC662 SKU)
- 1 3-pin CPU fan connector (co-lay with 4-pin CPU fan connector)
- 1 3-pin system fan connector with linear circuit
- 1 24-pin + 4-pin ATX interface PS3/PS2 SPS connector
- 1 2x7-pin front panel I/O header
- 1 Jumper for clear CMOS
- 1 on board buzzer

-
- 2 reserved 2-pin GPIO connector

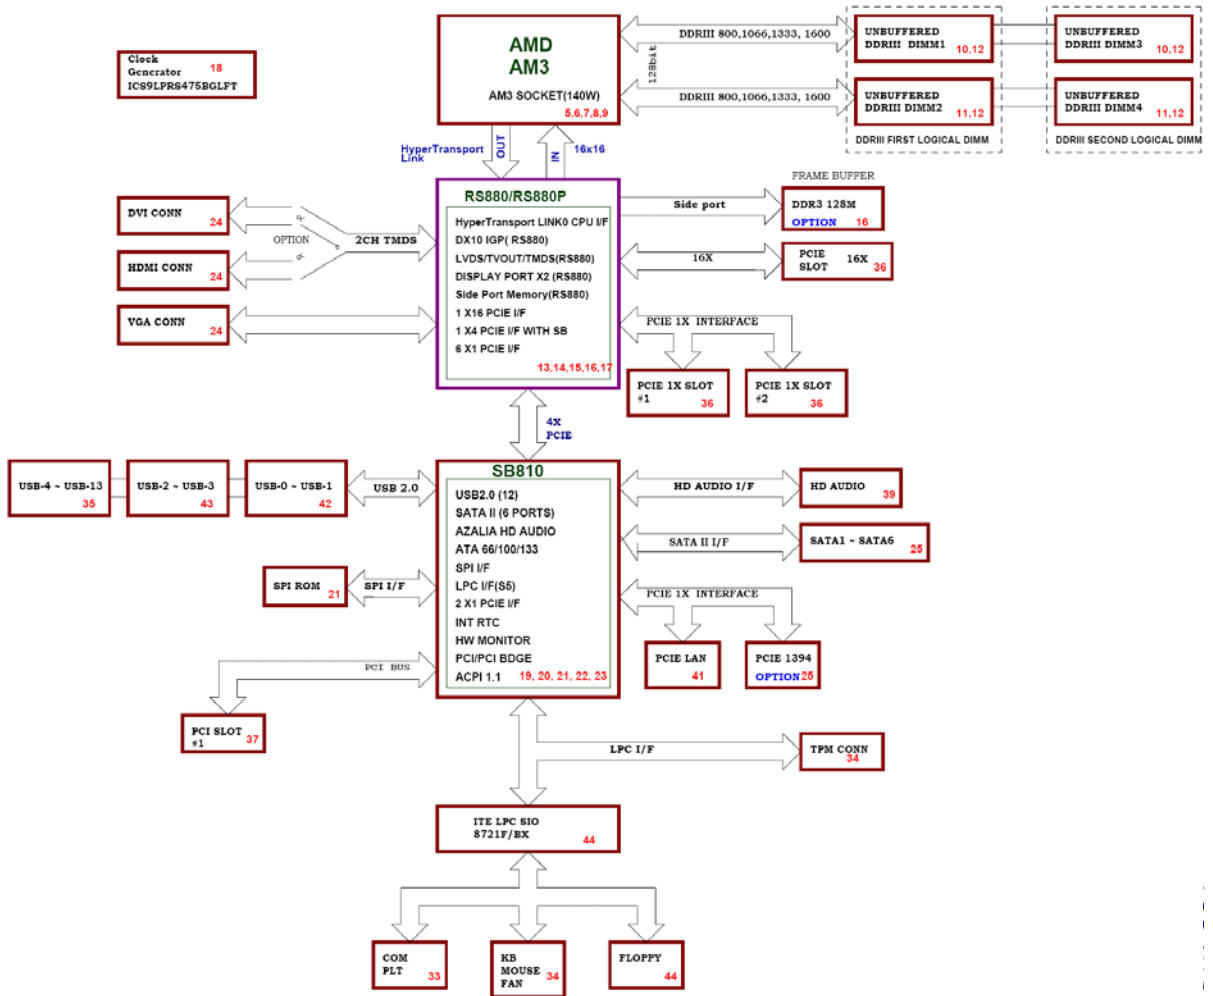

System BIOS

- Size: 8Mbit
- AMI Kernel with Acer skin/copyright

Power supply

- 300W/500W in stable mode (Acer Assign System Power Unit)
- Support 82+ PSU for EnergyStar 5.0 complaint
- Design for RS880P+SB810 series chipset compatible system
- Voltage design should be covered +5V, +3.3V, +12V, +5VSB, -12V (attention to 12V output capability)
- Demand for both PFC/Non-PFC solutions (two different quotations are needed)
- PS2 style

Block Diagram

System Components

This section is a virtual tour of the system's interior and exterior components.

Front Panel

No.	Component
1	USB 2.0 ports
2	Acer logo
3	Optical drive button
4	Optical drive button (Removable HDD bay for AM351 bezel)
5	16 in 1 Card Reader
6	Power button
7	Headphone/Speaker-out/line-out jack
8	Microphone-in jack

Rear Panel

No.	Component
1	Power connector
2	PS2 keyboard port
3	HDMI port
4	VGA port
5	USB 2.0 ports
6	Mic-in
7	Line-out
8	Expansion slot (graphics card and TV tuner card and Mode card)
9	Line-in
10	USB 2.0 ports
11	LAN connector
12	System FAN
13	PS2 mouse port
14	Fan aperture

Hardware Specifications and Configurations

Processor

Item	Specification
Processor Type	Support AM3 6-core Thuban CPU (140W)
Socket Type	AMD Socket AM3
Minimum operating speed	0 MHz (If Stop CPU Clock in Sleep State in BIOS Setup is set to Enabled.)

BIOS

Item	Specification
BIOS code programmer	AMI Kernel with Acer skin
BIOS version	P01-A0
BIOS ROM type	SPI ROM
BIOS ROM size	8Mb
Support protocol	SMBIOS(DMI)2.4/DMI2.0
Device Boot Support	Support BBS spec 1st priority: HDD 2nd priority: CD-ROM 3th priority: LAN 4th priority: USB device
Support to LS-120 drive	YES
Support to BIOS boot block feature	YES

IOS Hotkey List

Hotkey	Function	Description
Del	Enter BIOS Setup Utility	Press while the system is booting to enter BIOS Setup Utility.

Main Board Major Chips

Item	Specification
North Bridge	RS880P
South Bridge	SB810
Audio controller	ALC662-VC
LAN controller	Realtek 8111E Gigabit Ethernet controller
HDD controller	RS880P

Memory Combinations

Slot	Memory	Total Memory
Slot 1	1MB,2GB,4GB	1G ~4GB
Slot 2	1MB,2GB,4GB	1G ~4GB
Slot 3	1MB,2GB,4GB	1G ~4GB
Slot 4	1MB,2GB,4GB	1G ~4GB
Maximum System Memory Supported		1G~16GB

System Memory

Item	Specification
Memory slot number	4 slot
Support Memory size per socket	1GB/2GB/4GB
Support memory type	DDRIII
Support memory interface	DDRIII 1066/1333MHz
Support memory voltage	1.5V
Support memory module package	240-pin DDRIII
Support to parity check feature	Yes
Support to error correction code (ECC) feature	No
Memory module combinations	You can install memory modules in any combination as long as they match the above specifications.

Audio Interface

Item	Specification
Audio controller	ALC662-VC
Audio channel	codec 5.1
Audio function control	Enable/disable by BIOS Setup
Mono or stereo	Stereo
Compatibility	Support host audio controller from the Intel ICH series chipset, and also from any other HDA compatible audio controller. With EAX/Direct Sound 3D/I3DL2/A3D compatibility, and excellent software utilities like environment sound emulation, multiple bands of software equalizer and dynamic range control, optional Dolby, Digital Live, DTS CONNECT, and Dolby Home Theater programs, provides an excellent home entertainment package and game experience for PC users.
Sampling rate	192 KHz (max.)
Microphone/Headphone jack	Supported

SATA Interface

Item	Specification
SATA controller	RS880P
Number of SATA channel	SATA X 6
Support mode	RAID/AHCI/IDE mode option

USB Port

Item	Specification
Universal HCI	USB 2.0/1.1
USB Class	Support legacy keyboard for legacy mode
USB Connectors Quantity	6 back real ports 4 ports for front daughter board 4 ports reserved

Environmental Requirements

Item	Specification
Temperature	
Operating	+5°C ~ +35°C
Non-operating	-20 ~ +60°C (Storage package)
Humidity	
Operating	15% to 80% RH
Non-operating	10% to 90% RH
Vibration	
Operating (unpacked)	5 ~ 500 Hz: 2.20g RMS random, 10 minutes per axis in all 3 axes. 5 ~500 Hz: 1.09g RMS random, 1 hour per axis in all 3 axes.

Power Management

Devices	S1	S3	S4	S5
Power Button	V	V	V	V
USB Keyboard/Mouse	V	V	N/A	N/A
PME	Disabled	Disabled	Disabled	Disabled
RCT	Disabled	Disabled	Disabled	Disabled
WOR	Disabled	Disabled	Disabled	Disabled

- Devices wake up from S3 should be less than.
- Devices wake up from S5 should be less than 10 seconds.

Power Management Function(ACPI support function)

Device Standby Mode

- Independent power management timer for hard disk drive devices(0-15 minutes,time step=1minute).
- Hard Disk drive goes into Standby mode(for ATA standard interface).
- Disable V-sync to control the VESA DPMS monitor.
- Resume method:device activated (keyboard for DOS, keyboard &mouse for Windows).
- Resume recovery time 3-5sec

Global Standby Mode

- Global power management timer(2-120minutes,time step=10minute).
- Hard disk drive goes into Standby mode(for ATA standard interface).
- Disable H-sync and V-sync signals to control the VESA DPMS monitor.
- Resume method: Resume to original state by pushing external switch Button,modem ring in,keyboard an mouse for APM mode.
- Resume recovery time :7-10sec

Suspend Mode

- Independent power management timer(2-120minutes,time step=10minute)or pushing extern switch button.
- CPU goes into SMM
- CPU asserts STPCLK# and goes into the Stop Grant State.
- LED on panel turns amber colour.
- Hard disk drive goes into SLEEP mode (for ATA standard interface).
- Disable H-sync and V-sync signals to control the VESA DPMS monitor.
- Ultra I/O and VGA chip go into power saving mode.
- Resume method: Resume to original state by pushing external switch Button,modem ring in,keyboard an mouse for APM mode
- Return to original state by pushing external switch button,modem ring in and USB keyboard for ACPI mode.

ACPI

- ACPI specification 1.0b
- S0,S1,S2 and S5 sleep state support.
- On board device power management support.
- On board device configuration support.

System Utilities

CMOS Setup Utility

CMOS setup is a hardware configuration program built into the system ROM, called the complementary metal-oxide semiconductor (CMOS) Setup Utility. Since most systems are already properly configured and optimized, there is no need to run this utility. You will need to run this utility under the following conditions.

- When changing the system configuration settings
- When redefining the communication ports to prevent any conflicts
- When modifying the power management configuration
- When changing the password or making other changes to the security setup
- When a configuration error is detected by the system and you are prompted ("Run Setup" message) to make changes to the CMOS setup

NOTE: If you repeatedly receive Run Setup messages, the battery may be bad. In this case, the system cannot retain configuration values in CMOS. Ask a qualified technician for assistance.

CMOS setup loads the configuration values in a battery-backed nonvolatile memory called CMOS RAM. This memory area is not part of the system RAM which allows configuration data to be retained when power is turned off.

Before you run the *CMOS Setup Utility*, make sure that you have saved all open files. The system reboots immediately after you close the Setup.

NOTE: *CMOS Setup Utility* will be simply referred to as "BIOS", "Setup", or "Setup utility" in this guide.

The screenshots used in this guide display default system values. These values may not be the same those found in your system.

Entering CMOS setup

1. Turn on the server and the monitor.

If the server is already turned on, close all open applications, then restart the server.

2. During POST, press **Delete**.

If you fail to press **Delete** before POST is completed, you will need to restart the server.

The Setup Main menu will be displayed showing the Setup's menu bar. Use the left and right arrow keys to move between selections on the menu bar.

Navigating Through the Setup Utility

Use the following keys to move around the Setup utility.

- **Left** and **Right** arrow keys – Move between selections on the menu bar.
- **Up** and **Down** arrow keys – Move the cursor to the field you want.
- **PgUp** and **PgDn** keys – Move the cursor to the previous and next page of a multiple page menu.
- **Home** – Move the cursor to the first page of a multiple page menu.
- **End** – Move the cursor to the last page of a multiple page menu.
- **+** and **-** keys – Select a value for the currently selected field (only if it is user-configurable). Press these keys repeatedly to display each possible entry, or the **Enter** key to choose from a pop-up menu.

NOTE: Grayed-out fields are not user-configurable.

- **Enter** key – Display a submenu screen.

NOTE: Availability of submenu screen is indicated by a (>).

- **Esc** – If you press this key:
 - On one of the primary menu screens, the Exit menu displays.
 - On a submenu screen, the previous screen displays.
 - When you are making selections from a pop-up menu, closes the pop-up without making a selection.
- **F1** – Display the General Help panel.
- **F6** – Press to load optimized default system values.
- **F7** – Press to load fail-safe default system values.
- **F10** – Save changes made the Setup and close the utility.

Setup Utility Menus

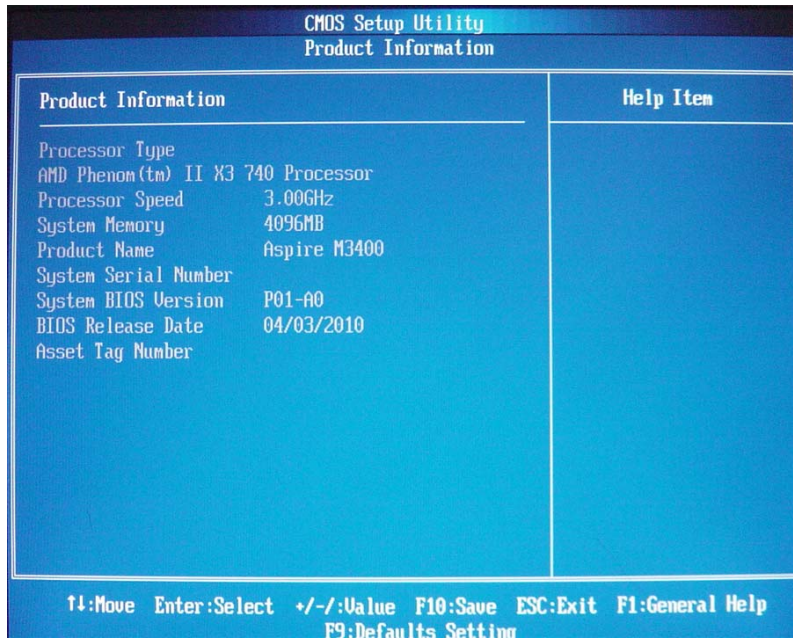

The Setup Main menu includes the following main setup categories.

Parameter	Description
Product Information	This page shows the relevant information of the main board
Standard CMOS Features	This setup page includes all the items in standard compatible BIOS
Advanced BIOS Features	This setup page includes all the items of Award special enhanced features
Advanced Chipset Features	This setup page includes all advanced chipset features
Integrated Peripherals	This setup page includes all onboard peripherals
Power Management Setup	This setup page includes all the items of Green function features
PC Health Status	This setup page is the System auto detect Temperature, voltage, and fan speed
Frequency/Voltage Control	This setup page is the System Frequency setup
BIOS Security Features	Change, set or disable password. It allows you to limit access to the System
Load Default Setting	Load Default Setting indicates the value of the system parameters which the system would be in best performance configuration
Save & Exit Setup	Save CMOS value settings to CMOS and exit setup
Exit Without Saving	Abandon all CMOS value changes and exit setup

In the descriptive table following each of the menu screenshots, settings in **boldface** are the default and suggested settings.

Product Information

The Product Information menu displays basic information about the system. These entries are for your reference only and are not user-configurable.

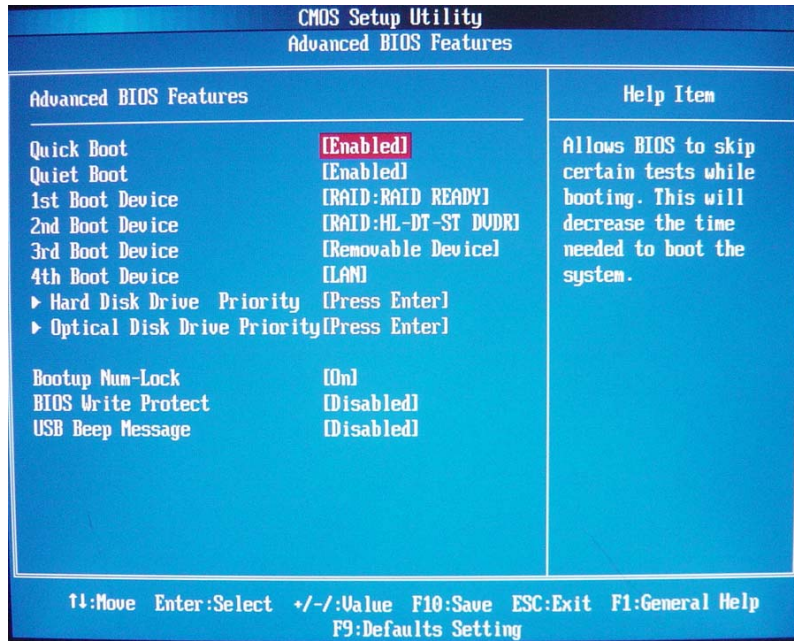

Parameter	Description
Processor Type	Type of CPU installed on the system.
Processor Speed	Speed of the CPU installed on the system.
System Memory	Total size of system memory installed on the system.
Product Name	Product name of the system.
System Serial Number	Serial number of the system.
System BIOS Version	Version number of the BIOS setup utility.
BIOS Release Date	Date when the BIOS setup utility was released
Asset Tag Number	Asset tag number of this system.

Standard CMOS Features

Parameter	Description	Option
System Date	Set the date following the weekday-month-day-year format.	
System Time	Set the system time following the hour-minute-second format.	
Halt On	Determines whether the system will stop for an error during the POST.	All, But Keyboard No Errors All Errors

Advanced BIOS Feature

Parameter	Description	Option
Quick Boot	Allows you to decrease the time it takes to boot the computer by shortening or skipping certain standard booting process.	Enabled Disabled
Quiet Boot	When enabled, the BIOS splash screen displays during startup. When disabled, the diagnostic screen displays during startup.	Enabled Disabled
1st/2nd/3rd/4th Boot Device	Specifies the boot order from the available devices.	Hard Disk CD^DVD Removable Device LAN
Hard Disk Drive Priority	Press Enter to access the Hard Disk Drive Priority submenu and specify the boot device priority sequence from available hard drives.	
Optical Disk Drives Priority	Press Enter to access the Optical Disk Drive Priority submenu and specify the boot device priority sequence from available CD/DVD drives.	
Removable Device Priority	Press Enter to access the Removable Device Priority submenu and specify the boot device priority sequence from available removable drives.	
Bootup Num-Lock	Selects power on state for Num Lock.	On Off
USB Beep Message	Enables or disables BIOS to display error beeps or messages during USB device enumeration.	Disabled Enabled

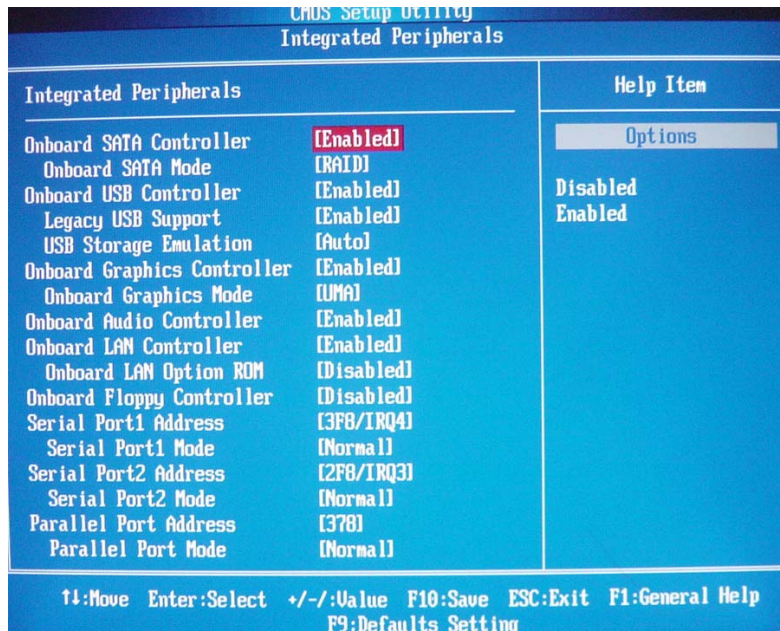

Advanced Chipset Features

Advanced Chipset Settings		Help Item
AMD Cool'n'Quiet	[Enabled]	Enable/disable the generation of ACPI _PPC, _PSS, and _PCT objects.
AMD-V	[Enabled]	
ASF	[Enabled]	
Primary Video	[Auto]	
UMA Frame Buffer Size	[Auto]	
Surround View	[Disabled]	

↑↓:Move Enter:Select +/-:Value F10:Save ESC:Exit F1:General Help
F9:Defaults Setting

Parameter	Description	Option
AMD Cool'n' Quiet	When enabled, this feature allows the OS to reduce power consumption. When disabled, the system operates at maximum CPU speed.	Enabled Disabled
AMD-V	Enables or disables the Virtualization Technology (VT) availability. If enabled, a virtual machine manager (VMM) can utilize the additional hardware virtualization capabilities provided by this technology. Note: A full reset is required to change the setting.	Enabled Disabled
ASF	Enables or disables ASF	Enabled Disabled
Primary Video	Select a Video memory size	Auto
UMA Frame buffer Size	Select a Frame buffe size	Auto
Surround view	Enables or disables Surrande view	Enabled Disabled

Integrated Peripherals

Parameter	Description	Option
Onboard SATA Controller	Enables or disables the onboard SATA controller.	Enabled Disabled
Onboard SATA Mode	Select an operating mode for the onboard SATA.	RAID Native IDE
Onboard USB Controller	Enables or disables the onboard USB controller.	Enabled Disabled
Legacy USB Support	Enables or disables support for legacy USB devices.	Enabled Disabled
USB Storage Emulation	Enables or disables support for legacy USB devices.	Enabled Disabled
Onboard Graphics Controller	Enables or disables the onboard USB controller.	Enabled Disabled
Onboard Graphics Mode	select a mode of the onboard graphics	UMA
Onboard Audio Controller	Enables or disables the onboard audio controller.	Enabled Disabled
Onboard LAN Controller	Enables or disables the onboard LAN controller.	Enabled Disabled
Onboard LAN Option ROM	Enables or disables the load of embedded option ROM for onboard network controller.	Enabled Disabled
Onboard Floppy Controller	Enables or disables the onboard Floppy controller.	Enabled Disabled
Serial Port1 Address	select a port base on address	3F8/IRQ4
Serial Port1 Mode	select the mode	Normal
Serial Port2 Address	select a port base on address	2F8/IRQ3
Serial Port2 Mode	select the mode	Normal
Parallel Port Address	select a port base on address	378
Parallel Port Mode	select the mode	Normal

Power Management Setup

Parameter	Description	Option
ACPI Suspend Mode	Select an ACPI state.	S3 (STR) S1 (POS)
Deep power off mode	Select the Deep power off Mode	Enabled Disabled
Power On by RTC Alarm	Enables or Disables to wake up the system by RTC Alarm Function	Enabled Disabled
Power On by PCIE Devices	Enables or disables to wake up the system from a power saving mode through an event on PCI Express device.	Enabled Disabled
Power On by PCI Devices	Enables or disables to wake up the system from a power saving mode through an event on PCI device.	Enabled Disabled
Power On by Modem Ring	Enables or disables to wake up the system from a power saving mode through Modem Ring.	Enabled Disabled
Wake Up by PS/2 KB/ Mouse	Enables or disables to wake up the system from a power saving mode using a PS2 keyboard or mouse.	Enabled Disabled
Wake Up by USB KB/ Mouse	If enabled, press any key or click the mouse will wake system from S1/ S3 state.	Enabled Disabled
Restore On AC Power Loss	Enables or disables the system to reboot after a power failure or interrupt occurs.	Power Off Power On Last State

PC Health Status

PC Health Status		Help Item
CPU Temperature	:40°C/104°F	System will shutdown when System temperature higher than the item setting value
System Temperature	:46°C/114°F	
CPU Fan Speed	:1700 RPM	
System Fan Speed	:N/A	
CPU Core	:1.308 V	
+1.2V	:1.212 V	
+3.30V	:3.384 V	
+5.00V	:4.957 V	
+12.0V	:12.096 V	
5USB	:5.036 V	
VBAT	:3.408 V	
System Shutdown Temperature	Disabled	
CPU Shutdown Temperature	Disabled	
Smart Fan	Enabled	

↑↓:Move Enter:Select +/-:Value F10:Save ESC:Exit F1:General Help
F9:Defaults Setting

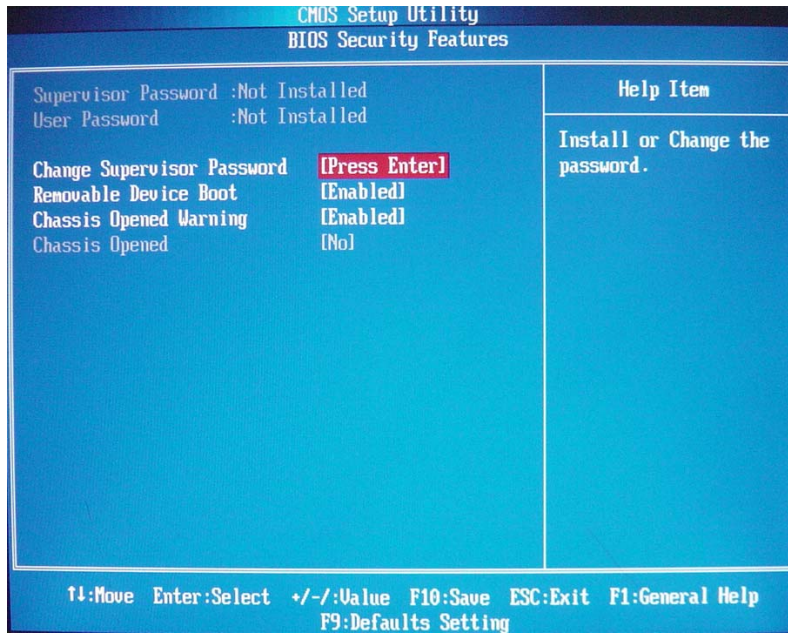

Parameter	Description	Option
system Shutdown Temperature	Select the system Shutdown Temperature	Enabled Disabled
CPU Shutdown Temperature	Select the system Shutdown Temperature	Enable Disabled
Smart FAN	Enables or disables the smart system fan control function.	Enabled Disabled

Frequency/Voltage Control

Parameter	Description	Option
Spread Spectrum	Enables or disables the reduction of the mainboard's EMI. Note: Remember to disable the Spread Spectrum feature if you are overclocking. A slight jitter can introduce a temporary boost in clock speed causing the overclocked processor to lock up.	Enabled Disabled

BIOS Security Features

Parameter	Description
Supervisor Password	Indicates the status of the supervisor password.
User Password	Indicates the status of the user password.
Change Supervisor Password	Supervisor password prevents unauthorized access to the BIOS Setup Utility. Press Enter to change the Supervisor password.

Setting a supervisor password

- Use the up/down arrow keys to select Change Supervisor Password menu then press **Enter**.
A password box will appear.
- Type a password then press **Enter**.
The password may consist up to six alphanumeric characters (A-Z, a-z, 0-9)
- Retype the password to verify the first entry then press **Enter** again.
- Press **F10**.
- Select **Yes** to save the new password and close the Setup Utility.

Changing the supervisor password

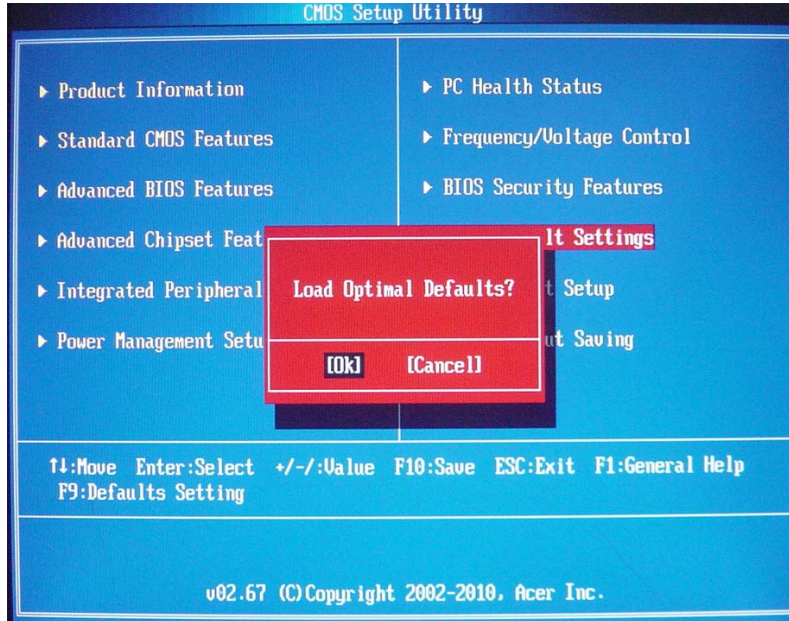

- Use the up/down arrow keys to select Change Supervisor Password menu then press **Enter**.
- Type the original password then press **Enter**.
- Type a new password then press **Enter**.
- Retype the password to verify the first entry then press **Enter** again.
- Press **F10**.
- Select **Yes** to save the new password and close the Setup Utility.

Removing a supervisor password

- Use the up/down arrow keys to select Change Supervisor Password menu then press **Enter**.
- Enter the current password then press **Enter**.
- Press **Enter** twice without entering anything in the password fields.

Load Default Settings

The Load Default Settings menu allows you to load the default settings for all BIOS setup parameters. Setup defaults are quite demanding in terms of resources consumption. If you are using low-speed memory chips or other kinds of low-performance components and you choose to load these settings, the system might not function properly.

Save & Exit Setup

The Save & Exit Setup menu allows you to save changes made and close the Setup Utility.

Exit Without Saving

The Exit Without Saving menu allows you to discard changes made and close the Setup Utility.

System Disassembly

This chapter contains step-by-step procedures on how to disassemble the desktop computer for maintenance and troubleshooting.

Disassembly Requirements

To disassemble the computer, you need the following tools:

- Wrist grounding strap and conductive mat for preventing electrostatic discharge
- Flat-blade screwdriver
- Philips screwdriver
- Hex screwdriver
- Plastic flat-blade screwdriver
- Plastic tweezers

NOTE: The screws for the different components vary in size. During the disassembly process, group the screws with the corresponding components to avoid mismatch when putting back the components.

Pre-disassembly Procedure

Before proceeding with the disassembly procedure, perform the steps listed below:

1. Turn off the system and all the peripherals connected to it.
2. Unplug the power cord from the power outlets.
3. Unplug the power cord from the system.
4. Unplug all peripheral cables from the system.
5. Place the system unit on a flat, stable surface.

Removing the Side Panel

1. Remove the two screws located on the rear edge of the side panel.

2. Slide the side panel toward the back of the chassis until the tabs on the cover disengage with the slots on the chassis.
3. Lift the side panel away from the server and put it aside for reinstallation later.

Removing the Heat Sink Fan Assembly

WARNING: The heat sink becomes very hot when the system is on. NEVER touch the heat sink with any metal or with your hands.

1. Disconnect the fan cable from the mainboard.

2. Use a long-nosed screwdriver to loosen the four screws on the heat sink, in the order as shown below.

-
3. Lift the heat sink fan assembly away from the mainboard.

4. Use an alcohol pad to wipe off the thermal grease from both the heat sink and the processor.

Removing the Processor

IMPORTANT: Before removing a processor from the mainboard, make sure to create a backup file of all important data.

WARNING: The processor becomes very hot when the system is on. Allow it to cool off first before handling.

1. Release the load lever.

2. Lift the load lever and load plate to the fully open.
3. Pull out the processor from the socket.

IMPORTANT: If you are going to install a new processor, note the arrow on the corner to make sure the processor is properly oriented over the socket.

Removing the Memory Modules

IMPORTANT: Before removing any DIMM from the memory board, make sure to create a backup file of all important data.

1. Press the holding clips on both sides of the DIMM slot outward to release the DIMM(1,2).
2. Gently pull the DIMM upward to pull it away from the M/B(3).

Removing the VGA Card

1. Release the Slot cover lock.

Slot Cover Lock

2. Remove the screw from chassis.
3. Disconnect the power cables from the VGA card.

4. One finger Press the clip and the same time Gently pull the card to remove it from the mainboard.

Removing the Mode Card

1. Gently pull the Mode card to remove it from the mainboard.

Removing the Front Bezel

1. Remove the side panel. Refer to the previous section for instructions.
2. Disconnect the LED cable.

3. Release the front bezel from the chassis interior.

4. Pull the bezel away from the chassis.

Removing Rear USB Board

1. Remove USB cable

2. Release the screw of rear usb.

3. Remove the rear usb board.

Removing the Hard Disk Drive

1. Disconnect the data and power cables from the rear of the optical drive and the mainboard.

2. Remove the HDD bracket
 - a. Remove the screw that secures the HDD bracket to the ODD bracket.

- b. Lift the bracket up and turn it over.

3. Remove the HDD module

- a. Remove the eight screws secure the HDD module to the HDD bracket.

- b. Slide the HDD out of the bracket.

Removing the Optical Drive

1. Disconnect the data and power cables from the rear of the optical drive.

2. Remove screw from the optical drive.

3. Pull the drive out of the drive.

Removing Cables

1. Remove power switch and LED cables from slot of M/B
2. Remove HDD Data and ODD Data cables from slot of M/B.

3. Remove USB1/2/3 cable from M/B.
4. Remove FIO cable and Audio cable from M/B

Removing the removable HDD bay

1. Remove the HDD rail

2. Remove the screws that secure the HDD bay.

3. Remove the HDD bay.

Removing the Power Supply

1. Disconnect the 24-pin and 4-pin power supply cables from the mainboard.

2. Remove the four screws that secure the power supply to the chassis.

3. Lift the power supply module out of the chassis.

Removing the Mainboard

1. Remove the eight screws that secure the mainboard to the chassis.

Note: Circuit boards >10 cm² has been highlighted with the yellow rectangle as above image shows.

Please detach the Circuit boards and follow local regulations for disposal.

2. Lift the board from the chassis.

3. Punching in IO Shield then you can remove it.

4. Remove the RTC battery.

Note: RTC battery has been highlighted with the yellow circle as above image shows. Please detach the RTC battery and follow local regulations for disposal.

System Troubleshooting

This chapter provides instructions on how to troubleshoot system hardware problems.

Hardware Diagnostic Procedure

IMPORTANT: The diagnostic tests described in this chapter are only intended to test Acer products. Non-Acer products, prototype cards, or modified options can give false errors and invalid system responses.

1. Obtain the failing symptoms in as much detail as possible.
2. Verify the symptoms by attempting to recreate the failure by running the diagnostic tests or repeating the same operation.
3. Refer to "Power System check" and "Beep Codes" to determine which corrective action to perform.

System Check Procedures

Power System Check

If the system will power on, skip this section. Refer to System External Inspection.

If the system will not power on, do the following:

- Check if the power cable is properly connected to the system and AC source.
- Check if the voltage selector switch is set to the correct voltage setting.

System External Inspection

1. Inspect the LED indicators on the front panel, which can indicate the malfunction.
2. Make sure that air flow is not blocked.
3. Make sure nothing in the system is making contact that could short out power.
4. If the problem is not evident, continue with System Internal Inspection.

System Internal Inspection

1. Turn off the system and all the peripherals connected to it.
2. Unplug the power cord from the power outlets.
3. Unplug the power cord from the system.
4. Unplug all peripheral cables from the system.
5. Place the system unit on a flat, stable surface.
6. Remove the system covers. For instructions on removing system covers, refer to "System Disassembly".
7. Verify that components are properly seated.
8. Verify that all cable connectors inside the system are firmly and correctly attached to their appropriate connectors.
9. Verify that all components are Acer-qualified and supported.
10. Replace the system covers.
11. Power on the system.
12. If the problem with the system is not evident, you can try viewing the POST messages and BIOS event logs during the system startup.

Beep Codes

Beep codes are used by the BIOS to indicate a serious or fatal error to the end user. Beep codes are used when an error occurs before the system video has been initialized. Beep codes will be generated by the system board speaker, commonly referred to as the PC speaker.

AMIBIOS displays the checkpoints in the bottom right corner of the screen during POST. This display method is limited, since it only displays checkpoints that occur after the video card has been activated.

Not all computers using AMIBIOS enable this feature. In most cases, a checkpoint card is the best tool for viewing AMIBIOS checkpoints.

Beep Symptom	Cause and Description
One short beep	System is ready. System is OK.
Continuous one long beep	Memory not installed or memory error.
One long beep and two short beeps then repeat.	VGA not installed or VGA error. Graphics card error/not installed, graphics card memory error or graphics card BIOS checksum error.
One long beep then two short beep	BIOS damaged. BIOS is damaged, BIOS POST jumps to Boot Block to execute the default procedures.
Two short beeps	CMOS damaged. CMOS checksum error or CMOS battery loss occurs.

Checkpoints

A checkpoint is either a byte or word value output to I/O port 80h. The BIOS outputs checkpoints throughout bootblock and Power-On Self Test (POST) to indicate the task the system is currently executing. Checkpoints are very useful in aiding software developers or technicians in debugging problems that occur during the pre-boot process.

Viewing BIOS checkpoints

Viewing all checkpoints generated by the BIOS requires a checkpoint card, also referred to as a POST card or POST diagnostic card. These are ISA or PCI add-in cards that show the value of I/O port 80h on a LED display. Checkpoints may appear on the bottom right corner of the screen during POST. This display method is limited, since it only displays checkpoints that occur after the video card has been activated.

Bootblock Initialization Code Checkpoints

The Bootblock initialization code sets up the chipset, memory, and other components before system memory is available. The following table describes the type of checkpoints that may occur during the bootblock initialization portion of the BIOS.

NOTE: Please note that checkpoints may differ between different platforms based on system configuration. Checkpoints may change due to vendor requirements, system chipset or option ROMs from add-in PCI devices.

Checkpoint	Description
Before D0	If boot block debugger is enabled, CPU cache-as-RAM functionality is enabled at this point. Stack will be enabled from this point.
D0	Early Boot Strap Processor (BSP) initialization like microcode update, frequency and other CPU critical initialization. Early chipset initialization is done.
D1	Early super I/O initialization is done including RTC and keyboard controller. Serial port is enabled at this point if needed for debugging. NMI is disabled. Perform keyboard controller BAT test. Save power-on CPUID value in scratch CMOS. Go to flat mode with 4GB limit and GA20 enabled.
D2	Verify the boot block checksum. System will hang here if checksum is bad.
D3	Disable CACHE before memory detection. Execute full memory sizing module. If memory sizing module not executed, start memory refresh and do memory sizing in Boot block code. Do additional chipset initialization. Re-enable CACHE. Verify that flat mode is enabled.
D4	Test base 512KB memory. Adjust policies and cache first 8MB. Set stack.
D5	Bootblock code is copied from ROM to lower system memory and control is given to it. BIOS now executes out of RAM. Copies compressed boot block code to memory in right segments. Copies BIOS from ROM to RAM for faster access. Performs main BIOS checksum and updates recovery status accordingly.
D6	Both key sequence and OEM specific method is checked to determine if BIOS recovery is forced. Main BIOS checksum is tested. If BIOS recovery is necessary, control flows to checkpoint E0. See Bootblock Recovery Code Checkpoints section for more information.
D7	Restore CPUID value back into register. The Bootblock-Runtime interface module is moved to system memory and control is given to it. Determine whether to execute serial flash.
D8	The Runtime module is uncompressed into memory. CPUID information is stored in memory.
D9	Store the Uncompressed pointer for future use in PMM. Copying Main BIOS into memory. Leaves all RAM below 1MB Read-Write including E000 and F000 shadow areas but closing SMRAM.

Checkpoint	Description
DA	Restore CPUID value back into register. Give control to BIOS POST (ExecutePOSTKernel). See POST Code Checkpoints section of document for more information.
DC	System is waking from ACPI S3 state.
E1-E8 EC-EE	OEM memory detection/configuration error. This range is reserved for chipset vendors & system manufacturers. The error associated with this value may be different from one platform to the next.

Bootblock Recovery Code Checkpoints

The Bootblock recovery code gets control when the BIOS determines that a BIOS recovery needs to occur because the user has forced the update or the BIOS checksum is corrupt. The following table describes the type of checkpoints that may occur during the Bootblock recovery portion of the BIOS.

NOTE: Checkpoints may differ between different platforms based on system configuration. Checkpoints may change due to vendor requirements, system chipset or option ROMs from add-in PCI devices.

Checkpoint	Description
E0	Initialize the floppy controller in the super I/O. Some interrupt vectors are initialized. DMA controller is initialized. 8259 interrupt controller is initialized. L1 cache is enabled.
E9	Set up floppy controller and data. Attempt to read from floppy.
EA	Enable ATAPI hardware. Attempt to read from ARMD and ATAPI CDROM.
EB	Disable ATAPI hardware. Jump back to checkpoint E9.
EF	Read error occurred on media. Jump back to checkpoint EB.
F0	Search for pre-defined recovery file name in root directory.
F1	Recovery file not found.
F2	Start reading FAT table and analyze FAT to find the clusters occupied by the recovery file.
F3	Start reading the recovery file cluster by cluster.
F5	Disable L1 cache.
FA	Check the validity of the recovery file configuration to the current configuration of the flash part.
FB	Make flash write enabled through chipset and OEM specific method. Detect proper flash part. Verify that the found flash part size equals the recovery file size.
F4	The recovery file size does not equal the found flash part size.
FC	Erase the flash part
FD	Program the flash part.
FF	The flash has been updated successfully. Make flash write disabled. Disable ATAPI hardware. Restore CPUID value back into register. Give control to F000 ROM at F000:FFF0h.

BIOS Recovery

1. Copy the target BIOS rom file to a USB disk. Rename the target BIOS to "amiboot.rom". Plug the USB disk to computer that you want to recovery the system BIOS.
2. Power on the system, BIOS recovery will be done. Wait for about 3 minutes the system will reboot automatically after flash update completed successfully.
3. Press "Del" Key to enter BIOS Setup.
4. Choose " Load Default Settings " and press " Enter " key.
4-1. Choose " OK " and press "Enter " key.
5. Choose "Save & Exit Setup " and press "Enter" key.
5-1. Choose " OK " and press "Enter " key.
6. AMIBIOS Recovery is finished.

Jumper and Connector Information

M/B Placement

No	Label	Description	No	Label	Description
1	CPU Socket	AM3 938 socket for CPU	2	PWR2	CPU Power connector
3	CPU_FAN	CPU fan power header	4	DIMM	CONN,DIMM,DDRIII, 1.5V,Blu,1mm,G/F,G,DIP-240
5	MB_ID1~2	GPIO connector	6	PWR1	M/B main power connector
7	SATA1~6	SATA data transfe connector	8	F_PANEL	Front panel switch/ LED
9	F_USB2~4	Card reader USB headers	10	F_USB1	Front panel USB headers
11	SYS_FAN	SYS fan header	12	SPI	SPI header
?13	HBIOS_WP	BIOS write protect header	14	CLR_CMOS	Clear CMOS jumpers
15	SPDIF_OUT	SPDIF out header	16	F_AUDIO	Front panel audio header
17	PCI1	PCI socket	18	PCIE_1X1	PCIE_1x1 socket
19	PCIE_1X	PCIE_1x socket	20	PCI-E1_16X	PCIE_x16socket

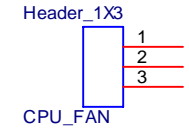

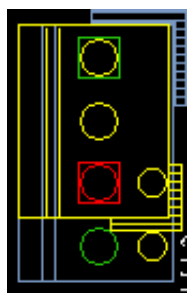

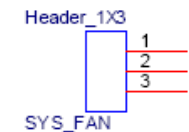

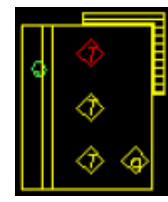

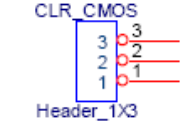

Jumper Setting

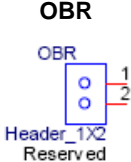

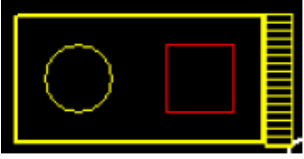

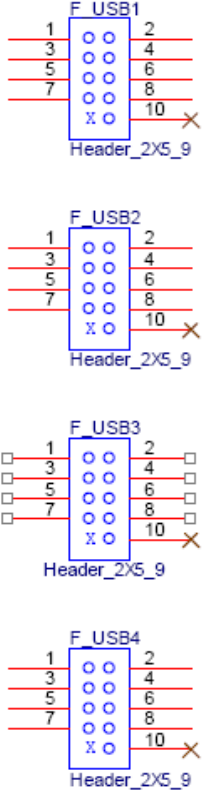

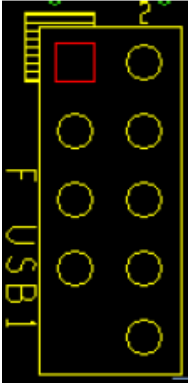

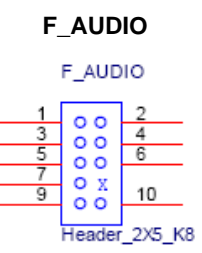

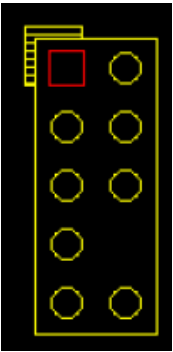

The section explains how to set jumper for correct configuration of the mainboard.

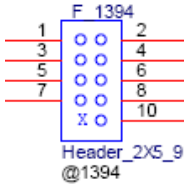

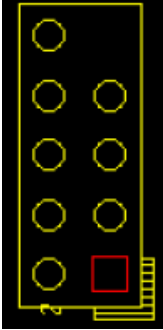

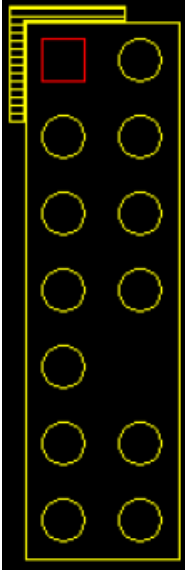

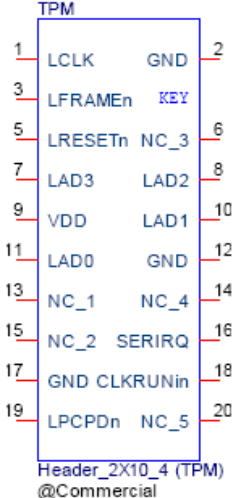

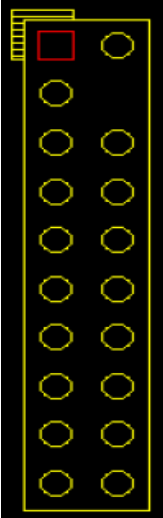

Setting Jumper

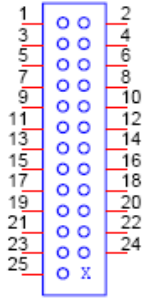

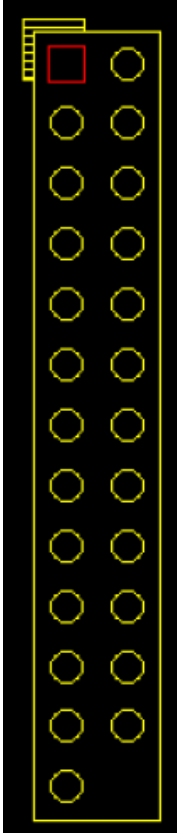

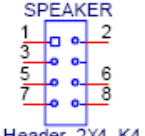

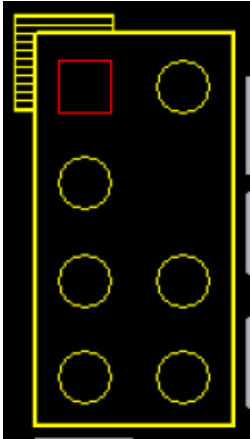

Use the motherboard jumpers to set system configuration options. Jumpers with more Than one pin are numbered. When setting the jumpers, ensure that the jumper caps are Placed on the correct pins.

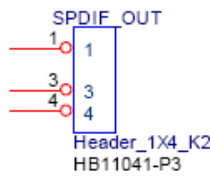

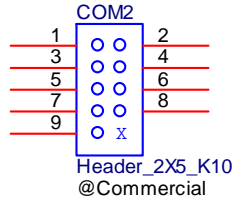

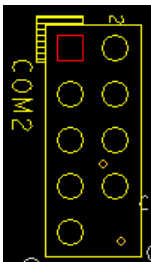

Internal header pin definition

Jumper/Header Name	Function	Definition
<p>CPU_FAN (3 PIN)</p> 	<p>CPU FAN HEADER</p> 	<p>1: SENSE 2: POWER 3: GND</p>
<p>SYS_FAN (3 PIN)</p> 	<p>SYS FAN HEADER</p>  <p>Yellow is symbol, Red is Pin 1 of symbol.</p>	<p>1: SENSE 2: POWER 3: GND</p>
<p>CLR_CMOS (3 PIN)</p> 	<p>CLEAR CMOS HEADER</p>  <p>Yellow is symbol, Red is Pin 1 of symbol.</p>	<p>1-2: CLEAR_CMOS (1: Ground, 2: RTC_RSTJ)</p> <p>2-3: NORMAL (3: VCC_RTC)</p>

FRU (Field Replaceable Unit) List

This chapter offers the FRU (Field Replaceable Unit) list in global configuration of the Aspire M3400(G) desktop computer. Refer to this chapter whenever ordering the parts to repair or for RMA (Return Merchandise Authorization).

NOTES:

- When ordering FRU parts, check the most up-to-date information available on your regional web or channel. For whatever reasons a part number is changed, it will NOT be noted on the printed Service Guide. For Acer authorized service providers, your Acer office may have a different part number code from those given in the FRU list of this printed Service Guide. You MUST use the local FRU list provided by your regional Acer office to order FRU parts for service.
- To scrap or to return the defective parts, follow the local government ordinance or regulations on how to dispose it properly, or follow the rules set by your regional Acer office on how to return it.
- This document will be updated as more information about the FRU list becomes available.
