

AUTO SECURITY COMPUSTAR

CM1000S – R200 USER'S GUIDE

THANK YOU

Thank you for purchasing a CompuStar alarm and/or remote start system. CompuStar alarms and remote-start systems are the most advanced systems on the market with amazing features, incomparable ease of use, and breakthrough technologies never before utilized in the automotive environment. Please take time to read and understand this owner's manual so that you can enjoy your new CompuStar system.

BUTTON FUNCTIONS

This system is a remote start only system for adding to vehicles with a factory keyless entry or factory remote build on your keys. It may be possible to upgrade to a fully functional CompuStar remote start system. Please check with your installer for more details.

Button	1.5 sec	Notes
	Remote starts vehicle	
	Shuts vehicle off	
	Parking lights on	Turns parking lights on for 30 seconds or until button is tapped again
	Auxiliary (Optional)	When tapped this button will activate a pulse on the auxiliary

Key Button (1.5 Sec.) – Holding the Key Button for 1.5 seconds activates the remote start feature on your system. The vehicle will flash the parking lights once. Once the vehicle is remote started the parking lights will come on solid.

Stop Button (1.5 Sec.) – Holding the Stop Button for 1.5 seconds deactivates the remote start feature on your system. Once the vehicle is shut off the parking lights will go from solid to off. The parking lights will then flash twice to show the remote start has disengaged.

Parking Light Button (1.5 Sec.) – Holding the Parking Light button for 1.5 seconds will turn the parking lights on solid for your vehicle. The parking lights will stay on for 30 seconds or until you hold the button for 1.5 seconds.

Aux Button (1.5 Sec.) – Holding this button for 1.5 seconds will activate an auxiliary trigger on your vehicle. This is an optional function and could be used to unlock your trunk or open sliding doors.

VALET MODE

Valet Mode bypasses the functions of your remote starter. It is used in the event you bring your vehicle in for service, loan your vehicle to someone, or if you have your vehicle parked by valet service. Valet Mode is used as a precaution so there is no accidental activation of the remote start.

To place your system into Valet Mode you must turn the Ignition On and Off for 5 times within 7 seconds with key. When the parking lights flash once, pauses and then flashes twice, your system is now in Valet Mode. Please follow this diagram below:

DIAGNOSTIC MESSAGES

1. Whenever the system fails to remote start, the vehicle provides you with diagnostic error messages: # of times parking lights flash. The vehicle will first flash the parking lights 3 times followed by the remote start error.

Number of Parking Light Flashes	Remote Start Error
1	Motor running
2	Key in ignition on position
3	Door open (manual transmission only)
4	Trunk open
5	Foot brake on
6	Hood open
7	Reservation off (manual transmission only)
8	No tach signal or voltage sensing failure (please see your CompuStar installer)

2. Depending on the vehicle, it may be possible that the factory remote may not operate while the vehicle is remote started. It is not an error the CompuStar. It is a function of the vehicle disabling factory features while the car is running.

MANUAL TRANSMISSION VEHICLES

To use the remote-start function on a manual transmission vehicle, you must first set Reservation Mode. Reservation mode sets the vehicle up to safely start the next time you use the remote-start. To set Reservation Mode, follow these steps:

1. Completely stop the vehicle and put it in NEUTRAL.
2. Set the emergency brake and remove your foot from the foot brake.
3. A few seconds later you should hear a “click”.
4. Turn the key off and remove it from the ignition. The vehicle will stay running.
5. Exit the vehicle and close the door.
6. The vehicle will shut off, the system will arm, and the doors will lock.

Reservation Mode has now been set. The following actions will cancel Reservation Mode; opening the hood, doors, or trunk, turning on the ignition, releasing the emergency brake, turning on the ignition, or triggering the alarm. If reservation mode is cancelled, you will need to get in the vehicle and repeat the setup process.

ADDITIONAL FEATURES

A. Remote Start Runtime

The runtime must be set by your CompuStar dealer. You have the option of having your vehicle run for 15 minutes or 25 minutes, or 25 or 45 minutes if you have a diesel engine.

B. Anti Grind

Additional installation may be required for this feature. When you remote start your vehicle and enter you must put the vehicle's key in the ignition and turn it forward. When you turn the key forward there is a chance of overturning the starter. With anti-grind installed then you cannot over grind your starter on your vehicle.

C. Upgradeability

The CM1000S is a stand alone remote start system. The functionality of this system is very basic and lacks a few features of a standard remote start on our upgradeable series. However it is possible to upgrade to one of many remotes in the CompuStar line. You can only upgrade to the remotes in the CompuStar line and not the Pro Series. Please check with your authorized CompuStar dealer for more details.

SAFETY INFORMATION

Please take these safety precautions under the following conditions:

1. Servicing the vehicle

When servicing (i.e. changing the oil, washing your car) your vehicle, the CompuStar system should be placed in Valet Mode. There is a safety shutdown switch under the hood that deactivates the remote starter function if the hood is open. However, if the switch has been damaged or has been installed improperly, the vehicle may start when the Circle button is held down for 2.5 seconds even if the hood is open.

2. Loaning your vehicle to others

Whenever you loan your vehicle to an individual who is not familiar with the CompuStar system, please put the vehicle in Valet Mode. This will prevent the vehicle loaner from accidentally activating the CompuStar auto-security system.

3. For manual transmission vehicles

If the CompuStar 2WSH-LED is installed in a manual transmission vehicle, extra precautions should be taken as the system does not monitor the gear placement.

Important!

Under normal circumstances, Reservation Mode is cancelled when a door or rear hatch opens. Please verify that the opening of any door or rear hatch cancels Reservation Mode. If any of the doors or rear hatch are not monitored by the CompuStar due to improper installation or a faulty door or dome light switch, do not use the CompuStar and take your vehicle to the dealer immediately for repair. Do not set Reservation Mode when the window(s) are open or if there is anyone inside of the vehicle including animals.

LIMITED LIFETIME CONSUMER WARRANTY

Firstech, LLC Warrants to the original purchaser that this product shall be free of defects in material and workmanship under normal use and circumstances for the period of time that the original owner of this product owns the vehicle in which it is installed; except that the remote controller unit for the period of one year from the date of installation to the original owner of this product.
