Package Contents
- Wireless-G Business Ethernet Bridge
- Two SMA Detachable Dipole Antennas
- User Guide on CD-ROM
- Quick Installation
- Ethernet Network Cable
- Power Adapter
- Product Stands
- Registration Card

QUICK INSTALLATION

BUSINESS SERIES

Wireless-G Business Ethernet Bridge

Model: **WET200**

CISCO

1 Installation

NOTE: For details on placement options such as using the stands or wall-mounting, please refer to the User Guide on the CD-ROM.

A. Connect one end of an Ethernet network cable to the LAN port on your PC, then connect the other end to Ethernet port 1, 2, 3, 4, or 5 on the Bridge.

B. Connect the power adapter to the Bridge's Power port, and then plug the other end into an electrical outlet.

C. The Power LED on the front panel will light up green as soon as the power adapter is connected properly.

**Hardware installation is now complete.**

2 Configuration

Follow these instructions to set up the Bridge in Infrastructure mode. For information on advanced configuration refer to the User Guide on the CD-ROM.

A. Assign your PC a static IP address in the same subnet as the Bridge's default IP address, **192.168.1.226**.

B. Open your web browser. Enter **http://192.168.1.226** in its Address field. Press **Enter**.

Address http://192.168.1.226

C. The login screen appears. Enter the default user name and password, **admin**, in lowercase letters in the *User name* and *Password* fields. Click **OK**.

D. The web-based utility's *Setup* screen (the default screen) appears. Select the **Wireless** tab at the top of the screen.

E. The Wireless tab's *Basic Settings* screen appears. Click **Site Survey** to search for your wireless network.

F. The *Wireless Site Survey* screen displays a list of wireless networks in your area. Find your wireless network and connect to it by clicking the radio button to its left.

G. The next screen shows your wireless network's security settings. If the *Security Mode* is **Disabled**, security is not configured; click **Apply**. Otherwise, fill in the security settings (for example, the shared secret, or the passphrase and keys). Then click **Apply**.

H. A message briefly notifies you that the system is restarting, then the Wireless tab's *Basic Settings* screen appears, displaying your wireless network's basic settings.
Select the **Setup** tab to display the *Setup* screen.

I. If the Bridge's default IP address **192.168.1.226** conflicts with the addresses on your network, change the Bridge's IP address as follows:

- To assign a static IP address, select **Static IP Address** from the drop-down menu, then fill out the *Local IP Address*, *Subnet Mask*, *Default Gateway*, *Primary DNS*, and *Secondary DNS* fields. Then click **Apply**.

- To have a DHCP server assign an IP address to the Bridge, select **Automatic Configuration-DHCP** from the drop-down menu, then click **Apply**.

Congratulations! Configuration is now complete.

For additional information or troubleshooting help, please refer to the User Guide on the CD-ROM. Additional support is also available via e-mail or by phone.
