

PIM-222

(standard configuration)

Dual 12-Inch Two-Way System for Permanent Installation, Horn Loaded HF

- Part of PI Matrix Series™—compact trapezoidal systems for permanent installation
- Components and physical characteristics optional, to meet many acoustic, architectural and mechanical requirements
- 50-Hz low end for speech and many music applications
- Stacked 12-inch woofers provide high mid-band directivity—for higher intelligibility in difficult acoustics
- Three HF coverages—60° x 40° (standard), 60° x 60° or 90° x 40°
- PRO™ circuit HF protection
- For bi-amplification (standard); passive network optional
- Integral suspension system for safe and easy installation

SPECIFICATIONS

Versions Available:

See PIM-222 ordering matrix (Figure 1)

Typical Axial Frequency Response with Presets of Dx34 Digital Speaker System Processor (swept sine-wave input, anechoic environment, 4 volts at 1 kHz at 10 feet; see Figure 2):

50-18,000 Hz

Net Weight:

49.4 kg (109 lb)

Shipping Weight:

55.5 kg (122 lb)

DESCRIPTION AND APPLICATIONS

The Electro-Voice PIM-222 is a compact, trapezoidal two-way speaker system for permanent installation. The high-frequency section is horn loaded and the low-frequency section is direct radiating in an optimally vented enclosure. The

PIM-222 is part of the PI Matrix Series™, a highly flexible group of full-range and low-frequency systems for applications where compact systems are appropriate. Many performing arts centers, clubs, auditoriums, sports facilities and houses of worship are candidates for the PI Matrix Series™.

The flexibility of the PI Matrix Series™ allows the designer to customize a system to both suit the acoustic environment and meet a wide variety of architectural and mechanical requirements. High-frequency horns have been optimally sized to maintain their rated coverage patterns down to the chosen crossover frequencies and over as wide a frequency range as possible. Furthermore, the horns are optionally available in three coverage angles (90° x 40°, 60° x 40° and 60° x 60°) to aid in properly matching a speaker location to the audience area. In addition, all horns may be rotated about their axes, for coverage that is independent of enclosure orientation.

Other PI Matrix Series™ options include low- and high-frequency drivers, enclosure materials and finish, grilles, suspension hardware and input-panel connections, giving the sound contractor or consultant literally thousands of combinations to satisfy the overall system design criteria.

The PIM-222 standard configuration is a 60° x 40° two-way full-range system for bi-amplification. It features two stacked, 12-inch woofers in an optimally vented enclosure for increased intelligibility. The PIM-222 maintains good directivity control down to 600 Hz (see Figure 4). The low-frequency section incorporates two DL12X 305-mm (12-in.) woofers. The angled enclosure sides (15°) allow ceiling or under-balcony mounting with a reduced vertical profile and an aiming angle that is inherently in the general direction of the audience. The enclosure is made of black painted 7-ply void-free birch and includes certified flying hardware as standard.

Delivering smooth and extended performance, the high-frequency section operates from 1,200 to 18,000 Hz and consists of a DH1A compression driver coupled to an HP64S 60° x 40° constant-directivity horn. The HP64S horn features integral fiberglass-and-zinc construction for exceptional strength and performance. Beamwidth-control vanes in the horn throat correct all coverage anomalies in the 10- to 20-kHz octave. The driver is protected from over-drive by the solid-state, self-resetting PRO™ circuit, which drops the input signal by 6 dB. Additional protection at the low end of the driver's range is provided by a series blocking capacitor with a corner frequency of 800 Hz.

The low-frequency section operates between 50 and 1,200 Hz and has been designed for superior performance. The dual DL12X woofers can handle very large levels of input power, producing high acoustic output with relatively low distortion and closely matching the output levels of the high-frequency section.

The PIM-222 is equipped with a number of additional features to make operation and installation easy and secure. A proprietary structural extrusion is incorporated into the enclosure, providing safe and flexible suspension (see Suspending PIM-222 Enclosures section). Up to two enclosures of the same footprint can be suspended without additional support (as long as the lower system is not heavier than the upper system), so arrays can be created quickly and easily. The grille is composed of vibration-resistant steel for excellent driver protection, and an optional foam cover can be added for better protection when used outdoors. Besides the standard black-painted finish, the enclosure can also be ordered primed in white for painting with ordinary paints, unfinished for staining or with our special Wolverine® weather-

resistant finish for outdoor applications. All drivers on the PIM-222 can be serviced from the front of the enclosure.

A complete listing of all system options is shown in Figure 1.

SUSPENDING PIM-222 ENCLOSURES

Suspending any object is potentially dangerous and should be attempted only by individuals who have a thorough knowledge of the techniques and regulations of hanging overhead. Electro-Voice strongly recommends that the PIM-222 be suspended taking into account all current national, federal, state and local regulations. It is the responsibility of the installer to ensure that the PIM-222 is safely installed in accordance with all such regulations. If the PIM-222 is suspended, Electro-Voice strongly recommends that the system be inspected at least once a year. If any sign of weakness or damage is detected, remedial action should be taken immediately.

The PI Matrix Series™ enclosures are suspended using the following approach, which has been approved by an independent structural engineer. Every enclosure incorporates six independent suspension points, three on the top and three on the bottom. A minimum of three points must be used at all times to suspend the enclosure. The suspension points, which "tie" the top and sides of the enclosure together, are made of structural aluminum. Each suspension point mates to an Ancra 42546-10 locking fitting (four are supplied with each enclosure ordered with this option, EV #20562), and each point has a break strength of 907 kg (2,000 lb) in any direction.¹ A maximum of two enclosures can be "daisy chained" together, allowing the construction of vertical arrays. This also applies to other PIM models with the same footprint, as long as the lower system is no heavier than the upper system. If the lower system is heavier, or if longer arrays are required, provision must be made to independently suspend each enclosure. The Ancra 42546-10 fitting incorporates a safety pin to prevent accidental release, and it should be engaged at all times.

ROTATING THE HIGH-FREQUENCY HORN

The PIM-222 high-frequency horn may be easily rotated about its major axis, providing coverage independent of enclosure orientation. First remove the enclosure grille, then the horn. Both are affixed with Phillips-head screws (use a #2 Phillips screwdriver). Rotate the horn 90° about its axis and reinstall the components.

CONNECTIONS

The option ordered, biamped or passive crossover with either barrier strip or Neutrik Speakon® connectors, will determine the wiring of the system components.

Biamped Input

If the system is biamped with barrier strips, each frequency section can be individually accessed via #10 screw terminals as marked on the input panel. If Neutrik Speakon® connectors are used, pins 1+1- are wired to the low-frequency driver and pins 2+2- to the high-frequency section. The high-frequency section incorporates a low-frequency blocking capacitor with a 3-dB-down point of 800 Hz and PRO™ circuit autoresetting overload protection.

Passive Crossover Input

If the passive crossover option is used, both barrier strips are wired in parallel and pins 1+1- on both Neutrik Speakon® connectors are wired in parallel.

In all cases, drivers are connected with the same polarity. A positive voltage applied to the positively marked terminal produces a positive acoustic pressure at the front of the system.

¹ For additional information, contact Ancra International at 606/371-7272 or toll free (within U.S. only) at 800/233-5138.

CROSSOVER, EQ AND SIGNAL DELAY

The PIM-222 is a two-way system which must be biamped with a separate active crossover. A 1,200-Hz crossover frequency is recommended. Optimum performance and reliability are provided by 24-dB-per-octave slopes. 12-dB-per-octave slopes are the minimum recommended. The low-frequency section should have subpassband protection using a high-pass filter set at about 30 Hz. No signal delay or further EQ is mandatory but their use can smooth response and directivity, particularly in the region of crossover. The high-frequency section requires the appropriate constant-directivity-horn high-frequency boost EQ for flat response.

The Dx34 digital speaker system processor can be set to provide subpassband protection, crossover, EQ and signal delay for optimum performance of the PIM-222. Contact Electro-Voice for the specific parameter settings. Alternatively, the XEQ-2 or XEQ-3 analog crossover/equalizer/delay networks can be used. High-frequency horn EQ is provided by plug-in modules, the specific model of which is determined by the horn model. The XEQ engineering data sheets provide this specific information.

LOW-FREQUENCY ENHANCEMENT

If it is desirable to enhance low-frequency performance, Electro-Voice recommends, depending on installation requirements, the PIM-151 or PIM-251 PI Matrix Series™ systems as well as any of the TL series or MTL series of Manifold Technology® systems. Contact Electro-Voice for information on these systems.

FREQUENCY RESPONSE

PIM-222 axial frequency responses were measured in Electro-Voice's large anechoic chamber at a distance of 3.0 meters (10 feet) with swept sine-wave input. Figure 2 shows the typical overall system response with presets of the Dx34 digital speaker system processor. Speaker drive voltage is 4 volts at 1 kHz. Figure 3 shows the responses of the individual low- and high-frequency sections with a 4-volt drive, normalized for a 1-watt input and a 1-meter distance.

DIRECTIVITY

The directional characteristics of the PIM-222 were measured in Electro-Voice's large anechoic chamber, with a test signal of one-third-octave filtered pink noise at the frequencies indicated. Presets for the Dx34 digital speaker system processor were employed. A full spherical measurement system, which is fully compatible with Mark IV Audio's Acousta-CADD™ computer aided design program, was used. All directional information was measured at 6.1 meters (20 feet).

Figure 8 illustrates the nominal horizontal and vertical polar responses, with the long system axis vertical. If the high-frequency horn is rotated, then the horizontal and vertical polars should be interchanged.

Figure 4 illustrates the horizontal and vertical beamwidths. Beamwidth is the angle at which the horizontal and vertical polar responses have decreased in level by 6-dB when compared to the on-axis frequency response.

Figure 5 represents the total directivity of the PIM-222. The directivity factor, $R_s(Q)$, is the relative value, at a point, when compared to an ideal spherical response. The directivity index (D_i) is calculated by $D_i = 10 \log_{10} R_s$.

SERVICE

In the unlikely event the PIM-222 requires service, each driver can be replaced or serviced

from the front. A service data sheet is available from Electro-Voice.

POWER-HANDLING TEST

Electro-Voice components and systems are manufactured to exacting standards, ensuring they will hold up, not only through the most rigorous of power tests, but also through continued use in arduous, real-life conditions. Two main test specifications are used: the AES Recommended Practice for Specification of Loudspeaker Components Used in Professional Audio and Sound Reinforcement (AES2-1984/ANSI S4.26-1984) and the EIA Loudspeaker Power Rating Full Range (EIA RS-426-A 1980). Both of these specifications use random-noise spectrum which mimics typical music and tests the thermal and mechanical capabilities of the components. Electro-Voice will support relevant additional standards as and when they become available. Extreme, in-house power tests, which push the performance boundaries of the components, are also performed and passed to ensure years of trouble-free service.

Specifically, the PIM-222 high-frequency section passes AES2-1984/ANSI S4.26-1984 with the following values:

$Z_{min} = 5.6$ ohms at 6,000 Hz
 $P_{E(max)} = 75$ watts
Test voltage = 20.5 volts rms
41.0 volts peak (+6 dB)
Selected decade = 1,500-15,000 Hz

The PIM-222 low-frequency passes EIA RS-426-A 1980 with the following values:

$R_{SR} = 3.45$ ohms (1.15 x R_E)
 $P_{E(max)} = 600$ watts
Test voltage = 45.5 volts rms
91.0 volts peak (+6 dB)

ARCHITECTS' AND ENGINEERS' SPECIFICATIONS

The loudspeaker shall be a two-way dual woofer system for bi-amplification. Low frequencies shall be reproduced by two 8-ohm 305-mm (12-in.) woofers with an edge-wound flat-wire 63.5-mm (2.5-in.) voice coils capable of handling a total of 600 watts long term per EIA RS-426-A and with a sensitivity of 98 dB 1 watt/1 meter. High frequencies shall be reproduced by an 8-ohm compression driver with a 76.2-mm (3-in.) diaphragm and a 51-mm (2-in.) exit, capable of handling 75 watts long term per AES2-1984/ANSI S4.26-1984, coupled to a constant-directivity horn with a 60° x 40° coverage pattern and with a sensitivity of 112 dB. The high-frequency horn shall be rotatable 90° about its axis within the enclosure. The system shall reproduce frequencies from 50 to 18,000 Hz and have a nominal coverage pattern of 60° x 40°, with directivity control maintained down to 600 Hz. The recommended crossover frequency shall be 1,200 Hz. Maximum average sound pressure levels at 1 meter shall be 126 dB (low-frequency section) and 131 dB (high-frequency section), with short-term peaks 6 dB higher.

The enclosure shall be constructed of 7-ply void-free birch and finished in black textured paint. The enclosure shall have a trapezoidal footprint. Dimensions shall be 1.14 m (44.9 in.) high, 485 mm (19.1 in.) wide at the front, 267 mm (10.5 in.) wide at the rear and 438 mm (17.2 in.) deep. Enclosure sides shall have a 15° draft angle. The enclosure shall have a suspension system approved by an independent structural engineer and consisting of three independent suspension points on the top and three independent suspension on the bottom, all of which shall mate with Ancre 42546-10

fittings. Net weight shall be 49.4 kg (109 lb).

The loudspeaker system shall be the Electro-Voice PIM-222.

Note: The PIM-222 described above is the standard configuration. Acoustic and mechanical details will vary when different options are supplied.

UNIFORM LIMITED WARRANTY

Electro-Voice products are guaranteed against malfunction due to defects in materials or workmanship for a specified period, as noted in the individual product-line statement(s) below, or in the individual product data sheet or owner's manual, beginning with the date of original purchase. If such malfunction occurs during the specified period, the product will be repaired or replaced (at our option) without charge. The product will be returned to the customer prepaid. **Exclusions and Limitations:** The Limited Warranty does not apply to: (a) exterior finish or appearance; (b) certain specific items described in the individual product-line statement(s) below, or in the individual product data sheet or owner's manual; (c) malfunction resulting from use or operation of the product other than as specified in the product data sheet or owner's manual; (d) malfunction resulting from misuse or abuse of the product; or (e) malfunction occurring at any time after repairs have been made to the product by anyone other than Electro-Voice or any of its authorized service representatives. **Obtaining Warranty Service:** To obtain warranty service, a customer must deliver the product, prepaid, to Electro-Voice or any of its authorized service representatives together with proof of purchase of the product in the form of a bill of sale or receipted invoice. A list of authorized service representatives is available from Electro-Voice at 600 Cecil Street, Buchanan, MI 49107 (616/695-6831 or 800/234-6831). **Incidental and Consequential Damages Excluded:** Product repair or replacement and return to the customer are the only remedies provided to the customer. Electro-Voice shall not be liable for any incidental or consequential damages including, without limitation, injury to persons or property or loss of use. Some states do not allow the exclusion or limitation of incidental or consequential damages so the above limitation or exclusion may not apply to you. **Other Rights:** This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Electro-Voice Speakers and Speaker Systems are guaranteed against malfunction due to defects in materials or workmanship for a period of five (5) years from the date of original purchase. The Limited Warranty does not apply to burned voice coils or malfunctions such as cone and/or coil damage resulting from improperly designed enclosures. Electro-Voice active electronics associated with the speaker systems are guaranteed for three (3) years from the date of original purchase. Additional details are included in the Uniform Limited Warranty statement.

Electro-Voice Flying Hardware (including enclosure-mounted hardware and rigging accessories) is guaranteed against malfunction due to defects in materials or workmanship for a period of one (1) year from the date of original purchase. Additional details are included in the Uniform Limited Warranty statement.

Electro-Voice Accessories are guaranteed against malfunction due to defects in materials or workmanship for a period of one (1) year from the date of original purchase. Additional details are included in the Uniform Limited Warranty statement.

Service and repair address for this product: Electro-Voice, Inc., 600 Cecil Street, Buchanan, Michigan 49107 (616/695-6831 or 800/234-6831).
