Troubleshooting

If your microphone isn't working, try these troubleshooting steps.

PC

- Make sure that the microphone is plugged into a USB port. Try unplugging and plugging it in.
- Verify that the microphone volume and playback volume settings are not muted in the operating system and that the volume level for these devices is set at least halfway up.
- Make sure that the software you are using has **USB Audio Device** selected as the recording device.
- Make sure that the device is listed in the *Device Manager*. Click **Start, Settings, Control Panel, System**, then click the **Device Manager** tab (the **Hardware** tab in Device Manager for Windows XP, Windows 2000, and Windows ME). Click **View**, then click **Devices by type**. Expand the entries under **Sound** and **Video and game controllers**. **USB Composite Device** should be listed. If not, unplug and replug the microphone into the USB port, then restart the computer.
- There is a chance that your computer may lock up when you plug in the device. If this occurs, contact your computer manufacturer for help.
- If you have problems with the quality of your sound recordings, then change the recording to 16-bit quality in Sound Recorder by clicking **File, Properties, Convert Now**. Under **Name**, click **CD Quality**.

Macintosh

- Make sure that only one USB microphone is plugged into a USB port.
- Verify that your operating system is OS 10.4.8 and higher. Operating systems below OS 10.4.8 do not support this device.
- Check the volume level.
