Connecting a Dolby Digital™ decoder, DTS decoder or MPEG decoder

- Connecting multi-channel Dolby Digital decoder allows you to enjoy the 5.1ch Dolby Digital surround system as well as DTS decoder, 5.1 channel surround system.
- After connecting to a Dolby Digital decoder, set "DOLBY DIGITAL" to "Stream" in the AUDIO menu. (See page 60.)
- After connecting to a DTS decoder, set "DTS" to "ON" in the AUDIO menu. (See page 60.)
- After connecting to a MPEG decoder, set "MPEG" to "Stream" in the AUDIO menu. (See page 60.)

Connecting to an MD deck or DAT deck

- The audio source recorded in Dolby Digital 5.1 channel surround format cannot be recorded using an MD or DAT deck as a digital sound.
- If not connected to a Dolby Digital decoder, set "DOLBY DIGITAL" to "PCM" in the AUDIO menu. Playing back a DVD using incorrect settings may generate noise distortion, and damage speakers.
- Set "DOLBY DIGITAL," and "MPEG" to "PCM" and set "DTS" to "OFF" in the AUDIO menu for connecting to an MD or DAT deck.
- You can use AUDIO OUT jacks for the connection of your audio system.

After you have completed connections

Switch the input selector on your TV to an appropriate external input channel. For details, refer to the Owner's Manual of your TV.

Note

- Connect this unit directly to the TV. If the AV cables are connected to a VCR, pictures may be distorted due to the effects of the copy protection system.

Information on DVD recording

Type of discs

This unit can record on DVD-R and DVD-RW. You can record on DVD-R only once. On DVD-RW, you can record and erase many times.
It is possible to record on DVD-R only in Video mode. DVD-RW can record in the format you select from Video mode or VR mode.

Logo	Attributes
DVD R W **DVD** R R 4.7	8 cm / 12 cm, single-sided, single layer disc Max. recording time (10H mode, approx.): 600 minutes (4.7 GB) (for 12 cm) 180 minutes (1.4 GB) (for 8 cm)

If you want to record repeatedly on the same disc, or if you want to edit the disc after recording, use a rewritable DVD-RW type disc.
If you want to save recordings without any alteration, use a non-rewritable DVD-R type disc.

- Discs that should or should not be used with this recorder:
  DVD-R 8x can be used.
  DVD-RW 4x can be used, but 6x or 8x will result in a recording error.
- Discs that were tested and proven as compatible with this recorder:
  Maxell DVD-R, TDK DVD-RW 2x, MITSUBISHI DVD-R 8x, JVC DVD-RW 4x

Video mode and VR (Video Recording) mode
Video mode is the same recording format as used on the pre-recorded DVD-Videos you purchase in local shops, so you can play back the discs recorded in this format in most DVD players. You will need to finalise such discs (see page 34) before playing them back in other DVD players. Unless finalised, you can play back, record additional materials or edit discs recorded in Video mode with this unit.
VR (Video Recording) mode is a basic recording format for DVD-RW discs. You can record and edit material repeatedly. It is impossible to record additional materials on a disc formatted in VR mode and already recorded in another video system other than PAL, such as NTSC.

> **Note**
> - The following disc cannot be used for recording in this unit:
>   DVD-RW 6x

DVD players bearing the **RW COMPATIBLE** logo are capable of playing back DVD-RW discs recorded in VR mode.

Disc type	Disc format	Functions
DVD R W	Video mode **Video DVD-RW**	Playing back, Limited recording, Limited editing
	VR mode **VR DVD-RW**	Playing back, Recording, Original / Playlist editing
DVD R 4.7	Video mode **DVD-R**	Playing back, Limited recording, Limited editing

Recording speed

You can select a recording speed from 6 options. The recording time will vary depending on the recording speed you select as follows.

Recording speed		Recording time		Video / Sound Quality
TV screen	Front Panel Display	12 cm	8 cm	
1H	XP	60 min	18 min	Excellent
2H	SP	120 min	36 min	Very good
4H	LP	240 min	72 min	Good
6H	EP	360 min	108 min	Average
8H	SLP	480 min	144 min	Low
10H	SEP	600 min	180 min	Low

- This table is intended for a standard new single-sided 12 cm disc. The recording times are estimates and actual recording time may differ.
- The audio and video quality becomes poorer as the recording time gets longer.
- Discs recorded in 8H or 10H on this recorder may not be played back on other DVD recorders or DVD players.

Restrictions on recording

You cannot record copy-protected video using this unit. Copy-protected video includes DVD-Videos and some satellite broadcasts.
If copy-protected material is detected, recording will pause or stop automatically and an error message appears on the screen.
You can only record "Copy-once only" video using a DVD-RW disc in VR mode with Content Protection for Recordable Media (CPRM).
When recording a TV broadcast or an external input, you can display copy control information on the screen.

CPRM is a scrambling copy protection system for the protection of "copy-once" broadcast programmes. This unit is CPRM compatible, which means that you can record copy-once broadcast programmes, but you cannot then make a copy of those recordings. CPRM recordings can only be played back on DVD players that are specifically compatible with CPRM.

Recording

Information on copy control

Some satellite broadcasts include copy-protected information. If you wish to record them, refer to the following.

☆ Recordable
— Not Recordable

Note

- This unit cannot record on CD-RW or CD-R discs.
- DVD-RW / R and CD-RW / R discs recorded on a personal computer or a DVD or CD recorder may not be played back if the disc is damaged or dirty or if there is condensation on the player's lens.
- If you record a disc using a personal computer, even if it is recorded in a compatible format, it may not be played back because of the settings of the application software used to create the disc. (Check with the software publisher for more detailed information.)
- Discs recorded in Video mode on this unit cannot record additional information using other DVD recorders.
- It is not possible to use a DVD-RW disc formatted with this unit in another DVD recorder unless the content of the disc was also recorded with this unit.
- Since recording is performed using the Variable Bit Rate (VBR) method, the actual remaining time for recording may be a little shorter than the remaining time displayed on the OSD, depending on the picture you are recording.

Making discs playable in other DVD players (Finalise)

After recording, you must finalise the disc to play it back in other players. (See page 34.)
You cannot finalise discs in other DVD recorders.

After finalising:
- After a DVD-RW / R disc (Video mode) is finalised, a title menu is created automatically and additional recording or editing is not possible.
- Even if after a DVD-RW disc (VR mode) is finalised, additional recording or editing is possible.
- To play back in other DVD players, finalise discs recorded on this unit.

The error programme will be deleted once you check the error in the programme list, or once you cancel the timer-standby mode and re-enter it.

Press [CLEAR] to erase the selected programme.

PDC (Programme Delivery Control)

The Programme Delivery Control (PDC) assures that the TV programmes you have programmed for timer recording are recorded exactly from beginning to end, even if the actual broadcasting time differs from the scheduled time due to a delayed start or extension of the programme duration. Furthermore, if a programme is interrupted, the recording will also be interrupted automatically and resumed when the programme starts again.

If the PDC signal drops out because the broadcast signal is weak, or if a broadcasting station does not transmit a regular PDC signal, the timer recording is performed in normal mode (without PDC) even if it was programmed for PDC. If the starting time of the PDC timer recording is between 0:00 and 3:59 on a given day, the PDC function will operate from 20:00 on the previous day to 4:00 on the given day. If the starting time of the PDC timer recording is between 4:00 and 23:59 on a given day, the PDC function will operate from 0:00 on the day to 4:00 on the given day. This means that if the relevant programme is broadcasted within this period, it is recorded correctly. If the timer is not programmed correctly, the incorrect timer setting stays in effect unless you cancel it. To cancel an incorrect timer setting, refer to "Checking, cancelling, or correcting the timer programming information" on page 29.

Hints for timer recording

• If there is a power failure or the unit is unplugged for more than 30 seconds, the clock setting and all timer settings will be lost.
• If there is no disc or an unrecordable disc in the tray, the DVD indicator will flash and timer recording will not occur. Insert a recordable disc.
• If there is no tape or a tape with a record tab is not in the cassette compartment, the VCR indicator on the front panel flashes and timer recording cannot be performed. Please insert a recordable tape.
• When all timer recordings are complete, the 🕐 icon flashes. To play back or eject the recorded disc, press **[T-SET]**, and then press **[PLAY ▶]** or **[OPEN / CLOSE / EJECT ▲]**.

- The timer recording cannot be performed in DVD and VCR at the same time. If you set two programmings with the same channel and time both in DVD and VCR, the programming that has priority will be recorded.
- You cannot make any DVD operation during DVD timer recording.
- You cannot make any VCR operation during VCR timer recording.
- If the Start and End times are same, the length of the recording will be set for 24 hours. If the disc becomes full during recording, the unit will turn itself off. To continue recording, press **[T-SET]** to cancel the timer stand-by mode, insert a recordable disc and press **[T-SET]** again.

Priority of overlapped settings
The unit records programmes according to priority if timer programmes overlap.

If the starting time is same:
- The timer programming set first (PROG. 1) has priority.

PROG. 2 recording will start after PROG. 1 recording is completed.

Additional 30 seconds (at the most) are cut off

If programming has been made at the end of the programming (PROG. 1) currently being recorded:
- The timer programming set first (PROG. 2) has priority. PROG. 3 will not be recorded.

PROG. 2 recording will start after PROG. 1 recording is completed.
Additional 30 seconds (at the most) are cut off

If the recording time is partially overlapped:
- The timer programming with the earlier start time (PROG. 2) has priority. PROG. 1 will start after PROG. 2 recording is complete.

Additional 30 seconds (at the most) are cut off
If the recording time entirely overlaps:
- The shorter timer programming (PROG. 1) is not recorded.

Note for DVD recording
- If the recording time of two programmes overlap, or the End time of a programme and the Start time of another is same, the first 30 seconds (at the most) of the subsequent programme are cut off.

If the End time of the programme currently being recorded and the Start time of the subsequent programme are same:
- If PROG. 1 is a DVD recorded programme, the beginning of PROG. 2 may be cut off.

The first 30 seconds (at the most) are cut off.*

Glossary

Analogue audio

An electrical signal that directly represents sound. In contrast, digital audio can also be an electrical signal, but is an indirect representation of sound. See also Digital audio.

Aspect ratio

The width of a TV screen relative to its height. Conventional TVs are 4:3 (i.e., the screen is almost square). widescreen models are 16:9 (the screen is almost twice as wide as its height).

Chapter

Just as a book is split up into several chapters, a title on a DVD disc is usually divided into chapters. See also Title.

CM SKIP

This unit can skip TV commercials during DVD Video playback. Once **[CM SKIP]** is pressed, the start point will be set forward 30 seconds and playback resume automatically. (You can press **[CM SKIP]** up to 6 times.)

CPRM
(Content Protection for Recordable Media)

CPRM is a scrambling copy protection system for the protection of "copy-once" broadcast programmes (e.g. some satellite broadcasts).

Digital audio

An indirect representation of sound using numbers. During recording, the sound is measured at discrete intervals (44 or 100 times a second for CD audio) by an analogue-to-digital converter, generating a stream of numbers. On playback, a digital-to-analogue converter generates an analogue signal based on these numbers. See also Sampling frequency and Analogue audio.

Dolby Digital

A system developed by Dolby Laboratories that compresses digital sound. It works with stereo (2ch) or multi-channel audio.

DTS
(Digital Theater System)

DTS is a Multi-channel surround sound system, but it is different from Dolby Digital. Both formats were developed by Digital Theater System, Inc.

Finalise

To make DVDs that have been recorded playable in DVD players. It is possible to finalise DVD-R / DVD-RW discs with this unit.

JPEG
(Joint Photographic Experts Group)

JPEG is a method of compressing still image files. You can copy JPEG files on CD-RW / R discs from a computer and play back the files on this unit.

MP3
(MPEG Audio Layer 3)

MP3 is a method of compressing files. You can copy MP3 files on CD-RW / R discs from a computer and play back the files on this unit.

PBC (Video CD only)
(Playback Control)

This function enables you to play back interactive software using a menu screen. See also Title.

PCM
(Pulse Code Modulation)

PCM is a format that converts audio into digital data. It is mainly used for Audio CDs and DAT. This unit can play back sounds as realistic as possible by converting even compressed Dolby Digital and MPEG audio to PCM.

Playlist

From this list you can play back contents of a disc in your desired order or in sequence. It is also possible to directly search for a specific scene.

Region code

Regions associate discs and players with particular areas of the world. This unit will only play back discs that have compatible region codes. You can find the region code of your unit by looking on the rear panel. Some discs are compatible with more than one region (or all regions).

Sampling frequency

The rate at which sound is measured by a specified interval to turn it into digital audio data. The number of samples in one second is defined as the sampling frequency. The higher the rate is, the better the possible sound quality.

S-Video output

Video is output as the individual signals of colour(C) and luminance(Y), so a higher-quality picture will be displayed.

Title

(DVD)

A collection of chapters on a DVD. See also chapter.

(Video CD)

The contents of a Video CD. When playing back a Video CD with the PBC function, the title menu will appear automatically.

Track

Audio CDs and Video CDs use tracks to divide the contents of a disc. The DVD equivalent is called a chapter. See also Chapter.
