Specification

ADSL Wireless-g Broadband Router

Features

- ◆ ADSL Standards
 - DMT modulation and demodulation
 - Tone detection for low power mode
 - ITU 992.1 (G.dmt) Annex A, B, C
 - ITU 992.2 (G.lite)
 - ITU 992.3 ADSL2 (G.dmt.bis)
 - ITU 992.4 ADSL2 (G.lite.bis)
 - ITU 992.5 ADSL2+
 - ANSI T1.413 Issue 2
 - Dying Gasp (Optional)
- ◆ Full-rate adaptive modem
 - Maximum downstream rate of 24 Mbps (ADSL2+)
 - Maximum upstream rate of 1 Mbps
- ◆ G.lite adaptive modem
 - Maximum downstream rate of 1.5 Mbps
 - Maximum upstream rate of 512 Kbps
- ◆ WAN Mode Support
 - PPP over ATM (RFC 2364)
 - PPP over Ethernet (RFC 2516)
- ◆ LAN Mode Support
 - Bridged/routed Ethernet over ATM (RFC 2684/1483)
 - Classical IP over ATM (RFC 1577) and PPP over Ethernet (RFC 2516)
- ◆ Bridge Mode Support
 - Ethernet to ADSL self-learning Transparent Bridging (IEEE 802.1D)
 - Supports up to 128 MAC learning addresses
- ◆ Router Mode Support
 - IP routing-RIPv2 (backward compatible with RIPv1)

Static routing

DHCP Server and Client

NAPT (Network Address and Port Translation)

NAT (Network Address Translation)

ICMP (Internet Control Message Protocol)

Simultaneous USB and Ethernet operation

IGMP (Internet Group Management Protocol)

◆ **802.11g Wireless Access Point**

54Mbps Access Point for wireless connectivity

Interoperable with IEEE 802.11g (PBCC & OFDM Modulation

Technology supports) 2.4GHz compliant equipment

Supports full mobility and seamless roaming from cell to cell

Support Ad hoc and Infrastructure mode

Support AP client architecture

Support WEP (64/128 bit)

Provides up to 30 users wireless connection

Work range: per node indoors approximately 30m~100m,

Outdoor (line of sight) 200m~300m depending on data rates

External antenna: one 2dbi detachable antennas with diversity support (Reverse SMA connector)

◆ **RF Specification**

Frequency band 2400-24835 MHz (ISM), DSSS spreading, CCK, OFDM modulation

Max Power Transmission 100mW

1 internal antenna, 1 external antenna

◆ **Ethernet Features**

Four RJ-45 connectors for 10/100 Mbps Ethernet LAN connection,

DMZ function can be set up between them

Complies with IEEE 802.3u specification

Supports Auto-Negotiation

Supports Auto-MDIX, Auto-MDI

Supports IEEE 802.3x Flow control in Full Duplex mode

◆ **Security & Firewall Functions**

WEP/Firewall + MAC filter

Specification

◆ **Hardware**

Line Connection: RJ-11, RJ-45 Connection

Power: Input: 90~120V or 200~240V, 50/60Hz

Output: 7.5VDC/1.5A

OS: Windows 98SE/ 2000/ ME/ XP

System Requirement: PII-266 + 32M RAM

LED Indication: PWR, ADSL LINK, WLAN, LAN

Software Upgrade: Upgrade by Ethernet Port

◆ Certification

FCC Part 15, CE,

ADSL Wireless Router

4 Ports LAN

4 Port ADSL Wireless Router

4 Port ADSL Wireless Router

Label	Meaning	Status	Indicates
Power	Power	On	Power is on
		Off	Power is off
WLAN	Wireless LAN	Flashing	Check wireless device.
LAN 1/ LAN 2/ LAN 3/ LAN 4	LAN Link	Flashing	Flashes when data is being sent or received on the LAN connection.
		On	Indicates a link to your LAN or Network card is active.
ADSL	Link	Off	Indicates no link to LAN
		Link	A valid ADSL connection.
	Active	Act	An active WAN session.

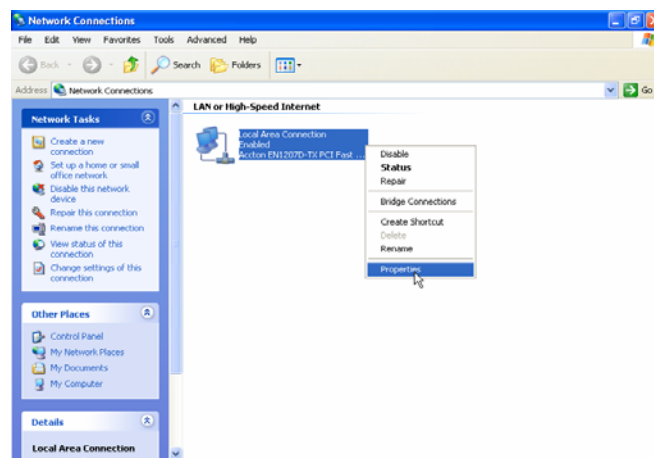

General Setting

Move your cursor as following sequence **Start \ Settings \ Control Panel** and click **Control Panel**. Then double-click on the **Network Connections**

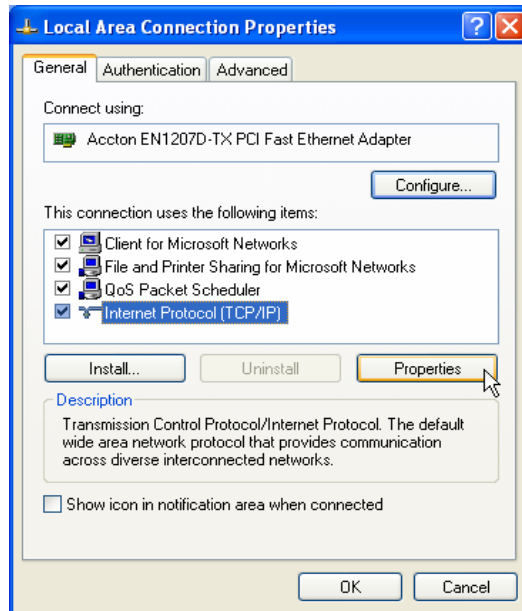

In the **LAN or High-Speed Internet** window, right-click on icon corresponding to your network interface card (NIC) and select **Properties**. (This icon may be labeled Local Area Connection).

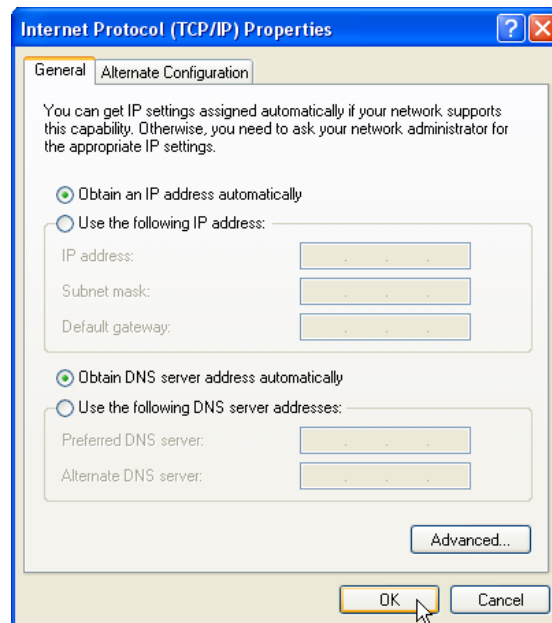

Step 3

In the **General** Tab of the **Local Area Connection Properties** menu. Highlight **Internet Protocol (TCP/IP)** under “This connection uses the following items.” by click on it once. Click on the **Properties** button.

Step 4

Select **Obtain an IP Address automatically**: by clicking once in the circle. Click **OK** button to confirm and save your changes, and the close the Control Panel.

Step 5

Release IP & Renew IP, then Check Default Gateway: **192.168.1.1**.

```
Command Prompt
C:\Documents and Settings\Administrator>ipconfig /release
Windows IP Configuration

Ethernet adapter Local Area Connection 4:

    Connection-specific DNS Suffix  . : 
    IP Address . . . . . : 0.0.0.0
    Subnet Mask . . . . . : 0.0.0.0
    Default Gateway . . . . . : 

C:\Documents and Settings\Administrator>ipconfig /renew
Windows IP Configuration

Ethernet adapter Local Area Connection 4:

    Connection-specific DNS Suffix  . : 
    IP Address . . . . . : 192.168.1.2
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : 192.168.1.1

C:\Documents and Settings\Administrator>
```

Step 6

Launch your PC web browser and enter the URL: **http://192.168.1.1**

Step 7

In the **User name/Password** prompt, please type in **Admin/Admin** as default.

A screenshot of a web-based login form. The form has a grey background and a blue header. The title is "Log In". Below the title, it says "Please log in to setup your DSL setting." There are two input fields: "Username:" with the text "Admin" entered, and "Password:" with "*****" entered. A "Log In" button is located at the bottom right of the form.

Step 8

Please wait for the **Home** page to appear.

The screenshot displays the 'Home' page of a TI DSL Modem. The page has a light blue background and a white sidebar on the left. The sidebar contains a 'Main Menu' with links for 'OnePage Setup', 'Wireless', and 'Show Advanced'. Below this is a 'Status' section with links for 'Network Statistics', 'Connection Status', and 'System Log'. At the bottom of the sidebar is a 'Save Setting and Reboot' button. The main content area is titled 'Home' and includes a welcome message: 'Welcome to the TI DSL Modem.' Below this is a 'Status Information' table. At the bottom of the main content area are 'Log Out' and 'Refresh' buttons.

Status Information	
System Uptime	0 hours 14 minutes
DSL Status	Disconnected
DSL Speed	0/0kbps
LAN IP Address	192.168.1.1
Wireless RF	Enabled
Ethernet	Connected
DHCP Server	Running
Software Version	3.3.1
SSID	TI

OnePage Setup

When working with wide area connections, the first thing you must do is to have the handle of the connection. Once you have the handle for a Connection you must define the PVC and protocol settings for it.

The screenshot shows the 'PPPoE Connection Setup' page. On the left is a 'Main Menu' with options like 'OnePage Setup', 'Wireless', and 'Show Advanced'. Below it is a 'Status' section with 'Network Statistics', 'Connection Status', and 'System Log'. A 'Save Setting and Reboot' button is visible. The main configuration area includes: 'Name' (text input), 'Type' (dropdown menu set to 'PPPoE'), 'Options' (checkboxes for 'NAT' and 'Firewall'), 'PPP Settings' (Username: 'username', Password: '****', Idle Timeout: '60' secs, Keep Alive: '10' min, MAX Fail: '10' times, MRU: '1492' bytes, On Demand: unchecked, Set Route: checked, Enforce MRU: unchecked, Debug: unchecked), and 'PVC Settings' (VPI: '0', VCI: '0', QoS: 'UBR' dropdown, PCR: empty, SCR: empty). At the bottom are 'Apply', 'Delete', and 'Cancel' buttons, and a note: 'Note: you must Save Setting and Reboot for changes to take effect.'

The screenshot shows the 'PPPoA Connection Setup' page. It has the same left-hand menu as the PPPoE page. The main configuration area includes: 'Name' (text input), 'Type' (dropdown menu set to 'PPPoA'), 'Options' (checkboxes for 'NAT' and 'Firewall'), 'PPP Settings' (Encapsulation: radio buttons for 'LLC' (selected) and 'VC', Username: 'username', Password: '****', Idle Timeout: '60' secs, Keep Alive: '10' min, MAX Fail: '10' times, MRU: '1500' bytes, On Demand: unchecked, Set Route: checked, Debug: unchecked), and 'PVC Settings' (VPI: '0', VCI: '0', QoS: 'UBR' dropdown, PCR: empty, SCR: empty). At the bottom are 'Apply', 'Delete', and 'Cancel' buttons, and a note: 'Note: you must Save Setting and Reboot for changes to take effect.'

Name: Enter the name of your ISP. This information is for identification purposes only.

Type: There six kinds of method (PPPoE/ PPPoA/ Static/ DHCP/ Bridge/ CLIP).

PPP Settings

Encapsulation: Select you encapsulation type. (Supplied by your ISP).

Username: Enter the username provided by your ISP.

Password: Enter the password provided by your ISP.

Idle Timeout: Idle timeout means the router will disconnect after being idle for a

preset amount of time. The default is 60 seconds. If you set the time to 0, the ISDN connection will remain always connected to the ISP.

Keep Alive: If mode is LCP, This is the Keep Alive timer. If a reply to the LCP echo is not received in this amount if time, the connection is dropped. The Default is 10.

Authentication: Set the required authentication protocol. (Auto/ CHAP/ PAP)

MRU: Maximum Receive Unit indicates the peer of PPP connection the maximum size of the PPP information field this device can be received. The default value is 1492 and is used in the beginning of the PPP negotiation. In the normal negotiation, the peer will accept this MRU and will not send packet with information field larger than this value.

PVC Settings

VPI: If instructed to change this, type in the VPI value for the initial connection (using PVC 0). Default = 0.

VCI: If instructed to change this, type in the VCI value for the initial connection (using PVC 0). Default = 0.

QoS: Quality of Service type. Select CBR (Continuous Bit Rate) to specify fixed (always-on) bandwidth for voice or data traffic. Select UBR (Unspecified Bit Rate) for applications that are non-time sensitive, such as e-mail. Select VBR (Variable Bit Rate) for burst traffic and bandwidth sharing with other applications.

PCR: Divide the DSL line rate (bps) by 424 (the size of an ATM cell) to find the Peak Cell Rate (PCR). This is the maximum rate at which the sender can send cells.

SCR: The Sustain Cell Rate (SCR) sets the average cell rate (long-term) that can be transmitted.

Name: Enter the name of your ISP. This information is for identification purposes only.

Type: There six kinds of method (PPPoE/ PPPoA/ Static/ DHCP/ Bridge/ CLIP).

Static Settings

Encapsulation: Select you encapsulation type. (Supplied by your ISP).

IP Address: Private IP address for connecting to a local private network (Default: 192.168.1.1).

Netmask: Netmask for the local private network (Default: 255.255.255.0).

Default Gateway: This field is optional. Enter in the IP address of the router on your network.

DNS: Sets the IP address of the DNS server.

Mode: Bridged and Routed

PVC Settings

VPI: If instructed to change this, type in the VPI value for the initial connection (using PVC 0). Default = 0.

VCI: If instructed to change this, type in the VCI value for the initial connection (using PVC 0). Default = 0.

QoS: Quality of Service type. Select CBR (Continuous Bit Rate) to specify fixed (always-on) bandwidth for voice or data traffic. Select UBR (Unspecified Bit Rate) for applications that are non-time sensitive, such as e-mail. Select VBR (Variable Bit Rate) for burst traffic and bandwidth sharing with other applications.

PCR: Divide the DSL line rate (bps) by 424 (the size of an ATM cell) to find the Peak Cell Rate (PCR). This is the maximum rate at which the sender can send cells.

SCR: The Sustain Cell Rate (SCR) sets the average cell rate (long-term) that can be transmitted.

Name: Enter the name of your ISP. This information is for identification purposes only.

Type: There six kinds of method (PPPoE/ PPPoA/ Static/ DHCP/ Bridge/ CLIP).

DHCP Settings

Encapsulation: Select you encapsulation type. (Supplied by your ISP).

IP Address: Private IP address for connecting to a local private network (Default: 192.168.1.1).

PVC Settings

VPI: If instructed to change this, type in the VPI value for the initial connection (using PVC 0). Default = 0.

VCI: If instructed to change this, type in the VCI value for the initial connection (using PVC 0). Default = 0.

QoS: Quality of Service type. Select CBR (Continuous Bit Rate) to specify fixed (always-on) bandwidth for voice or data traffic. Select UBR (Unspecified Bit Rate) for applications that are non-time sensitive, such as e-mail. Select VBR (Variable Bit Rate) for burst traffic and bandwidth sharing with other applications.

PCR: Divide the DSL line rate (bps) by 424 (the size of an ATM cell) to find the Peak Cell Rate (PCR). This is the maximum rate at which the sender can send cells.

SCR: The Sustain Cell Rate (SCR) sets the average cell rate (long-term) that can be transmitted.

Name: Enter the name of your ISP. This information is for identification purposes only.

Type: There six kinds of method (PPPoE/ PPPoA/ Static/ DHCP/ Bridge/ CLIP).

Bridge Settings

Encapsulation: Select you encapsulation type. (Supplied by your ISP).

PVC Settings

VPI: If instructed to change this, type in the VPI value for the initial connection (using PVC 0). Default = 0.

VCI: If instructed to change this, type in the VCI value for the initial connection (using PVC 0). Default = 0.

QoS: Quality of Service type. Select CBR (Continuous Bit Rate) to specify fixed (always-on) bandwidth for voice or data traffic. Select UBR (Unspecified Bit Rate) for applications that are non-time sensitive, such as e-mail. Select VBR (Variable Bit Rate) for burst traffic and bandwidth sharing with other applications.

PCR: Divide the DSL line rate (bps) by 424 (the size of an ATM cell) to find the Peak Cell Rate (PCR). This is the maximum rate at which the sender can send cells.

SCR: The Sustain Cell Rate (SCR) sets the average cell rate (long-term) that can be transmitted.

Name: Enter the name of your ISP. This information is for identification purposes only.

Type: There six kinds of method (PPPoE/ PPPoA/ Static/ DHCP/ Bridge/ CLIP).

CLIP Settings

IP Address: Private IP address for connecting to a local private network (Default: 192.168.1.1).

Netmask: Netmask for the local private network (Default: 255.255.255.0).

ARP Server: Translating an IP address to an ATM address.

Default Gateway: This field is optional. Enter in the IP address of the router on your network.

PVC Settings

VPI: If instructed to change this, type in the VPI value for the initial connection (using PVC 0). Default = **0**.

VCI: If instructed to change this, type in the VCI value for the initial connection (using PVC 0). Default = **0**.

QoS: Quality of Service type. Select CBR (Continuous Bit Rate) to specify fixed (always-on) bandwidth for voice or data traffic. Select UBR (Unspecified Bit Rate) for applications that are non-time sensitive, such as e-mail. Select VBR (Variable Bit Rate) for burst traffic and bandwidth sharing with other applications.

PCR: Divide the DSL line rate (bps) by 424 (the size of an ATM cell) to find the Peak Cell Rate (PCR). This is the maximum rate at which the sender can send cells.

SCR: The Sustain Cell Rate (SCR) sets the average cell rate (long-term) that can be transmitted.

Apply: Click Apply to save the changes.

Wireless

This page allow you to enable and disable the wireless LAN function, create a SSID, and select the channel for wireless communications..

The screenshot shows the 'Wireless Setup' configuration page. On the left is a sidebar with a 'Main Menu' (containing 'OnePage Setup', 'Wireless', and 'Show Advanced') and a 'Status' section (containing 'Network Statistics', 'Connection Status', and 'System Log'). A 'Save Setting and Reboot' button is located at the bottom of the sidebar. The main content area, titled 'Wireless Setup', features the following controls: 'Enable AP:' with a checked checkbox, 'Channel:' with a dropdown menu set to '6', 'SSID:' with a text box containing 'T1', and 'Domain:' with the value 'ETSI'. Below these fields are an 'Advanced' button, a note stating 'Note: you must Save Setting and Reboot for changes to take effect.', and 'Apply' and 'Cancel' buttons.

Channel: Select a transmission channel for wireless communications. The channel of any wireless device must match the channel selected here in order for the wireless device to access the LAN and WAN via the router.

SSID: Type an SSID in the text box. The SSID of any wireless device must match the SSID typed here in order for the wireless device to access the LAN and WAN via the router.

Apply: Click Apply to save the changes.

Advanced

Wireless Setup

Enable AP: Channel: 6

SSID: T1

Domain: ETSI

Beacon Period: 200

DTIM Period: 2

RTS Threshold: 2347

Frag Threshold: 2346

Power Level: Full

b/g Mode: Mixed

Hidden SSID:

Note: you must Save Setting and Reboot for changes to take effect.

Apply Cancel

Beacon Period: Type the Beacon Period in the text box. You can specify a value from 0 to 65535. The default Beacon Period is 200.

DTIM Period: Type a DTIM (Delivery Traffic Indication Message) Period in the text box. You can specify a value between 1 and 255. The default value is 2.

RTS Threshold: Type the RTS (Request-To-Send) threshold in the text box. You can specify a value from 0 to 4096. The default value is 2347.

Frag Threshold: Type the fragmentation in the text box. You can specify a value from 0 to 4096. The default value is 2346.

Power Level: Adjust the power of the antenna transmission by selecting from the dropping list.

b/g Mode: Select mode from the dropping list. (Mixed/ b/ b+/ 11g only)

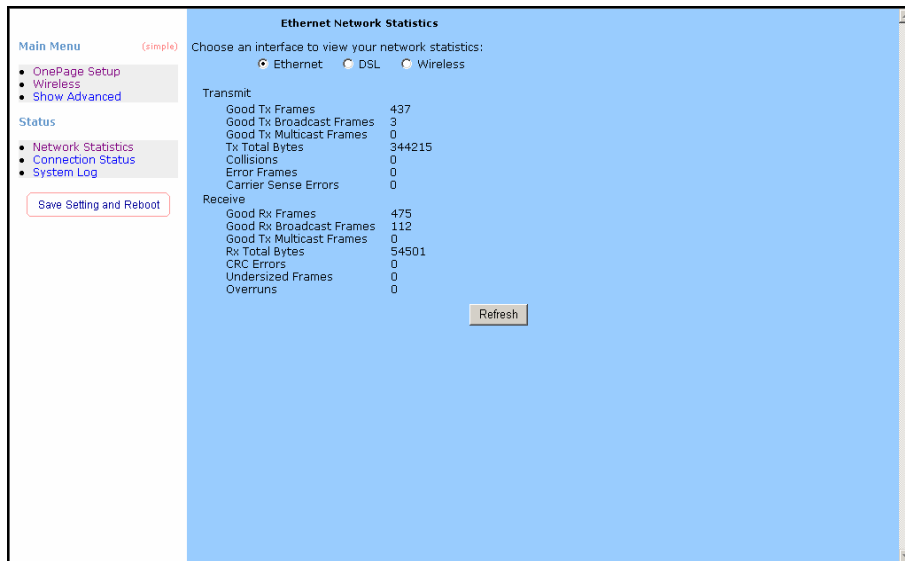

Hidden SSID: Select it to hidden your SSID.

Apply: Click Apply to save the changes.

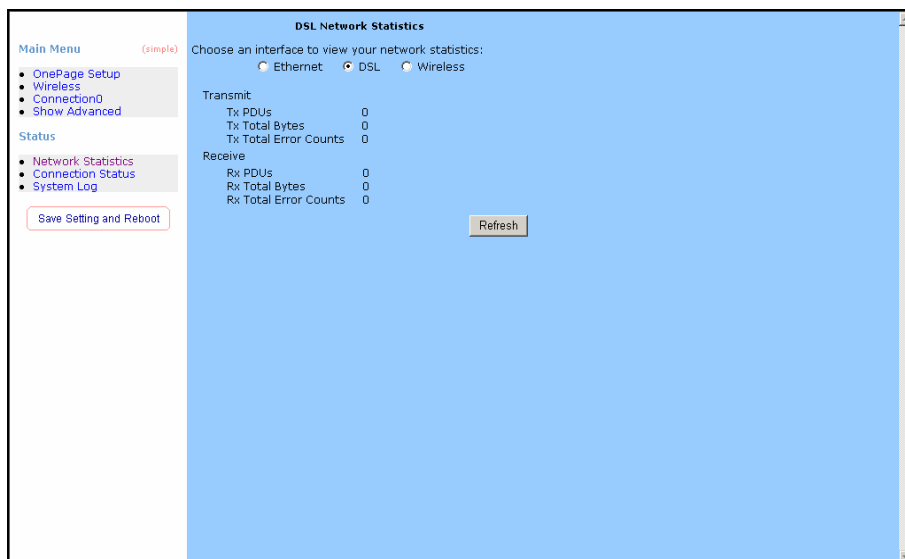

Status

Network Statistics

The Ethernet Network Statistics page shows the statistics for the Ethernet connection.

The DSL Network Statistics page shows the statistics for the DSL connection.

The Wireless Network Statistics page shows the statistics for the Wireless connection.

The screenshot shows a web interface for network statistics. On the left is a navigation menu with sections for 'Main Menu' and 'Status'. The 'Main Menu' section includes links for 'OnePage Setup', 'Wireless', 'Connection0', and 'Show Advanced'. The 'Status' section includes links for 'Network Statistics', 'Connection Status', and 'System Log'. A 'Save Setting and Reboot' button is located below the menu. The main content area is titled 'Wireless Network Statistics' and features three radio buttons to select an interface: 'Ethernet', 'DSL', and 'Wireless' (which is selected). Below the selection, there are two tables of statistics. The first table, labeled 'Transmit', shows: MPDUs (80), MSDUs (99), Multicast MSDUs (99), Failed MSDUs (16), and Retry MSDUs (0). The second table, labeled 'Receive', shows: MPDUs (0), MSDUs (0), Multicast MSDUs (0), and FCS Error MPDUs (0). A 'Refresh' button is positioned at the bottom right of the statistics area.

Wireless Network Statistics

Choose an interface to view your network statistics:

Ethernet DSL Wireless

Transmit

MPDUs	80
MSDUs	99
Multicast MSDUs	99
Failed MSDUs	16
Retry MSDUs	0

Receive

MPDUs	0
MSDUs	0
Multicast MSDUs	0
FCS Error MPDUs	0

Refresh

Connection Status

The Connection Status page shows the status of PPP for each PPP interface.

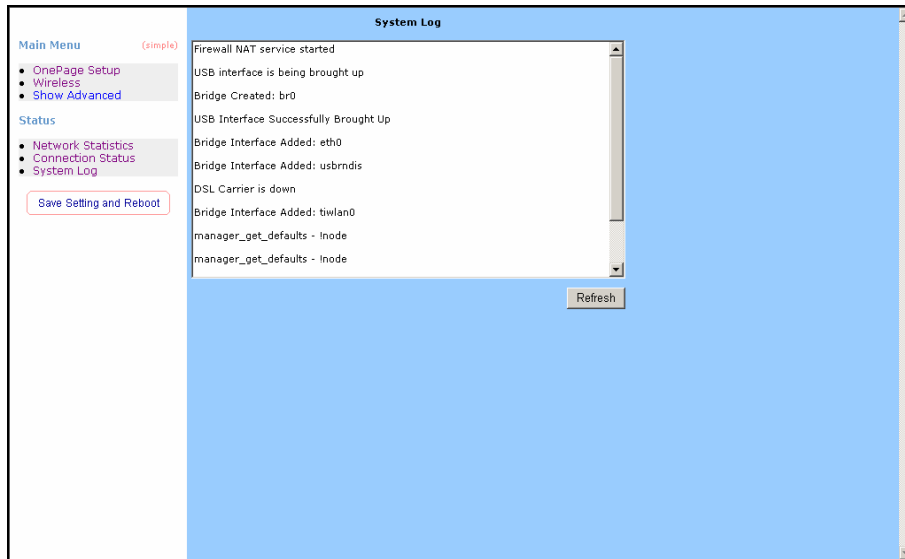

The screenshot shows a web interface for monitoring network connections. On the left is a navigation menu with sections for 'Main Menu' and 'Status'. The 'Main Menu' section includes links for 'OnePage Setup', 'Wireless', 'Connection0', and 'Show Advanced'. The 'Status' section includes links for 'Network Statistics', 'Connection Status', and 'System Log'. A 'Save Setting and Reboot' button is located at the bottom of the menu. The main content area is titled 'Connection Status' and features a table with the following data:

Description	Type	IP	State	Online	Disconnect Reason
PPPoE	pppoe	N/A	Not Connected	0	N/A

A 'Refresh' button is positioned to the right of the table. The background of the main content area is light blue.

System Log

The System Log page shows the events triggered by the system.

Advanced Setting

LAN Setup

The following is displayed LAN Setup.

DHCP Configuration

DHCP stands for Dynamic Host Configuration Protocol. It can automatically dispatch related IP settings to any local user configured as a DHCP client.

The screenshot shows a web interface for DHCP Configuration. On the left is a navigation menu with categories: Main Menu (Advanced), LAN Setup (OnePage Setup, Wireless), LAN Setup (DHCP Configuration, Management IP, Firewall/NAT), WAN Setup (Add New Connection, Hide Advanced), Advanced +, Tools +, and Status +. A 'Save Setting and Reboot' button is visible under the Status + section. The main content area is titled 'DHCP Configuration' and features three radio button options: 'Server On' (selected), 'Relay On', and 'Server and Relay Off'. The 'Server On' option has input fields for 'Start IP' (192.168.1.2), 'End IP' (192.168.1.254), and 'Lease Time' (3600) Seconds. The 'Relay On' option has a 'Relay IP' field (20.0.0.3). 'Apply' and 'Cancel' buttons are located below the configuration fields. A note at the bottom states: 'Note: you must Save Setting and Reboot for changes to take effect.'

Server On: Enables the DHCP server.

Start IP: Sets the start IP address of the IP address pool.

End IP: Sets the end IP address of the IP address pool.

Lease time: The lease time is the amount of time of a network user will be allowed to connect with DHCP server. If all fields are 0, the allocated IP address will be effective forever.

Relay On: Allow PCs on LAN to request IP from other DHCP server.

Relay IP: Sets the other DHCP server IP address.

Apply: Click Apply to save the changes.

Management IP

The Management IP page shows the ADSL physical layer status.

The screenshot shows a web interface for configuring the Management IP. On the left is a navigation menu with categories like 'Main Menu (Advanced)', 'LAN Setup', and 'WAN Setup'. The 'Management IP' option is selected. The main content area is titled 'Management IP' and contains several input fields: 'IP Address' (192.168.1.1), 'Netmask' (255.255.255.0), 'Default Gateway' (empty), 'Hostname' (mygateway), and 'Domain Name' (a7). Below these are four 'Physical Port' dropdown menus, all set to 'Disabled'. At the bottom right are 'Apply' and 'Cancel' buttons. A note at the bottom states: 'Note: you must Save Setting and Reboot for changes to take effect.' A 'Save Setting and Reboot' button is also visible in the left sidebar.

IP Address: Private IP address for connecting to a local private network (Default: 192.168.1.1).

Netmask: Netmask for the local private network (Default: 255.255.255.0).

Default Gateway: This field is optional. Enter in the IP address of the router on your network.

Host Name: Required by some ISPs. If the ISP does not provide the Host name, please leave it blank.

Domain Name: www.dynsns.org will provide you with a Domain Name. Enter this name in the "Domain Name" field.

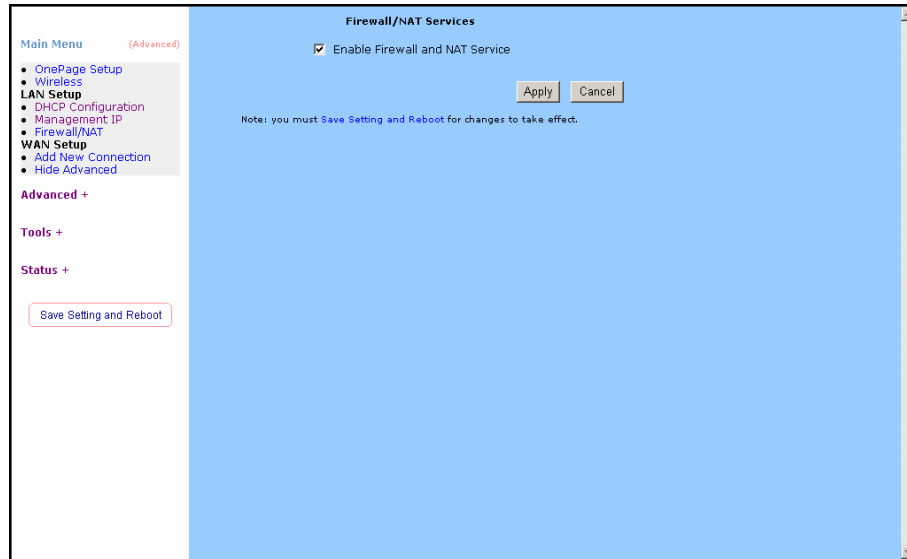

Physical Port: There are five kinds of mode for data transfer (Auto)(10/Half Duplex)(10/Full Duplex)(100/Half Duplex)(100/Full Duplex).

Apply: Click Apply to save the changes.

Firewall/NAT Services

Network Address Translation (NAT): Is a method of mapping one or more IP addresses and/or IP service ports into different specified values.

Firewall: In addition to the built-in NAT mechanism.

Firewall/NAT Services: Select Enable to turn on the Firewall/NAT Service.

Apply: Click Apply to save the changes.

WAN Setup

The following is displayed WAN Setup.

Add New Connection

When working with wide area connections, the first thing you must do is to have the handle of the connection. Once you have the handle for a Connection you must define the PVC and protocol settings for it.

The screenshot shows the 'PPPoE Connection Setup' configuration page. On the left is a navigation menu with options like 'Main Menu (Advanced)', 'OnePage Setup', 'Wireless', 'LAN Setup', 'WAN Setup', and 'Advanced +'. The main area contains the following fields and options:

- Name:** [Text input field]
- Type:** PPPoE (dropdown menu)
- Options:** NAT Firewall
- PPP Settings:**
 - Username:** [Text input field: username]
 - Password:** [Text input field: ****]
 - Idle Timeout:** [Text input field: 60] secs
 - Keep Alive:** [Text input field: 10] min
 - MAX Fail:** [Text input field: 10] times
 - MRU:** [Text input field: 1492] bytes
 - On Demand:** **Set Route:**
 - Enforce MRU:** **Debug:**
- PVC Settings:**
 - VPI:** [Text input field: 0]
 - VCI:** [Text input field: 0]

 - VPI:** [Text input field: 0]
 - VCI:** [Text input field: 0]
 - QoS:** UBR (dropdown menu)
 - PCR:** [Text input field] cps
 - SCR:** [Text input field] cps

Buttons: [Apply] [Delete] [Cancel]

Note: you must Save Setting and Reboot for changes to take effect.

Name: Enter the name of your ISP. This information is for identification purposes only.

Type: There six kinds of method (PPPoE/ PPPoA/ Static/ DHCP/ Bridge/ CLIP).

PPP Settings

Encapsulation: Select you encapsulation type. (Supplied by your ISP).

Username: Enter the username provided by your ISP.

Password: Enter the password provided by your ISP.

Idle Timeout: Idle timeout means the router will disconnect after being idle for a preset amount of time. The default is 60 seconds. If you set the time to 0, the ISDN connection will remain always connected to the ISP.

Keep Alive: If mode is LCP, This is the Keep Alive timer. If a reply to the LCP echo is not received in this amount of time, the connection is dropped. The Default is 10.

Authentication: Set the required authentication protocol. (Auto/ CHAP/ PAP)

MRU: Maximum Receive Unit indicates the peer of PPP connection the maximum size of the PPP information field this device can be received. The default value is 1492 and is used in the beginning of the PPP negotiation. In the normal negotiation, the peer will accept this MRU and will not send packet with information field larger than this value.

PVC Settings

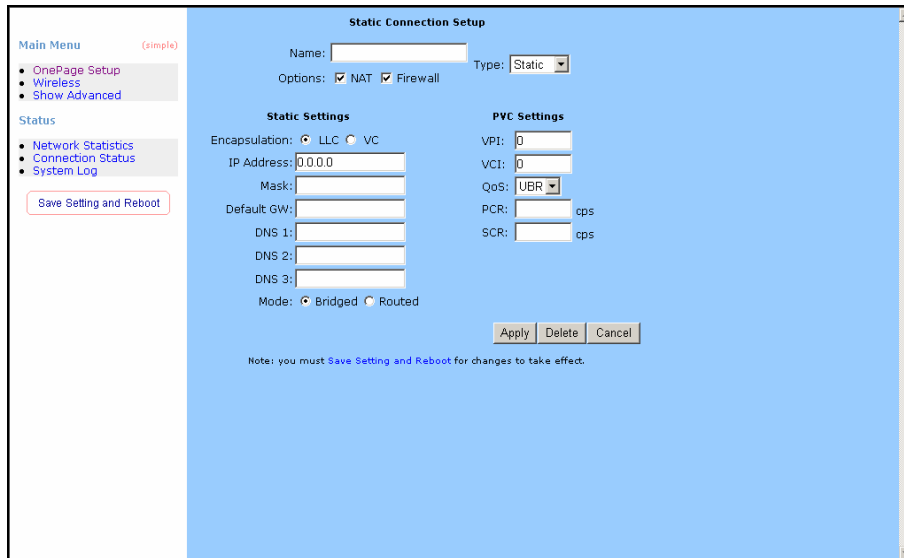

VPI: If instructed to change this, type in the VPI value for the initial connection (using PVC 0). Default = 0.

VCI: If instructed to change this, type in the VCI value for the initial connection (using PVC 0). Default = 0.

QoS: Quality of Service type. Select CBR (Continuous Bit Rate) to specify fixed (always-on) bandwidth for voice or data traffic. Select UBR (Unspecified Bit Rate) for applications that are non-time sensitive, such as e-mail. Select VBR (Variable Bit Rate) for burst traffic and bandwidth sharing with other applications.

PCR: Divide the DSL line rate (bps) by 424 (the size of an ATM cell) to find the Peak Cell Rate (PCR). This is the maximum rate at which the sender can send cells.

SCR: The Sustain Cell Rate (SCR) sets the average cell rate (long-term) that can be transmitted.

Name: Enter the name of your ISP. This information is for identification purposes only.

Type: There six kinds of method (PPPoE/ PPPoA/ Static/ DHCP/ Bridge/ CLIP).

Static Settings

Encapsulation: Select you encapsulation type. (Supplied by your ISP).

IP Address: Private IP address for connecting to a local private network (Default: 192.168.1.1).

Netmask: Netmask for the local private network (Default: 255.255.255.0).

Default Gateway: This field is optional. Enter in the IP address of the router on your network.

DNS: Sets the IP address of the DNS server.

Mode: Bridged and Routed

PVC Settings

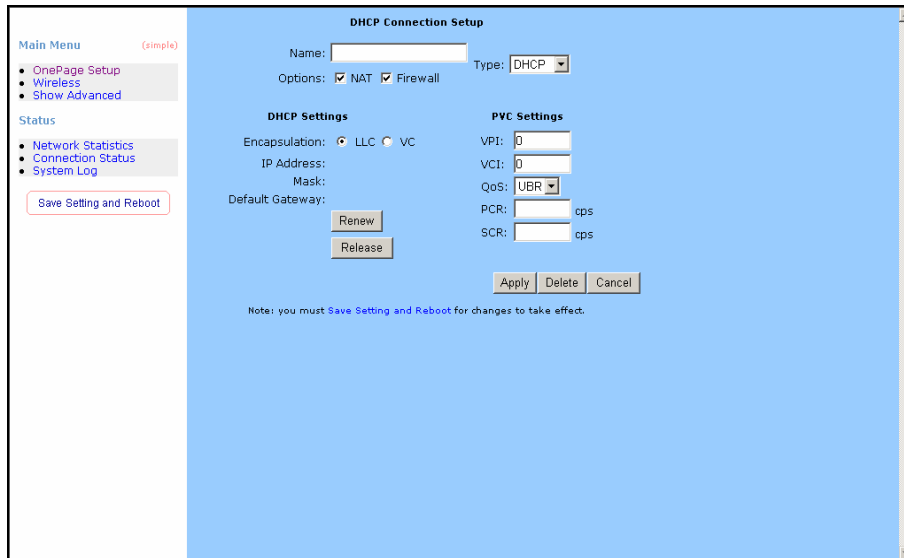

VPI: If instructed to change this, type in the VPI value for the initial connection (using PVC 0). Default = 0.

VCI: If instructed to change this, type in the VCI value for the initial connection (using PVC 0). Default = 0.

QoS: Quality of Service type. Select CBR (Continuous Bit Rate) to specify fixed (always-on) bandwidth for voice or data traffic. Select UBR (Unspecified Bit Rate) for applications that are non-time sensitive, such as e-mail. Select VBR (Variable Bit Rate) for burst traffic and bandwidth sharing with other applications.

PCR: Divide the DSL line rate (bps) by 424 (the size of an ATM cell) to find the Peak Cell Rate (PCR). This is the maximum rate at which the sender can send cells.

SCR: The Sustain Cell Rate (SCR) sets the average cell rate (long-term) that can be transmitted.

Name: Enter the name of your ISP. This information is for identification purposes only.

Type: There six kinds of method (PPPoE/ PPPoA/ Static/ DHCP/ Bridge/ CLIP).

DHCP Settings

Encapsulation: Select you encapsulation type. (Supplied by your ISP).

IP Address: Private IP address for connecting to a local private network (Default: 192.168.1.1).

PVC Settings

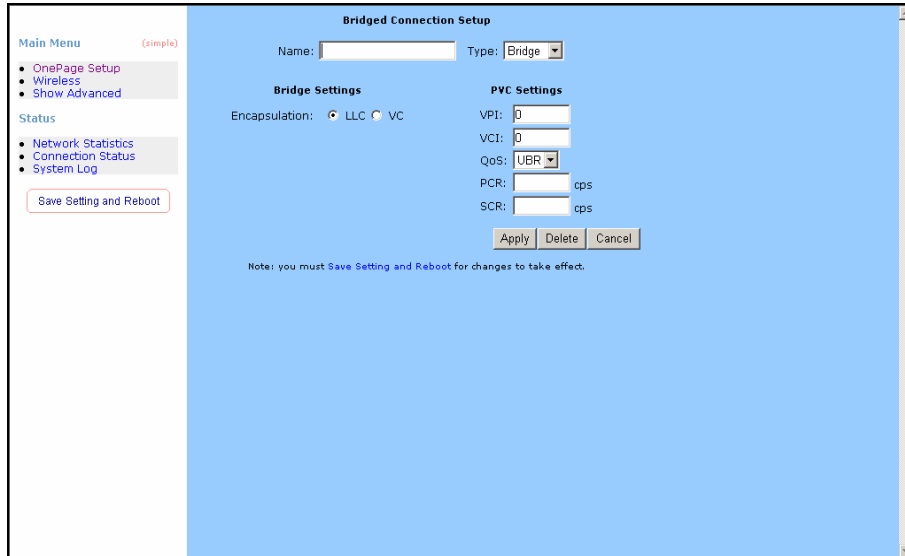

VPI: If instructed to change this, type in the VPI value for the initial connection (using PVC 0). Default = 0.

VCI: If instructed to change this, type in the VCI value for the initial connection (using PVC 0). Default = 0.

QoS: Quality of Service type. Select CBR (Continuous Bit Rate) to specify fixed (always-on) bandwidth for voice or data traffic. Select UBR (Unspecified Bit Rate) for applications that are non-time sensitive, such as e-mail. Select VBR (Variable Bit Rate) for burst traffic and bandwidth sharing with other applications.

PCR: Divide the DSL line rate (bps) by 424 (the size of an ATM cell) to find the Peak Cell Rate (PCR). This is the maximum rate at which the sender can send cells.

SCR: The Sustain Cell Rate (SCR) sets the average cell rate (long-term) that can be transmitted.

Name: Enter the name of your ISP. This information is for identification purposes only.

Type: There six kinds of method (PPPoE/ PPPoA/ Static/ DHCP/ Bridge/ CLIP).

Bridge Settings

Encapsulation: Select you encapsulation type. (Supplied by your ISP).

PVC Settings

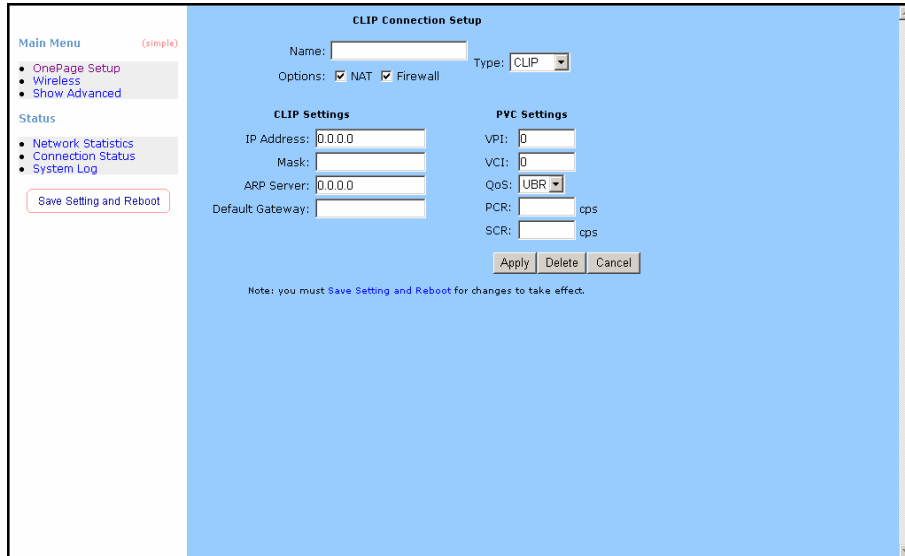

VPI: If instructed to change this, type in the VPI value for the initial connection (using PVC 0). Default = 0.

VCI: If instructed to change this, type in the VCI value for the initial connection (using PVC 0). Default = 0.

QoS: Quality of Service type. Select CBR (Continuous Bit Rate) to specify fixed (always-on) bandwidth for voice or data traffic. Select UBR (Unspecified Bit Rate) for applications that are non-time sensitive, such as e-mail. Select VBR (Variable Bit Rate) for burst traffic and bandwidth sharing with other applications.

PCR: Divide the DSL line rate (bps) by 424 (the size of an ATM cell) to find the Peak Cell Rate (PCR). This is the maximum rate at which the sender can send cells.

SCR: The Sustain Cell Rate (SCR) sets the average cell rate (long-term) that can be transmitted.

Name: Enter the name of your ISP. This information is for identification purposes only.

Type: There six kinds of method (PPPoE/ PPPoA/ Static/ DHCP/ Bridge/ CLIP).

CLIP Settings

IP Address: Private IP address for connecting to a local private network (Default: 192.168.1.1).

Netmask: Netmask for the local private network (Default: 255.255.255.0).

ARP Server: Translating an IP address to an ATM address.

Default Gateway: This field is optional. Enter in the IP address of the router on your network.

PVC Settings

VPI: If instructed to change this, type in the VPI value for the initial connection (using PVC 0). Default = 0.

VCI: If instructed to change this, type in the VCI value for the initial connection (using PVC 0). Default = 0.

QoS: Quality of Service type. Select CBR (Continuous Bit Rate) to specify fixed (always-on) bandwidth for voice or data traffic. Select UBR (Unspecified Bit Rate) for applications that are non-time sensitive, such as e-mail. Select VBR (Variable Bit Rate) for burst traffic and bandwidth sharing with other applications.

PCR: Divide the DSL line rate (bps) by 424 (the size of an ATM cell) to find the Peak Cell Rate (PCR). This is the maximum rate at which the sender can send cells.

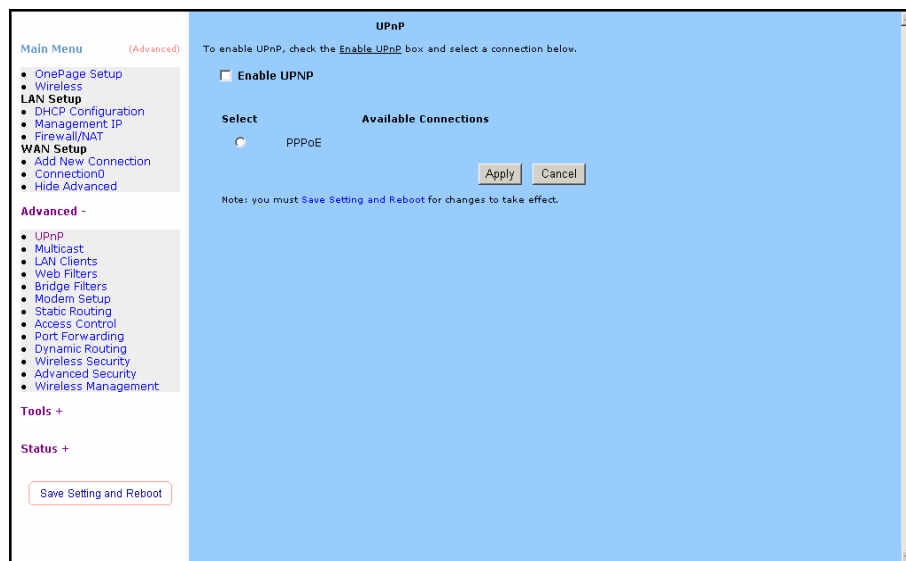

SCR: The Sustain Cell Rate (SCR) sets the average cell rate (long-term) that can be transmitted.

Apply: Click Apply to save the changes.

Advanced

UPnP

Universal Plug and Play (UPnP) is a distributed, open networking standard that uses TCP/IP for simple peer-to-peer network connectivity between devices. A UPnP device can dynamically join a network, obtain an IP address, convey its capabilities and learn about other devices on the network. In turn, a device can leave a network smoothly and automatically when it is no longer in use.

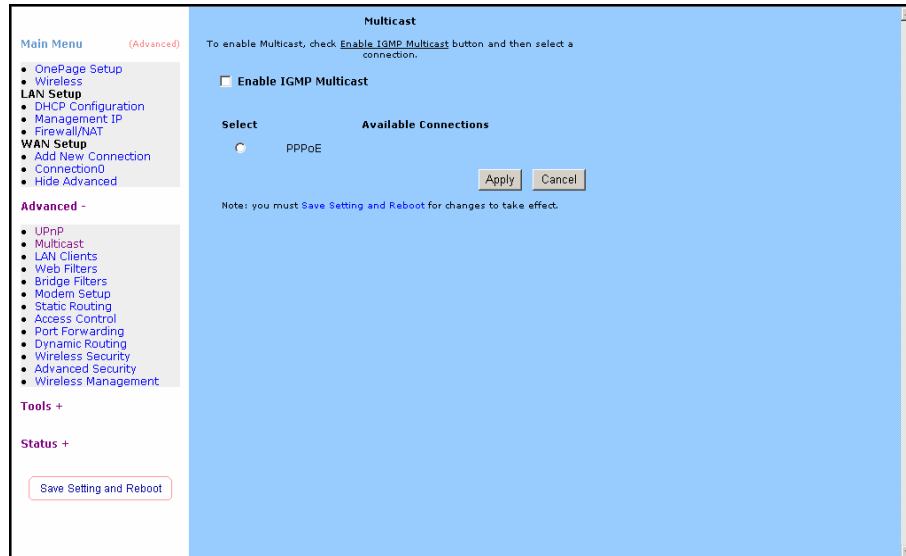

Enable UPnP: Enable the UPnP.

Apply: Click Apply to save the changes.

Multicast

The NSP is capable of proxying for applications that are using multicast IP for accessing Video content. This application needs to be run when NAT is enabled.

Enable IGMP Multicast: Enable or Disable IGMP Multicast.

Apply: Click Apply to save the changes.

LAN Clients

The LAN Clients page allows you to set the configuration for the LAN port.

The screenshot shows a web interface for configuring LAN Clients. On the left is a navigation menu with categories: Main Menu (Advanced), LAN Setup, WAN Setup, Advanced, Tools, and Status. The LAN Setup menu is expanded, showing options like DHCP Configuration, Management IP, Firewall/NAT, etc. The LAN Clients page has a light blue background. At the top, there are two input fields: 'New IP Address:' and 'Hostname:'. Below these are two sections: 'Static Addresses' and 'Dynamic Addresses'. The 'Dynamic Addresses' section contains a table with columns: Reserve, IP Address, Hostname, and Type. There are two rows of data, each with a checkbox in the 'Reserve' column. The first row has IP 192.168.1.2, Hostname michelle1, and Type Dynamic. The second row has IP 192.168.1.4, Hostname fae, and Type Dynamic. At the bottom of the table are 'Apply' and 'Cancel' buttons. A note at the bottom of the page states: 'Note: you must Save Setting and Reboot for changes to take effect.' At the bottom left of the interface is a 'Save Setting and Reboot' button.

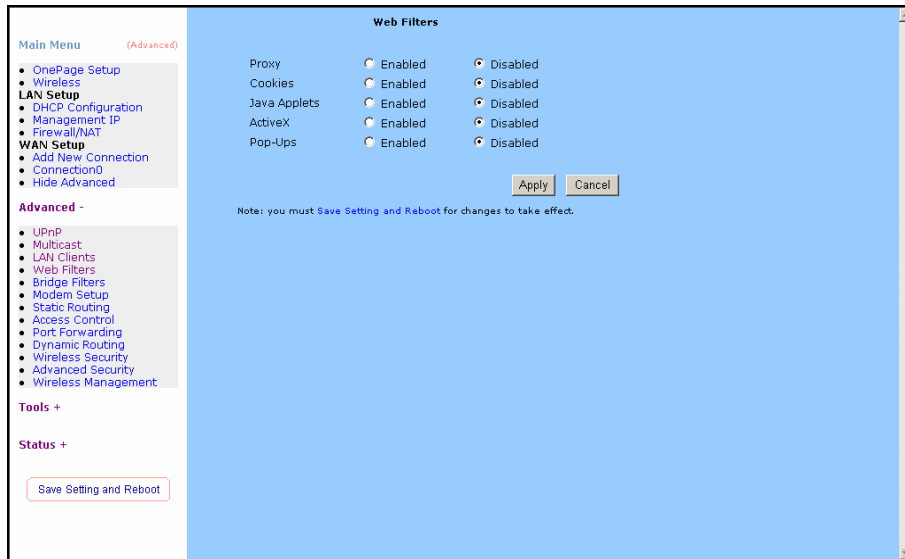

New IP Address: Enter the IP Address.

Hostname: Enter the Hostname.

Apply: Click Apply to save the changes.

Web Filters

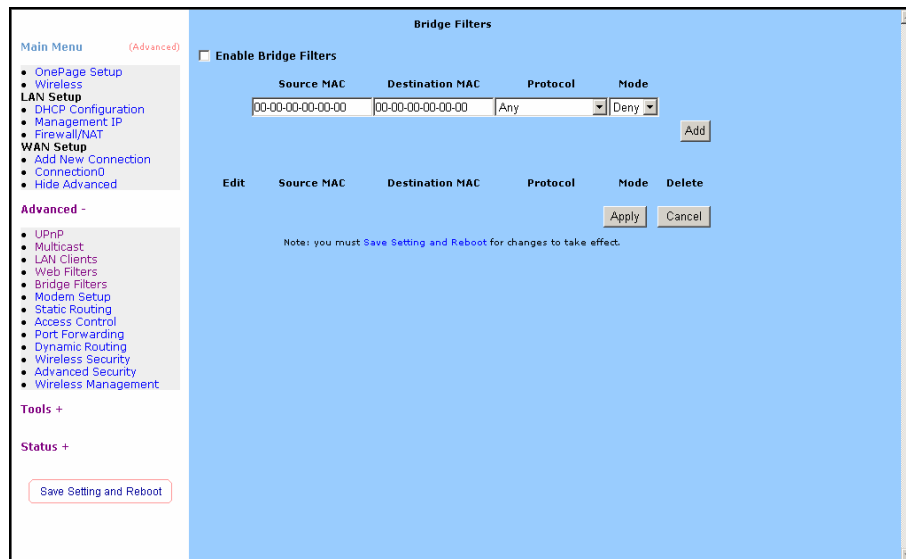

The following queries manage the Content Filtering capabilities of the NSP.

Apply: Click Apply to save the changes.

Bridge Filters

The bridge filtering page allows users to set the configuration of IP filtering.

Source MAC: When the bridge filtering is enabled, enter the Source MAC address, select **Block** and click **Add**. Then all incoming WAN and LAN Ethernet packets matched with this source MAC address will be filtered out. If the **Forward** is selected, then the packets will be forwarded to the destination PC.

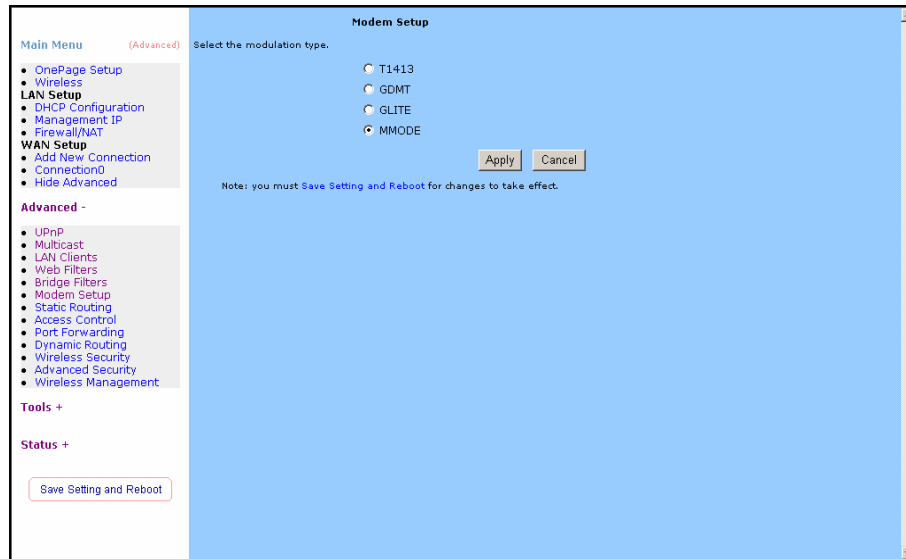

Destination MAC: When the bridge filtering is enabled, enter the Destination MAC address, select **Block** and click **Add**. Then all incoming WAN and LAN Ethernet packets matched with this destination MAC address will be filtered out. If the **Forward** is selected, then the packets will be forwarded to the destination PC.

Type: Enter the hexadecimal number for the Ethernet type field in Ethernet_II packets. For example, 0800 is for IP protocol.

Apply: Click Apply to save the changes.

Modem Setup

Select ADSL Transmission Rate.

T1413: Full-Rate (ANSI T1.413 Issue 2) with line rate support of up to 8 Mbps downstream and 832 Kbps upstream.

GDMT: Full-Rate (G.dmt, G992.1) with line rate support of up to 8 Mbps downstream and 832 Kbps upstream.

GLITE: G.lite (G.992.2) with line rate support of up to 1.5 Mbps downstream and 512 Kbps upstream.

MMODE: Support Multi-Mode standard (ANSI T1.413 Issue 2; G.dmt(G.992.1); G.lite(G.992.2)).

Apply: Click Apply to save the changes.

Static Routing

The following queries manage the RIP routing application and static routing entries for the NSP. The RIP application supports both version 1 and 2.

The screenshot shows a web-based configuration interface for Static Routing. On the left is a navigation menu with categories like 'Main Menu (Advanced)', 'LAN Setup', 'WAN Setup', 'Advanced -', 'Tools +', and 'Status +'. The 'Static Routing' page is active, displaying a form to add a new static route. The form includes a dropdown menu for 'Choose a connection:' set to 'PPPoE', and input fields for 'New Destination IP:', 'Mask:' (pre-filled with '255.255.255.0'), 'Gateway:', and 'Metric:' (pre-filled with '0'). Below the form is a table with columns 'Connection', 'Destination IP', 'Mask', 'Gateway', 'Metric', and 'Delete'. An 'Apply' button and a 'Cancel' button are positioned below the table. A note at the bottom of the form states: 'Note: you must Save Setting and Reboot for changes to take effect.' At the bottom left of the interface, there is a 'Save Setting and Reboot' button.

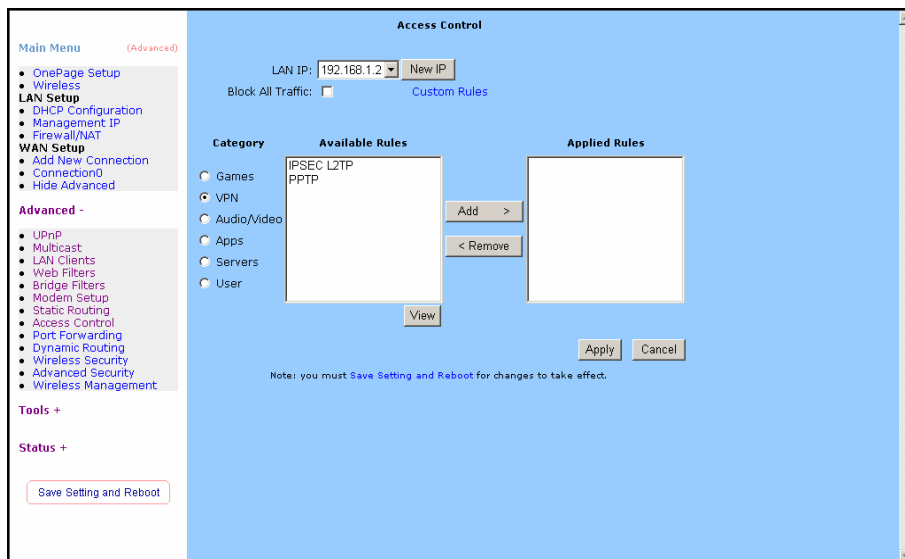

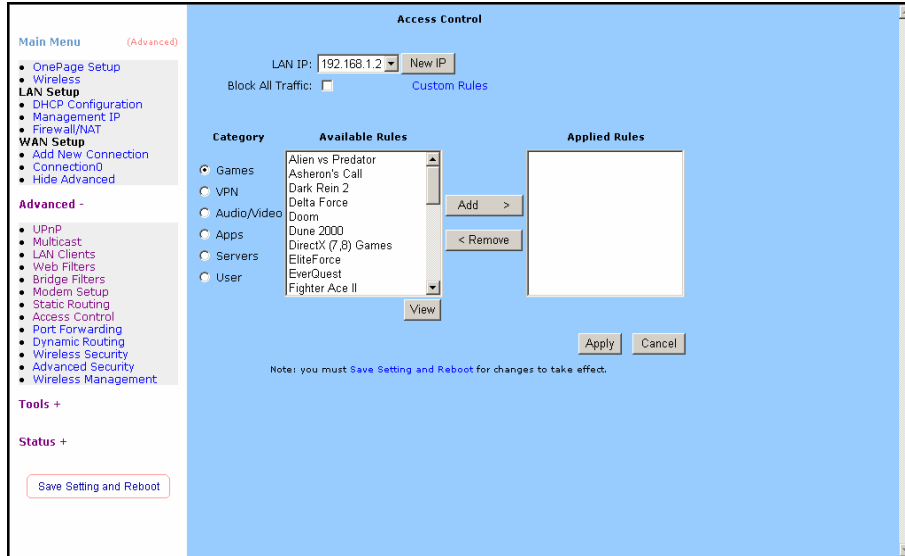

New Destination IP: Enter the New Destination IP.

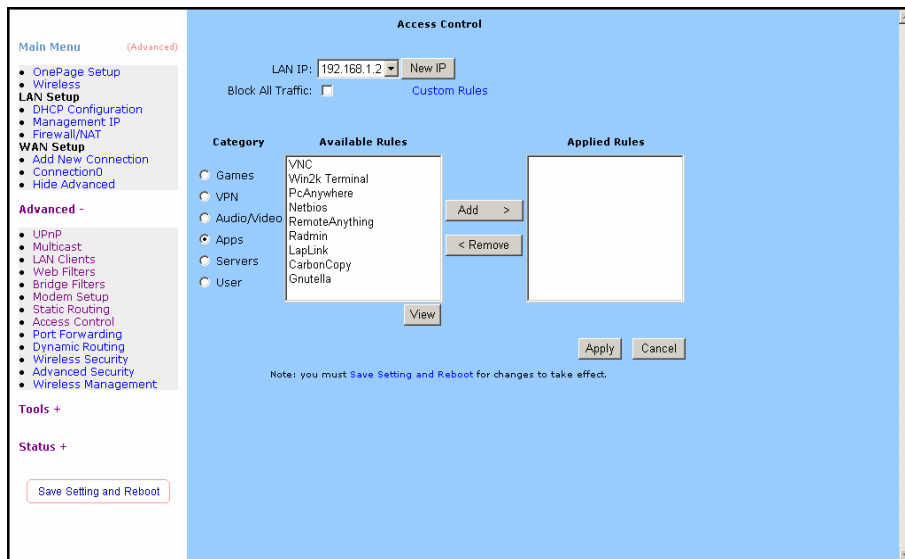

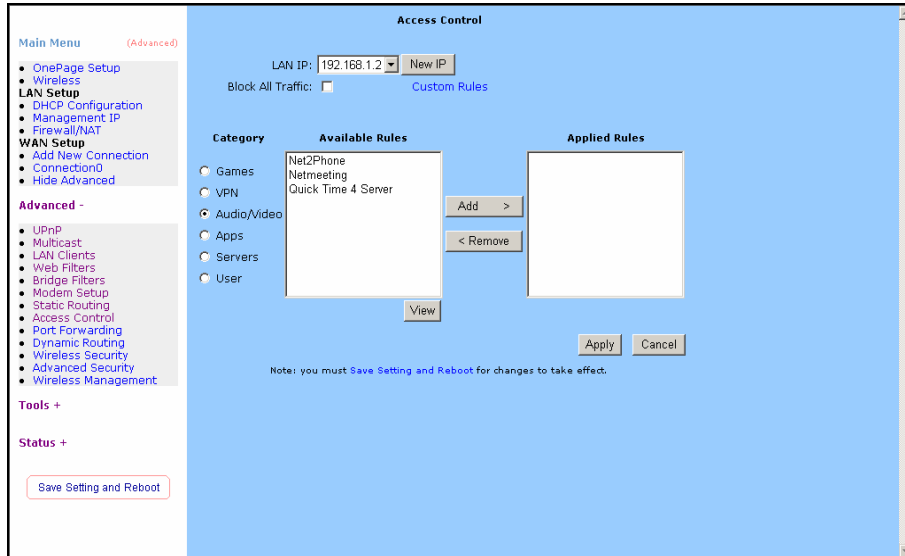

Gateway: Enter the IP Address of the Gateway.

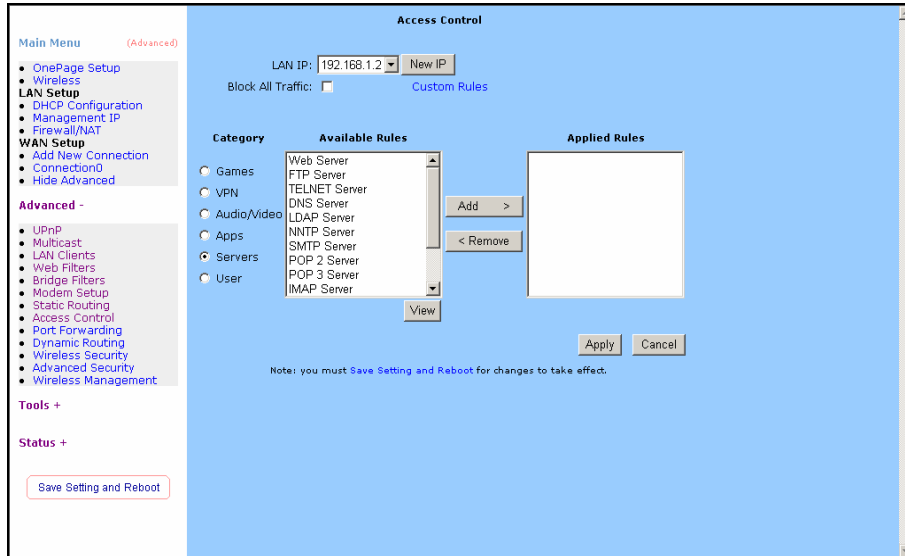

Apply: Click Apply to save the changes.

Access Control

Access Control allows users to define the outgoing traffic permitted or denied access through the WAN interface. The default is to permit all outgoing traffic.

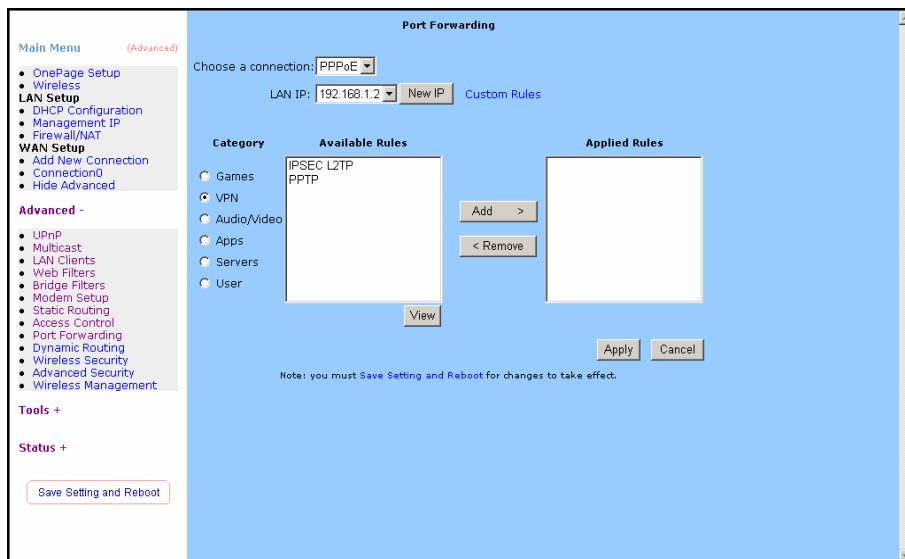

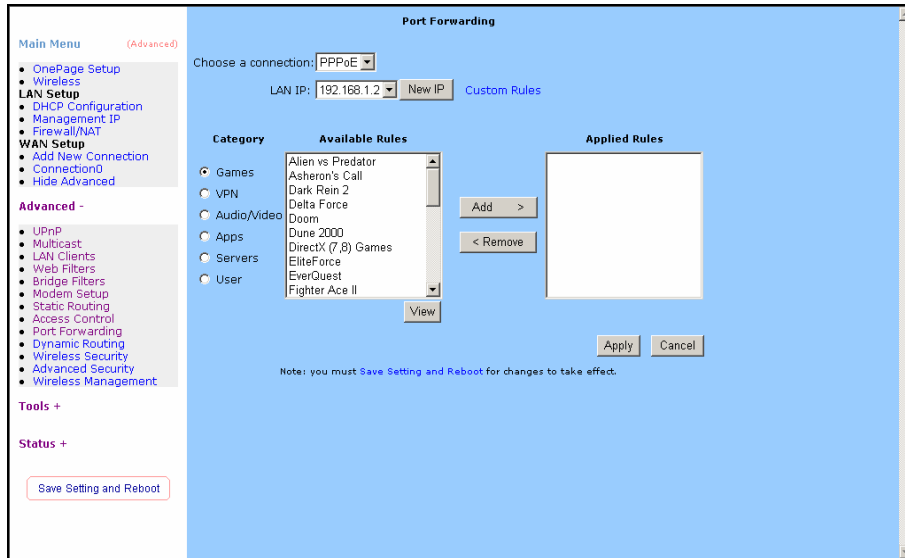

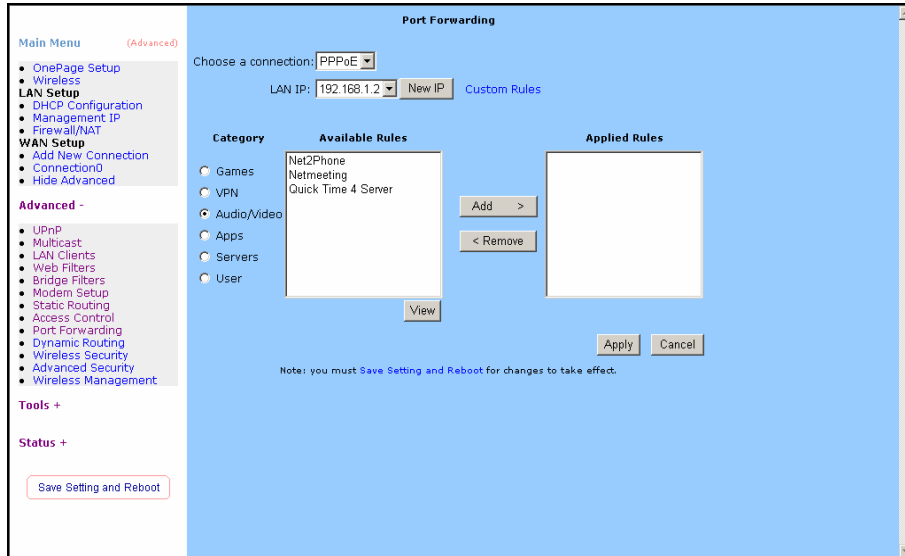

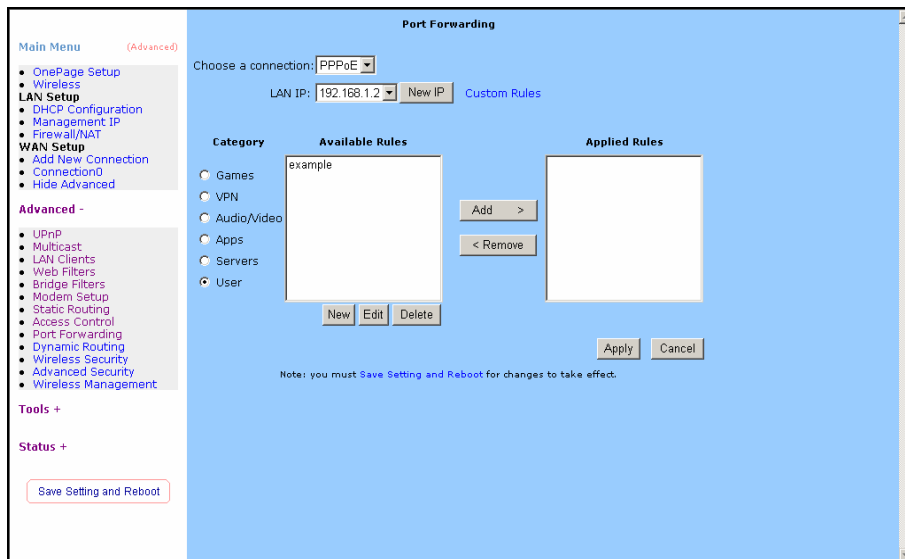

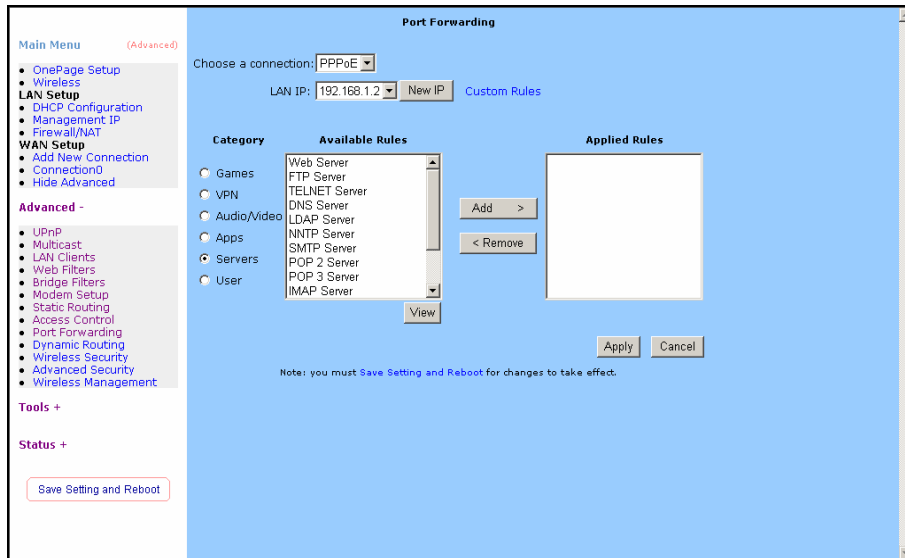

Apply: Click Apply to save the changes.

Port Forwarding

The Port Forwarding page allows the user define a port forwarding rule without using the firewall policy database definitions and apply it to the connection.

Choose a connection: You can choose a connection to do this.

LAN IP: type your LAN IP. For example 192.168.1.2.

Apply: Click Apply to save the changes.

Dynamic Routing

The following queries manage the RIP routing application and static routing entries for the NSP. The RIP application supports both version 1 and 2.

The screenshot shows a web-based configuration interface for Dynamic Routing. On the left is a navigation menu with categories: Main Menu (Advanced), LAN Setup, WAN Setup, Advanced, Tools, and Status. The main content area is titled "Dynamic Routing" and contains the following settings:

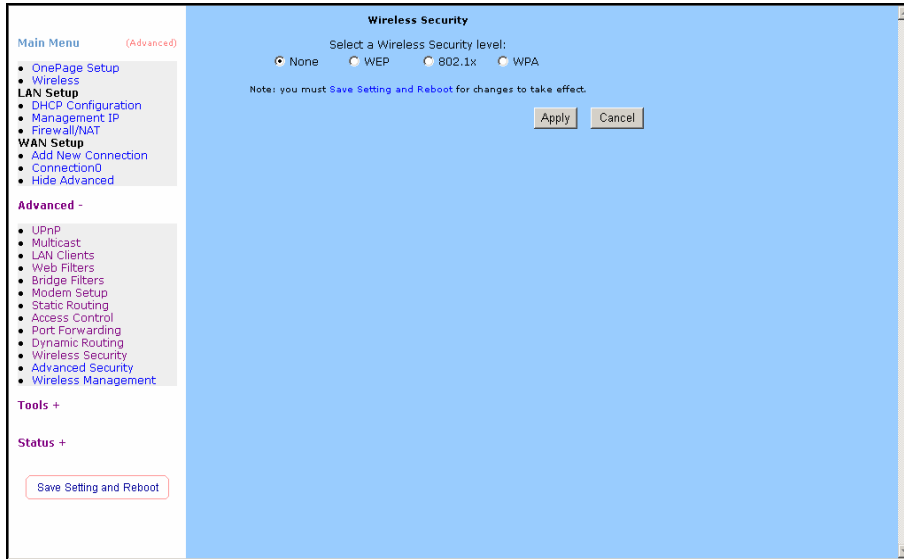

- Enable RIP
- Protocol: RIP v2 (dropdown)
- Direction: Both (dropdown)
- Enable Password
- Password: **** (text input)

Buttons for "Apply" and "Cancel" are located below the password field. A note at the bottom of the main area states: "Note: you must Save Setting and Reboot for changes to take effect." At the bottom left of the interface, there is a button labeled "Save Setting and Reboot".

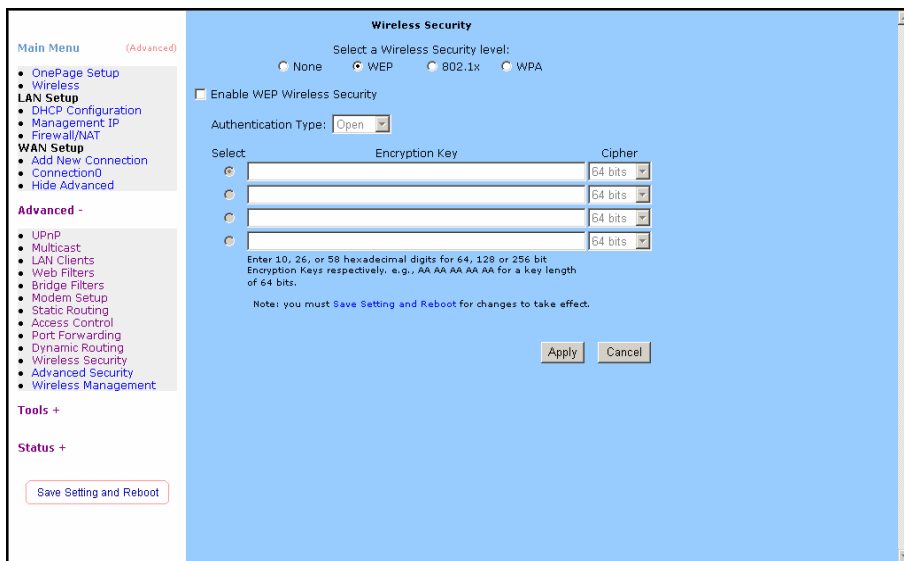

Apply: Click Apply to save the changes.

Wireless Security

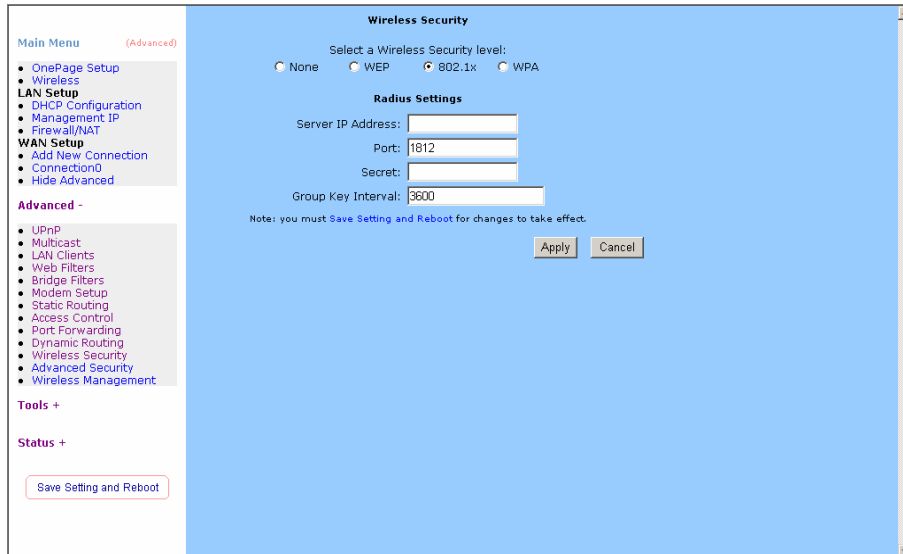

Select a Wireless Security level

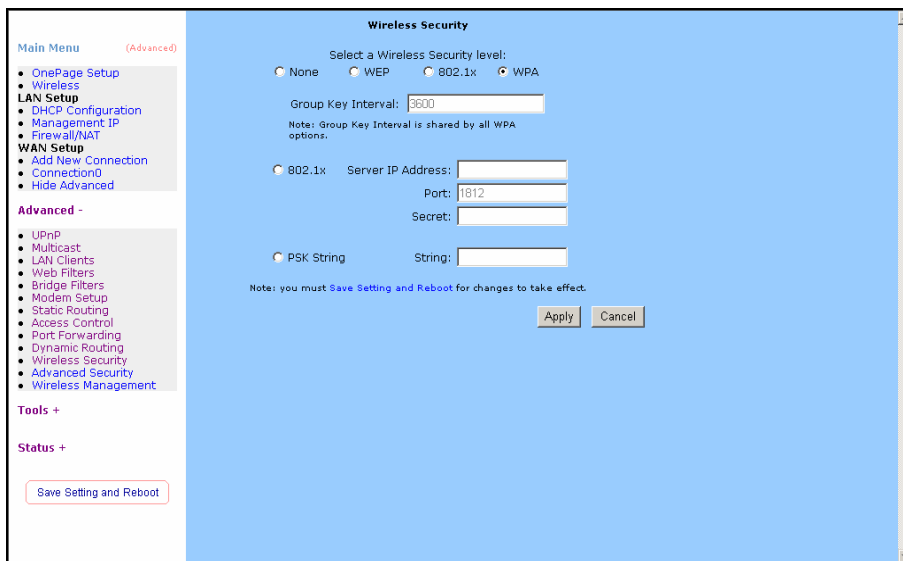

None: Disable Wireless encryption.

WEP: WEP encryption scrambles the data transmitted between the wireless stations and the access points to keep network communications private. It encrypts unicast and multicast communications in a network. Both the wireless stations and the access points must use the same WEP key for data encryption and decryption.

802.1x: The IEEE 802.1x standards outline enhanced security methods for both the authentication of wireless stations and encryption key management.

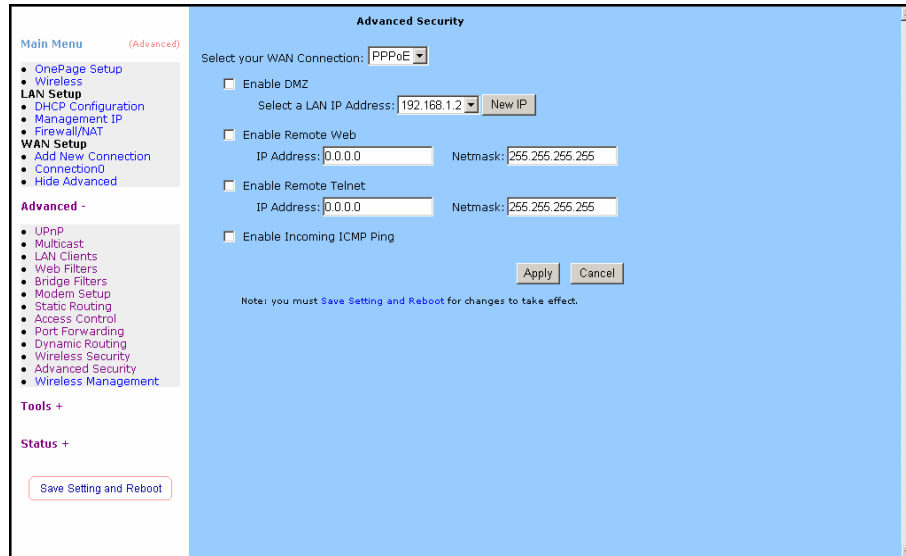

WPA: Wi-Fi Protected Access (WPA) is a subset of the IEEE 802.11i security specification draft. Key differences between WPA and WEP are user authentication and improved data encryption.

Apply: Click Apply to save the changes.

Advanced Security

The Advanced Security page provides advanced rules that can be applied to a particular Connection.

Enable DMZ: Enable or Disable DMZ.

Enable Remote Web: Allow or deny incoming access to the modems Web pages remotely.

Enable Remote Telnet: Allow or deny incoming access to the modems Telnet Interface remotely.

Enable Incoming ICMP Ping: Allow or deny incoming Pings to the Modem.

Apply: Click Apply to save the changes.

Wireless Management

The Wireless Management page allows your prestige can check the MAC addresses of Wireless stations against a list of allowed or denied MAC addresses.

The screenshot displays the 'Wireless Management' interface. On the left is a navigation menu with sections: 'Main Menu (Advanced)', 'LAN Setup', 'WAN Setup', 'Advanced -', 'Tools +', and 'Status +'. The 'Advanced -' section is expanded, showing various settings like UPnP, Multicast, LAN Clients, etc. The main content area is titled 'Wireless Management' and has three tabs: 'Access List', 'Associated Stations', and 'Multiple SSID'. The 'Access List' tab is active. It contains a checkbox for 'Enable Access List', which is currently unchecked. Below it are radio buttons for 'Allow' and 'Ban'. A 'Mac Address:' input field is followed by an 'Add' button. There are also 'Delete' and 'Mac Address' links. A note states: 'Note: you must Save Setting and Reboot for changes to take effect.' At the bottom right of the main area are 'Apply' and 'Cancel' buttons. At the bottom left of the page is a 'Save Setting and Reboot' button.

Enable Access List: Enable the Wireless Management by Access List.

MAC Address: Enter the MAC Address.

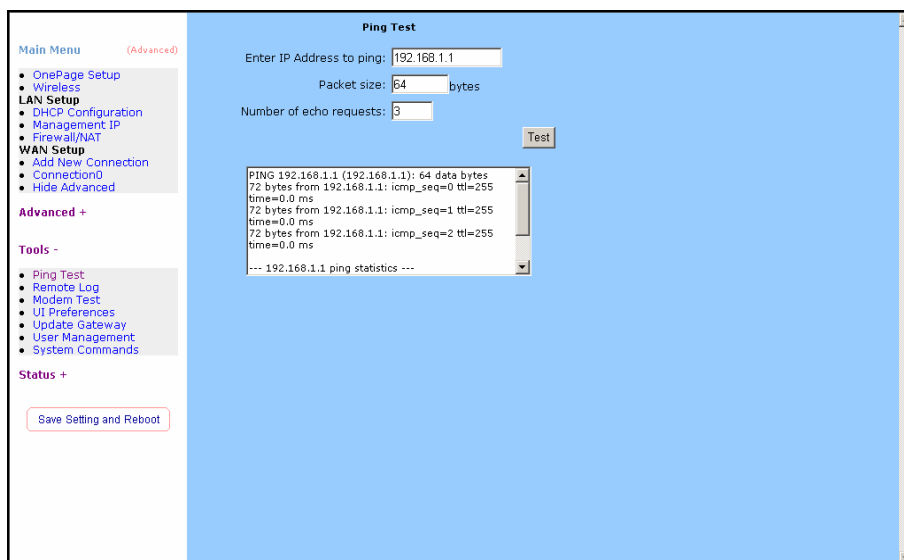

Apply: Click Apply to save the changes.

Tools

The Tools section allows you to save the configuration, restart the gateway, update the gateway firmware, setup user and remote log information and run Ping and Modem tests.

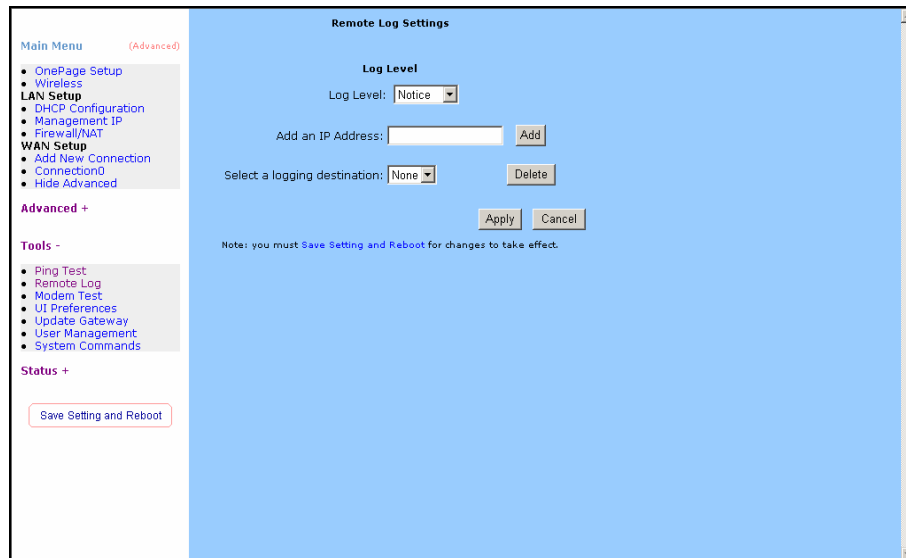

Ping Test

Packet Internet Groper is protocol that sends out ICMP echo requests to test whether or not a remote host is reachable.

Remote Log

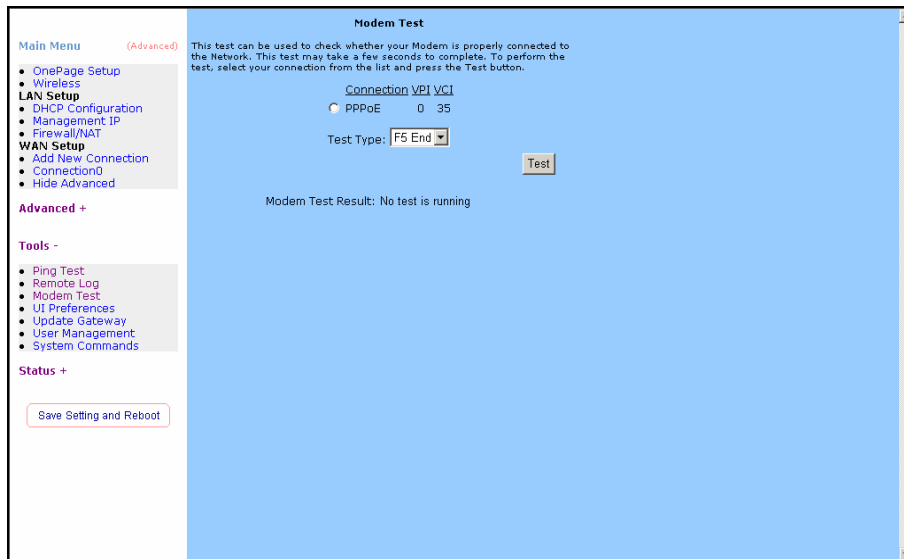

The Router Table page displays routing table and allows the user to manually enter the routing entry. The routing table will display the routing status of Destination, Netmask, Gateway and Interface. The interface br0 means the USB interface; lo0 means the loopback interface and ppp1 means the PPP interface. The Gateway is the learned Gateway.

Apply: Click Apply to save the changes.

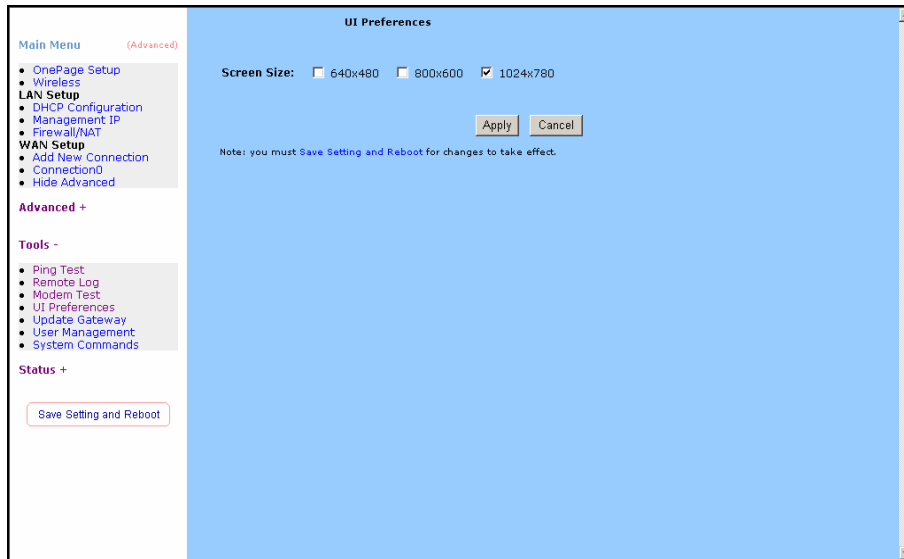

Modem Test

This test can be used to check whether your Modem is properly connected to the Network. This test may take a few seconds to complete. To perform the test, select your connection from the list and press the Test button.

UI Preferences

The UI preferences page allows user to set screen size.

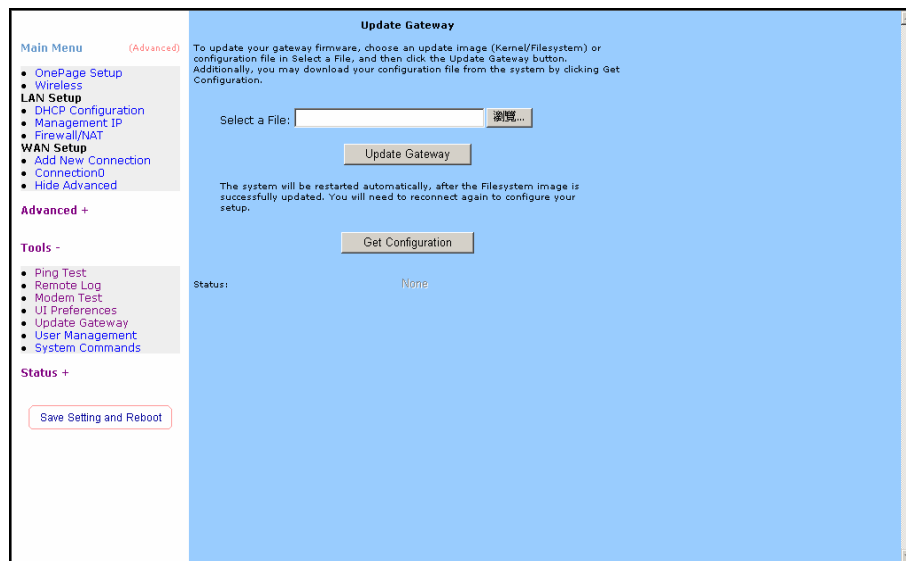

Apply: Click Apply to save the changes.

Update Gateway

To update your gateway firmware, choose an update image (Kernel/ File system) or configuration file in Select a File, and then click the Update Gateway button.

Additionally, you may download your configuration file from the system by clicking Get Configuration.

User Management

User Management is used to change your User Name or Password.

The screenshot shows a web interface for 'User Management'. The main content area is light blue and contains the following fields and controls:

- User Name:** A text input field containing 'Admin'.
- Password:** A password input field.
- Confirmed Password:** A second password input field.
- Idle Timeout:** A numeric input field set to '30' followed by the text 'minutes'.
- Buttons:** 'Apply' and 'Cancel' buttons.
- Note:** A message stating 'Note: you must Save Setting and Reboot for changes to take effect.'

The left sidebar contains a navigation menu with the following sections:

- Main Menu (Advanced):**
 - OnePage Setup
 - Wireless
 - LAN Setup**
 - DHCP Configuration
 - Management IP
 - Firewall/NAT
 - WAN Setup**
 - Add New Connection
 - Connection0
 - Hide Advanced
- Advanced +**
- Tools -**
 - Ping Test
 - Remote Log
 - Modem Test
 - UI Preferences
 - Update Gateway
 - User Management
 - System Commands
- Status +**

At the bottom of the sidebar, there is a button labeled 'Save Setting and Reboot'.

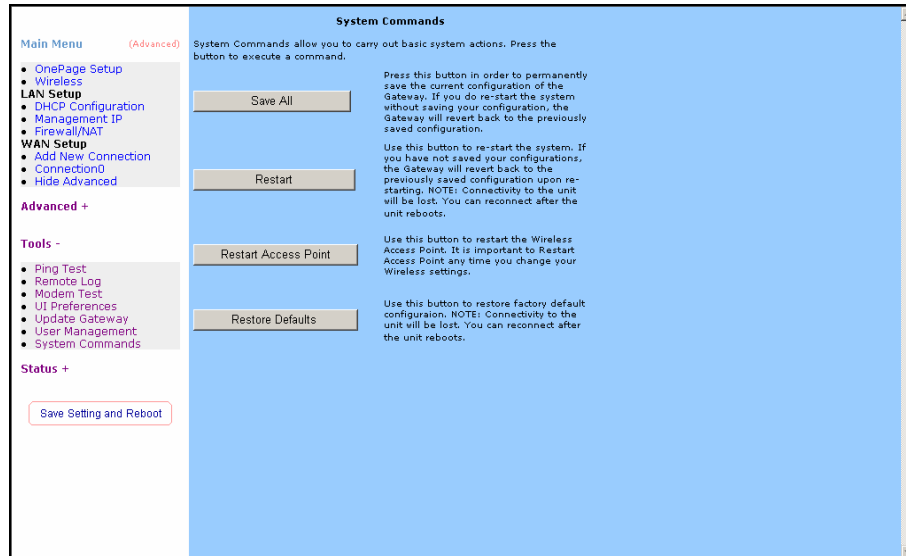

User Name: Default is 'Admin'.

Password: Default is 'Admin'.

Apply: Click Apply to save the changes.

System Commands

System commands allow you to carry out basic system actions. Press the button to execute a command.

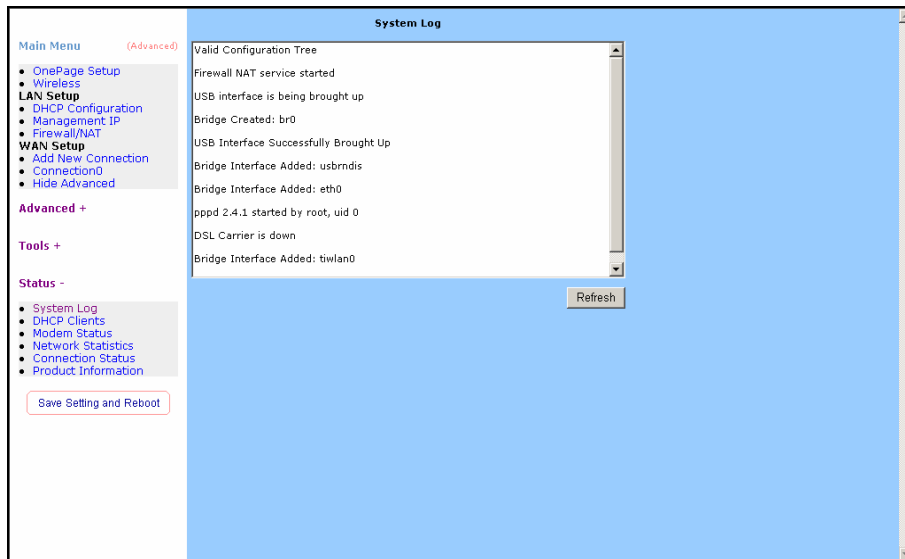

Status

The Status section allows you to view the Status/Statistics of different connections and interfaces.

System Log

The System Log page shows the events triggered by the system.

DHCP Clients

The DHCP Clients page shows the MAC Address, IP Address, Host Name and Lease Time.

DHCP Clients			
MAC Address	IP Address	Host Name	Lease Time
00:11:2f:0f:71:6f	192.168.1.2	michelle1	0 days 0:47:25
00:50:fc:89:36:df	192.168.1.4	fae	0 days 0:30:7

Product Information

The Product Information page shows the product information and software versions.

The screenshot shows a web interface for 'Product Information'. On the left is a navigation menu with sections: 'Main Menu (Advanced)', 'LAN Setup', 'WAN Setup', 'Advanced +', 'Tools +', and 'Status -'. The 'Product Information' page content is displayed in a blue area on the right. It is divided into two sections: 'Product Information' and 'Software Versions'. The 'Product Information' section lists Model Number (AR7WRD), HW Revision (Unknown), Serial Number (none), Ethernet MAC (00:09:F3:00:00:00), DSL MAC (N/A), and AP MAC (00:50:f1:12:00:00). The 'Software Versions' section lists Gateway (3.3.1), ATM Driver (4.01.00.00), DSL HAL (1.01.00.00), DSL Datapump (1.01.00.00 Annex A), SAR HAL (01.06.06), PDSP Firmware (0.49), Wireless Firmware (0.3.16.13), Wireless APDK (5.5.20), Wireless Driver (1.1.2), and Boot Loader (0.22.02). A 'Save Setting and Reboot' button is located at the bottom of the left sidebar.

Product Information	
Model Number	AR7WRD
