! Keep this instruction booklet on hand in order to refer to it when necessary. Take it with you when you move, and should you sell this appliance or pass it on to another party, make sure that this booklet is supplied along with the dryer so that the new owner may be informed about warnings and suggestions on how the appliance works.

! Read these instructions carefully; the following pages contain important information on installation and suggestions on how the appliance works.

This symbol reminds you to read this booklet.

Maintenance and Care

Troubleshooting

Service

Important Information

GB

For your Condenser dryer to operate efficiently, you must follow the regular maintenance schedule shown below:

Fluff Filter...

! You MUST clean the fluff filter after EVERY drying cycle.

STEP 1.

Open the door of your dryer.

STEP 2.

Remove the filter.

STEP 3.

Open the filter and clean any fluff deposits from the filter mesh.

STEP 4.

Refit the filter - NEVER run the dryer without the filter in position.

! Failure to clean the filter after EVERY drying cycle will affect the drying performance of your machine.

- It will take longer to dry and as a result will use more electricity during drying.

Water Container...

! You MUST empty the water container after EVERY drying cycle.

STEP 1.

Pull the water container towards you and remove it fully from the dryer.

STEP 2.

Remove either the small or large cap and empty the water from the container.

STEP 3.

Refit the water container, ensuring that it is pushed fully back into position.

! The 'Empty Water' light reminds you to empty the water

container at the start and at the end of each programme.

! Failure to empty the water container will result in:

- The machine will stop heating (so the load may still be wet at the end of the drying cycle).
- The 'Empty Water' light will tell you that the water container is full.

Priming the Water Collection System

When your dryer is new, the water container will not collect water until the system is primed... this will take 1 or 2 drying cycles. Once primed it will collect water during every drying cycle.

Important Information

Condenser Unit...

! You MUST clean the fluff from the condenser EVERY month.

STEP 1.
Open the condenser cover
- hold the handle and
pull towards you.

STEP 2.
Remove the condenser by
rotating the 3 clips then
pulling the condenser
towards you.
(There may be some water
in the tubes, this is normal).

STEP 3.
Flush the condenser, from
the rear with water, to
remove any fluff deposits.

STEP 4.
Refit the condenser unit
- ensure that the unit is
pushed in fully, all 3 clips
are re-secured and the
positioning arrows on the
front of the condenser are
pointing upwards.

Rotate 3 clips

- **Check that:**
 - The positioning arrows are pointing upwards.
 - The 3 clips are re-secured back into their 'lock' position.

! Failure to clean the condenser could cause premature failure of your dryer.

Installation

GB

Where to put your dryer

- Place your dryer at a distance from gas ranges, stoves, heaters, or cook tops because flames can damage the appliance.

- If you are going to install the appliance under a work counter, be sure to leave a 10mm space between the top and any other objects on or above the machine and a 15mm space between the sides and lateral furnishings or walls.

This is to ensure proper air circulation.

Ventilation

When the dryer is in use, there has to be adequate ventilation. Make sure you put your dryer in an environment that is not damp and has proper air circulation throughout. Airflow around the dryer is essential to condense the water produced during the washing, the dryer will not operate efficiently in an enclosed space or cupboard.

- ! If using the dryer in a small or cold room some condensation could be experienced.
- ! We do not recommend that the dryer is installed in a cupboard but the dryer must never be installed behind a lockable door, a sliding door or a door with a hinge on the opposite side to that of the dryer door.

Water drain

If your dryer is installed next to a drain the water can be plumbed into this drain. This does away with the need to empty the water container. If the dryer is stacked onto or installed next to a washing machine it can share the same drain. The height of the drain must be less than 3' (1m) from the bottom of the dryer.

Remove hose from position shown (see diagram).

Fit a suitable length of hose to the new location shown (see diagram).

- ! Make sure that the hose is not squashed or kinked when the dryer is in its final location.

Electrical connections

Make sure of the following before you insert the plug into the the electrical socket:

- Ensure your hands are dry.
- The socket must be grounded.
- The socket must be able to sustain the machines maximum power, which is indicated on the rating label (see *Dryer Description*).
- Power voltage must be within the values indicated on the rating label (see *Dryer Description*).
- The socket must be compatible with the dryers plug. Should this not be the case, replace the plug or the socket.

! Do not use extension cords.

! The dryer must not be installed outdoors, even if the space is sheltered. It can be very dangerous if it is exposed to rain or storms.

! Once installed, the dryers electrical wire and plug must be within easy reach.

! The power cord must not be bent or squashed.

! The power cord supplied is fitted with a BS1363 plug and a 13 amp BS1362 fuse. If you need to replace the fuse, use only those rated at 13 amp (13A) and ASTA approved to BS1362.

Moulded plug

! The plug must not be used without the fuse cover in place. If a replacement fuse holder/cover is required, it must be of the same colour coding or wording as shown on the base of the plug. Replacements are available from authorised dealers.

Changing the plug

The wires in the power cord are coloured in accordance with the following:

Green and Yellow (Earth) wire to terminal marked 'E', symbol \perp , or coloured green and yellow.

Blue (Neutral) wire to terminal marked 'N' or coloured black.

Cord clamp

13A ASTA approved fuse to BS1362.

Brown (Live) wire to terminal marked 'L' or coloured red.

! If the plug being replaced is a non-rewirable type, then the cut-off plug must be disposed of safely. DO NOT leave it where it can be inserted into a socket and create a shock hazard.

! The power supply cord should be checked periodically and replaced by a cord specially prepared for this dryer and fitted only by authorised technicians (see *Service*). New or longer power cords are supplied at an extra charge by authorised dealers.

! The manufacturer denies any responsibility should any of these rules not be followed.

! If in doubt about any of the above consult a qualified electrician.

Before you start using your dryer

Once you have installed your dryer and before you use it, clean the inside of the drum to remove any dust that could have accumulated during transport.

Dryer Description

The features

Control panel

The **ON/OFF** button  : If the dryer is running and this button is pressed, the dryer stops. Press again, the dryer restarts.

The **PROGRAMMES** knob sets the programme: rotate it until the indicator is pointing to the programme you want to select (*see Start and Programmes*).

The **OPTION** buttons/lights select available options for your selected programme. The lights indicate that the option has been selected (*see Start and Programmes*).

The **START/PAUSE** button/light  starts a selected programme. When you press this button there will be one beep and the progress lights will flash to confirm the action. When a programme is running, holding this button in pauses the programme and stops the dryer. The light is green when programme is running, flashing amber if the programme has been paused or flashing green if on standby waiting to start a programme (*see Start and Programmes*).

Note: This light also flashes amber during the Heat & Enjoy programme and during the Post Care phase of a programme.

The **Progress or Delay** lights show you the status of the programme, or the delay time when they flash. During a delayed start the lights flash to show the delay selected. When (not flashing) they show each stage of the programme by the corresponding light turning on (*see Start and Programmes*).

The **Empty Water** indicator light signals that the water container should be emptied. The light will take a few seconds to go out after replacing the empty water container, the dryer must be running for this to happen (*see The Controls*).

Note: If the water bottle fills the indicator light flashes, the heat is turned off and your clothes will not dry.

The **Clean Filter** light gives you a reminder before every programme that it is essential to clean the filter every time the dryer is used (*see Maintenance and Care*).

The **Clean Condenser** light gives you a reminder that it is essential to clean the condenser at regular intervals (*see Maintenance and Care*).

Choosing a programme

1. Plug the dryer into the electrical socket.
2. Sort your laundry according to fabric type (*see Laundry*).
3. Open the door and make sure the filter is clean and in place and the water container is empty and in place (*see Maintenance*).
4. Load the machine and make sure items are not in the way of the door seal. Close the door.
5. If none of the lights are on: Press the ON/OFF button .
6. Choose a programme by checking the Programmes Guide (*see Programmes*) as well as the indications for each type of fabric (*see Laundry*).
 - Select a programme by rotating the PROGRAMMES knob.
7. Set a delay time and other options if necessary.
8. The START/PAUSE light is flashing green:
 - press the START/PAUSE  button to begin. The green light stops flashing.
 - During the drying programme, you can check on your laundry and take out items that are dry while others continue drying. When you close the door again, press the START/PAUSE button in order to resume drying.
 - (When the door is opened the START/PAUSE light will flash Amber, after the door is closed and the START/PAUSE button pressed, the START/PAUSE light will stop flashing and show green.)*
 - Note:** *During all of the Heat & Enjoy programme and the Post Care phase this light flashes Amber.*
9. When the programme is complete. The buzzer will sound. Open the door, take the laundry out, clean the filter and replace it. Empty the water container and replace it (*see Maintenance*). If the Crease Care option has been selected and you do not remove the laundry immediately, the dryer will tumble occasionally for 10 hours or until you open the door.
10. Unplug the dryer.

Note:

This tumble dryer, in compliance with new energy saving regulations, is fitted with an automatic standby system which is enabled after about 30 minutes if no activity is detected. Press the ON/OFF button briefly and wait for the machine to start up again.

Shirts

High heat option

- This is a programme for shirts made from cotton.
- It can be used for load sizes up to 3kg (approximately 10 shirts).
- This programme will take about 80 minutes, but may take longer depending on the size of the load and the spin speed used in your washer.

Low heat option

- This is a programme for shirts made from synthetic materials or a mixture of natural and synthetic materials, such as polyester and cotton.
- It can be used for load sizes up to 3kg (approximately 14 shirts).
- This programme will take about 65 minutes, but may take longer depending on the size of the load and the spin speed used in your washer.

Loads dried using this programme are usually ready to wear, the edges or seams may be slightly damp. If this is the case, try turning the shirts inside out and running the programme again for a short period.

Anti Allergy Programme

This programme is a treatment used to minimise or eliminate the House Dust Mite or Pollen in the load.

In the drying process mites are killed by the high temperature and the low humidity environment.

Can be used on a wet load to dry and treat, or on a dry load just to treat your laundry.

Maximum load is 8kg for a wet load and 4kg for a dry load.

Jeans

- This is a programme for jeans made from denim cotton. Before drying your jeans turn the front pockets inside out.
- It can be used for load sizes up to 3kg (approximately 4 pairs).
- Do not mix dark and light coloured items.
- It can also be used on other garments made from the same material, such as jackets.
- This programme will take about 85 minutes, but may take longer depending on the size of the load and the spin speed used in your washer.
- Loads dried using this programme are usually ready to wear, the edges or seams may be slightly damp. If this is the case, try turning the jeans inside out and running the programme again for a short period.

! We do not recommend that you use this programme if your jeans have elastic waist bands, studs or embroidery.

Start and Programmes

Special Programmes

Wool Programme

- This is a programme for tumble dryer safe garments marked with the symbol .
- It can be used for load sizes up to 1kg (approximately 3 sweaters).
- We recommend that garments are turned inside out before drying.
- This programme will take about 60 minutes, but may take longer depending on the size and density of the load and the spin speed used in your washer.
- Loads dried using this programme are usually ready to wear, but on some heavier garments the edges may be slightly damp. Allow these to dry naturally as over-drying could damage garments.

! Unlike other materials, the mechanism of wool shrinkage is irreversible; i.e. it will not stretch back to original size and shape.
! This programme is not suitable for Acrylic garments.

Silk

- This is a programme for drying your delicate silk.
- It can be used for load sizes up to 0.5kg.
- This programme will take about 110 minutes, but may take longer depending on the size and density of the load and the spin speed used in your washer.
- Loads dried using this programme are usually ready to use, but on some heavier garments the edges may be slightly damp. If this is the case, remove the load and open them out and then run the programme again for a short period.

Baby Delicate Programme

- This is a programme for drying your baby's small delicate items of clothing and bedding (Cotton and Chenille) and for drying your delicate clothes ie. Acrylics.
- DO NOT dry items such as bibs and nappy pants with plastic coverings.
- It can be used for load sizes up to 2kg.
- This programme will take about 120 minutes, but may take longer depending on the size and density of the load and the spin speed used in your washer.
- Loads dried using this programme are usually ready to wear, but on some heavier garments the edges may be slightly damp. If this is the case, try turning items inside out and running the programme again for a short period.

Cuddly Toy Programme

With this programme you can remove dust easier and wash the cuddly toys more often because the drying time is very much reduced compared to drying in the open air. It is a delicate drying cycle that dries at low temperature and with soft mechanical action to maintain at best the original look and shine of the fur.

Note: For allergy protection, just freeze cuddly toys for 24 hours then wash and dry them. Repeat every 6 weeks. Before drying remove accessories such as clothes, collars or sound boxes and protect plastic eyes with masking tape after drying them with a cloth.

This programme will take about 200 minutes: Load 2-3 Cuddly Toys.

Heat & Enjoy

This programme helps to heat towels & bathrobes for a warm sensation after a bath or shower. It is also useful for warming clothes before dressing during winter. The cycle heats clothes to 37°C (Body Temperature) and runs at this temperature until you stop the cycle. Maximum load 3kg.

Note: During this programme the Start/Pause light flashes Amber.

Easy Iron Programme

'Easy Iron' is a short 10 minute programme (8 minutes of heat followed by a 2 minute cool tumble period) which fluffs the fibres of clothing that have been left in the same position/location for an extended period of time. The cycle relaxes the fibres and makes them easier to iron and fold.

! 'Easy Iron' is **not a drying programme** and should not be used for wet articles of clothing.

For best results:

1. Do not load more than the maximum capacity. These numbers refer to the dry weight:

| Fabric | Maximum load |
|----------------------------|--------------|
| Cotton and Cotton mixtures | 2.5kg |
| Synthetics | 2kg |
| Denim | 2kg |

2. Unload the dryer immediately after the end of the programme, hang, fold or iron the articles and put them away in the closet. Should this not be possible repeat the programme.

The 'Easy Iron' effect varies from one fabric to the next. It works well on traditional fabrics like Cotton or Cotton mix, and less well on acrylic fibres and on materials such as Tencel®.

Refresh

! 'Refresh' is **not a drying programme** and should not be used for wet articles of clothing.

- It can be used on any load sizes up to 8kg, but is more effective on smaller loads.
- This is a 20 minute programme that airs your clothes with cool air. Also use to cool warm clothes.

Start and Programmes

GB

Programme option modifier

Quick Dry

This programme is for small loads maximum 1kg.

Your drying time is very much reduced with a huge time saving up to 53% on cottons (with High Heat option) and 50% on synthetics (with Low Heat option).

This programme will take about 30-45 minutes: Load 1kg.

Programmes

! If none of the lights are lit; Press the ON/OFF button  and then select programme.

| Programme | What it does... | How to set it... | Notes/Options available: |
|--|---|--|--|

Start and Programmes

GB

The Controls

• PROGRAMMES knob

! Warning, if after pressing the start button, the programmes knob position is changed, the new position will **NOT** change the programme selected.

To change a selected programme, press the Start/Pause button  , the light flashes Amber to indicate the programme is paused. Select the new programme and any options required, the light will then flash green. Press the Start/Pause button  again and the new programme will start.

• OPTION buttons / lights

These buttons are used to customise the selected programme to your requirements. Not all options are available for all programmes (*see Start and Programmes*). If an option is not available and you press the button, the buzzer will beep three times. If the option is available there will be one beep and the option light next to the button lights to confirm the selection.

Progress (Drying, Cool Tumble, End) / Delay (3hr 6hr 9hr) Lights

When the light next to the delay button is on, these lights flash to indicate the delay time selected. During other programmes they indicate the progress of the dryer, each one comes on as the corresponding phase starts.

Time Delay

The start of some programmes (*see Start and Programmes*) can be delayed for up to 9 hours in 3hr steps.

When a delayed start is in progress the light next to the delay button will be on and the selected delay period light will flash (after the start button has been pressed). To set a delayed start, press the Delay Timer button, and the light next to the button will come on together with the 3hr delay light. Pressing the button again will advance the delay setting to 6hr, the 3hr light goes out and the 6hr light is on. Each time you press the button the delay setting advances 3 hours, as indicated by the corresponding light. If the 9hr light is on, pressing the button again will cancel the delay. Holding in the On/Off button will also cancel.

Crease Care

The *pre-care option* is only available if a delayed start has been selected. It tumbles the clothes occasionally during the delayed period to help prevent creases developing. The *post-care option* occasionally tumbles the clothes after end of the drying and cool tumble cycles to prevent creases developing, should you not be available to remove the load immediately the programme is complete. The End light is on during this phase. **Note:** The Start/Pause light flashes Amber during this phase. Selecting this option enables both the pre and post care functions if appropriate.

High Heat

Press this button and a high heat setting is selected and the light next to the button comes on. If the light alongside the button is on then pressing the button selects a low heat setting and the light goes out. Not all programmes allow you to change this setting.

Empty Water Light / Container

(If you have plumbed your dryer to a drain this light can be ignored, as there is no need to empty the water container).

When this light is on (not flashing) it reminds you to empty the water container.

If the water container fills during a programme, the heater turns off and the dryer does a period of Cool Tumble then the light flashes and the buzzer sounds. You must empty the water container and restart the dryer or the clothes will not dry. After re-starting the dryer, the light will take a few seconds to go out.

To avoid this always empty the water container each time you use the dryer (*see Maintenance*).

• Door Opening

Opening the door (or pressing the Start/Pause button) during a programme will stop the dryer and have the following effects:

Note: The Start/Pause light flashes Amber during the Heat & Enjoy programme and during the Post Care phase of a programme.

- The Start/Pause light flashes Amber.
- During a delay phase the delay will continue to count down. The Start/Pause button **must** be pressed to resume the delay programme. One of the delay lights will flash to show the current delay setting.
- The Start/Pause button **must** be pressed to resume the programme. The progress lights will change to show the current status and the Start/Pause light will stop flashing and turn green.
- During the Post Creasecare phase of a drying programme, the programme will finish. Pressing the Start/Pause button will re-start a new programme at the beginning.
- Changing the programmes knob will select a new programme and the Start/Pause light will flash green. You can use this to select the  Refresh programme to cool the clothes, if you find them dry enough. Press the Start/Pause button to begin a new programme.

• Note

If you have a power cut, switch off the power or remove the plug, press the Start/Pause button and the programme will resume.

Sorting your laundry

- Check symbols on clothing labels to make sure that the articles can be tumble dried.
- Sort laundry by fabric type.
- Empty pockets and check buttons.
- Close zippers and hooks and tie loose belts and strings.
- Wring out each item in order to eliminate as much excess water as possible.

! Do not load dripping wet clothes into the dryer.

Maximum load size

Do not load more than maximum capacity.

These numbers refer to dry weight:

Natural fibres: 8kg max (18lb)

Synthetic fibres: 3kg max (6.6lb)

! DO NOT overload the dryer as this could result in reduced drying performance.

Typical weights

Note: 1kg = 1000g (1lb = 16oz)

| Clothes | | | |
|------------|--------|-------|-----------|
| Blouse | Cotton | 150g | (5oz) |
| | Other | 100g | (3oz) |
| Dress | Cotton | 500g | (1lb 2oz) |
| | Other | 350g | (12oz) |
| Jeans | | 700g | (1lb 6oz) |
| 10 nappies | | 1000g | (2lb 3oz) |
| Shirt | Cotton | 300g | (10oz) |
| | Other | 200g | (7oz) |
| T-Shirt | | 125g | (4oz) |

| Household Items | | | |
|----------------------|--------|-------|-----------|
| Duvet cover (Double) | Cotton | 1500g | (3lb 5oz) |
| | Other | 1000g | (2lb 3oz) |
| Large Tablecloth | | 700g | (1lb 6oz) |
| Small Tablecloth | | 250g | (9oz) |
| Tea Towel | | 100g | (3oz) |
| Bath Towel | | 700g | (1lb 6oz) |
| Hand Towel | | 350g | (12oz) |
| Double Sheet | | 500g | (1lb 2oz) |
| Single Sheet | | 350g | (12oz) |

At the end of a drying cycle, cottons could still be damp if you grouped cottons and synthetics together. If this happens simply give them an additional short period of drying.

- **Note:** The last 10 minutes of any time set is the Cool Tumble, so allow for this when setting the time, as this period will not dry your laundry.

Wash Care Labels

Look at the labels on your garments, especially when tumble drying for the first time. The following symbols are the most common:

-  May be tumble dried
-  Do **not** tumble dry
-  Tumble dry at high heat setting
-  Tumble dry at low heat setting

Items not suitable for tumble drying

- Articles that containing rubber or rubber-like materials or plastic film (pillows, cushions, or PVC rainwear), any other flammable articles or objects that contain flammable substances (towels soiled with hair spray).
- Glass fibres (certain types of draperies)
- Items which have been dry cleaned
- Items with the ITCL Code  (*see Special clothing items*). These can be cleaned with special at-home dry cleaning products. Follow instructions carefully.
- Large bulky items (quilts, sleeping bags, pillows, cushions, large bedspreads etc). These expand when drying and would prevent airflow through the dryer.

Laundry

GB

Special clothing items

Blankets and Bedspreads: acrylic items (Acilan, Courtelle, Orion, Dralon) **must be dried** with special care on LOW heat setting. Avoid drying for a long period of time.

Pleated or creased garments: read the manufacturer's drying instructions on the garment.

Starched articles: do not dry these with non-starched items. Make sure that as much of the starch solution is removed from the load as possible before placing it in the dryer. Do not over-dry: the starch will become powdery and leave your clothing limp, which defeats the purpose of starch.

Drying times

The table (*see below*) presents APPROXIMATE drying times in Minutes. Weights refer to dry garments.

Times are approximate and can vary depending upon:

- Amount of water retained in clothes after spin cycle: towels and delicates retain a lot of water.

- Fabrics: items that are the same type of fabric but different textures and thicknesses may not have the same drying time.
- Quantity of laundry: single items or small loads may take longer to dry.
- Dryness: If you are going to iron some of your clothes, they can be taken out while still a bit damp. Others can be left longer if you need them to be completely dry.
- Heat setting.
- Room temperature: if the room where the dryer is located is cold, it will take longer for the dryer to dry your clothes.
- Bulk: some bulky items can be tumble dried with care. We suggest that you remove these items several times, shake them out, and return them to the dryer until finished.

! Do not over-dry your clothes. All fabrics contain a little natural moisture, which keeps them soft and fluffy.

Warnings and Suggestions

! The appliance has been designed and built according to international safety standards. These warnings are given for safety reasons and must be followed carefully.

General safety

- This tumble dryer is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.
- This tumble dryer has been designed for home, and not professional use.
- Do not touch the appliance while barefoot or with wet hands or feet.
- Unplug the machine by pulling on the plug, not the cord.
- Children must not be in proximity of the dryer when in use. After using the dryer, turn it off and unplug it. Keep the door closed to make sure that children do not use it as a toy.
- Children should be supervised to ensure that they do not play with the dryer.
- The appliance must be installed correctly and have proper ventilation. The air intake at the front of the dryer should never be obstructed (*see Installation*).
- Never use the dryer on carpeting where the pile height would prevent air from entering the dryer from the base.
- Check to see if the dryer is empty before loading it.
-  The back of the dryer could become very hot. Never touch it while in use.
- Do not use the dryer unless the filter, water container and condenser are securely in place (*see Maintenance*).
- Do not overload the dryer (*see Laundry* for maximum loads).
- Do not load items that are dripping wet.
- Carefully check all instructions on clothing labels (*see Laundry*).
- Do not tumble dry large, very bulky items.
- Do not tumble dry acrylic fibres at high temperatures.
- Complete each programme with its Cool Tumble Phase.
- Do not turn off the dryer when there are still warm items inside.
- Clean the filter after each use (*see Maintenance*).
- Empty the water container after each use (*see Maintenance*).
- Clean the condenser unit at regular intervals (*see Maintenance*).
- Do not allow lint to collect around the dryer.
- Never climb on top of the dryer. It could result in damage.
- Always follow electrical standards and requirements (*see Installation*).
- Always buy original spare parts and accessories (*see Service*).

To minimise the risk of fire in your tumble dryer, the following should be observed:

- Tumble dry items only if they have been washed with detergent and water, rinsed and been through the spin cycle. It is a fire hazard to dry items that HAVE NOT been washed with water.
- Do not dry garments that have been treated with chemical products.
- Do not tumble dry items that have been spotted or soaked with vegetable or cooking oils, this constitutes a fire hazard. Oil-affected items can ignite spontaneously, especially when exposed to heat sources such as a tumble dryer. The items become warm, causing an oxidation reaction with the oil, Oxidisation creates heat. If the heat cannot escape, items can become hot enough to catch fire. Piling, stacking or storing oil-affected items can prevent heat from escaping and so create a fire hazard. If it is unavoidable that fabrics containing vegetable or cooking oil or those that have been contaminated with hair care products be placed in a tumble dryer they should first be washed with extra detergent - this will reduce, but not eliminate the hazard. The cool tumble phase should be used to reduce the temperature of the items. They should not be removed from the dryer and piled or stacked while hot.
- Do not tumble dry items that have previously been cleaned in or washed in, soaked in or soiled with petrol/gasoline, dry cleaning solvents or other flammable or explosive substances. Highly flammable substances commonly used in domestic environments including cooking oil, acetone, denatured alcohol, kerosene, spot removers, turpentine, waxes and wax removers. Ensure these items have been washed in hot water with an extra amount of detergent before being dried in the tumble dryer.
- Do not tumble dry items containing foam rubber (also known as latex foam), or similarly textured rubber like materials. Foam rubber materials can, when heated, produce fire by spontaneous combustion.
- Fabric softener or similar products should not be used in a tumble dryer to eliminate the effects of static electricity unless the practice is specifically recommended by the manufacturer of the fabric softener product.
- Do not tumble dry undergarments that contain metal reinforcements eg. bras with metal reinforcing wires. Damage to the tumble dryer can result if the metal reinforcements come loose during drying.
- Do not tumble dry rubber, plastic articles such as shower caps or babies waterproof covers, polythene or paper.
- Do not tumble dry rubber backed articles, clothes fitted with foam rubber pads, pillows, galoshes and rubber coated tennis shoes.
- Remove all objects from pockets, especially lighters (risk of explosion).

! WARNING: Never stop the dryer before the end of the drying cycle unless all items are quickly removed and spread out so that the heat is dissipated.

Saving energy and respecting the environment

- Wring out items to eliminate excess water before tumble drying (if you use a washing machine first, select a high spin cycle). Doing this will save time and energy during drying.
- Always dry full loads - you save energy: single items or small loads take longer to dry.
- Clean the filter after each use to contain energy consumption costs (*see Maintenance*).

Switching off the electricity

! Unplug your dryer when not using it, when cleaning it and during all maintenance operations.

Clean the filter after each cycle

The filter is an important part of your dryer: it accumulates lint and fluff that is formed while drying. When finished drying, clean the filter by rinsing it under running water or with your vacuum cleaner. Should the filter become clogged up, the airflow inside the dryer will be seriously compromised: drying times lengthen and you will consume more energy. It may also damage your dryer.

The filter is found in front of the dryer trim (*see diagram*). Removing the filter:

1. Pull the plastic grip of the filter upwards (*see diagram*).
2. Open the filter and clean the lint from the inside.
3. Replace it correctly. Ensure the filter is fully located flush into the tumble dryer trim.
4. Remove any lint that has built up on the inside of the door and around the door seal.

! Do not use the dryer without replacing the filter.

Check the drum after each cycle

Turn the drum manually in order to remove small items (handkerchiefs) that could have been left behind.

Empty the water container after each cycle

Pull the container out of the dryer and remove either the small or large cap and empty it into a sink or other suitable drain. Refit the cap and replace the container securely.

! Always check and empty the container before you start a new drying programme.

Cleaning the drum

! Do not use abrasives, steel wool or stainless steel cleaning agents to clean the drum.

A coloured film may start to appear on the stainless steel drum, this may be caused by a combination of water and, or cleaning agents such as fabric conditioner from the wash. This coloured film will not affect the dryer performance.

Cleaning the condenser unit

Periodically (every month) remove the condenser unit and clean any build up of fluff from between the plates by rinsing it under the tap with cold water.

This should be done with cold water from the rear of the condenser.

Removing the condenser:

1. Unplug the dryer and open the door.
2. Pull open the condenser cover (*see diagram*). Release the three catches by turning 90° counter-clockwise then pull on the grip and remove from the dryer.
3. Clean the surface of the seals and replace, making sure that the catches have been secured.

Cleaning the dryer

- External parts in metal or plastic and rubber parts can be cleaned with a damp cloth.
- Periodically (every 6 months) vacuum the front air intake grille, to remove any build up of fluff, lint or dust. Also to remove accumulation of fluff from the front of the condenser and filter areas, clean occasionally with a vacuum cleaner.

! Do not use solvents or abrasives.

! Your dryer uses special bearing components which do not need lubrication.

! Have your dryer checked regularly by authorised technicians to ensure electrical and mechanical safety (*see Service*).

Troubleshooting

One day your dryer seems not to be working. Before you call your Service Centre (*see Service*), go through the following troubleshooting suggestions:

| Problem: | Possible causes / Solution: |
|--|---|
| The tumble dryer won't start. | <ul style="list-style-type: none"> • The plug is not plugged into the socket, or not making contact. • There has been a power failure. • The fuse has blown. Try to plug another appliance into the socket. • You are using an extension cord? Try to plug the dryer's power cord directly into the socket. • The door is not closed securely? • The PROGRAMMES knob has not been set properly (<i>see Start and Programmes</i>). • The START/PAUSE button has not been pressed (<i>see Start and Programmes</i>). |
| Drying cycle will not begin. | <ul style="list-style-type: none"> • You have set a delayed time (<i>see Start and Programmes</i>). |
| Its taking a long time to dry. | <ul style="list-style-type: none"> • The filter has not been cleaned (<i>see Maintenance</i>). • The water container needs emptying? The empty water light is flashing? (<i>see Maintenance</i>). • The condenser needs cleaning? (<i>see Maintenance</i>). • The temperature setting is not ideal for the type of fabric you are drying (<i>see Start and Programmes, and see Laundry</i>). • The correct drying time has not been selected for the load (<i>see Laundry</i>). • The air intake grille is obstructed (<i>see Installation, and see Maintenance</i>). • The items were too wet (<i>see Laundry</i>). • The dryer was overloaded (<i>see Laundry</i>). |
| Empty water light is flashing but the dryer has only been running for a short period. | <ul style="list-style-type: none"> • The water container was probably not emptied at the start of the programme. Do not wait for the empty water signal, always check and empty the container before starting a new drying programme (<i>see Maintenance</i>). |
| Empty water light is on and the water container is not full. | <ul style="list-style-type: none"> • This is normal, the light flashes when the container is full. If the light is on but not flashing it is just a reminder to empty the container (<i>see Start and Programmes</i>). |
| The OPTION lights and the START/PAUSE light Flash amber. | <ul style="list-style-type: none"> • If the Option lights and the START/PAUSE light flash together with the Clean Condenser and Cool Tumble lights; Or the START/PAUSE light flashes together with the Clean Filter, Clean Condenser, Cool Tumble and END lights on, then: <ul style="list-style-type: none"> - Turn off and remove the plug. Clean the filter and the condenser (<i>see Maintenance</i>). Then replace the plug, turn on and start another programme. If the same combination of lights still flash contact the Service Centre (<i>see Service</i>). • If the Option lights and the START/PAUSE light flash with any other combination of lights on: Note down the lights that are on and contact the Service Centre (<i>see Service</i>). |
| Programme finishes and clothes are damper than expected. | <p>! For safety the dryer has a maximum programme time of 4 hours. If an automatic programme has not sensed the required final moisture in this time the dryer will complete the programme and stop. Check the above points and run the programme again, if the results are still damp, contact the Service Centre (<i>see Service</i>).</p> |

Service

GB

Before calling the Service Centre:

- Use the troubleshooting guide to see if you can solve the problem yourself (*see Troubleshooting*).
- If not, turn off the dryer and call the Service Centre closest to you.

What to tell the Service Centre:

- name, address and post code.
 - telephone number.
 - the type of problem.
 - the date of purchase.
 - the appliance model (Mod.).
 - the serial number (S/N).
- This information can be found on the data label inside the door of the machine.

Spare Parts

This dryer is a complex machine. Repairing it yourself or having a non-authorized person try to repair it could cause harm to one or more persons, could damage the machine and could invalidate the spare parts warranty.

Call an authorised technician if you experience problems while using the machine.

Recycling and Disposal Information

As part of our continued commitment to helping the environment, we reserve the right to use quality recycled components to keep down customer costs and minimise material wastage.

- Disposing of the packaging material: follow local regulations, so the packaging can be recycled.
- To minimise risk of injury to children, remove the door and plug - then cut off mains cable, flush with the appliance. Dispose of these parts separately to ensure that the appliance can no longer be plugged into a mains socket.

Disposal of old electrical appliances

The European Directive 2002/96/EC on Waste Electrical and Electronic Equipment (WEEE), requires that old household electrical appliances must not be disposed of in the normal unsorted municipal waste stream. Old appliances must be collected separately in order to optimise the recovery and recycling of the materials they contain and reduce the impact on human health and the environment.

The crossed out "wheeled bin" symbol on the product reminds you of your obligation, that when you dispose of the appliance it must be separately collected.

Consumers should contact their local authority or retailer for information concerning the correct disposal of their old appliance.

Comparative Programmes

- Programmes recommended for comparative test to EN61121

| Programme (EN61121) | Programme to select | Load size | Heat Setting |
|---------------------|--|-----------|--------------|
| Dry Cotton | Cottons Cupboard Dry  | 8 kg | High |
| Iron Dry Cotton | Cottons Iron Dry  | 8 kg | High |
| Easy-care textile | Synthetics  | 3 kg | Low |

! Note: This is not a full list of programme options (*see Start and Programmes*).

This appliance conforms to the following EC Directives:
- 2006/95/EC (Low Voltage Equipment)
- 89/336/EEC, 92/31/EEC and 93/68/EEC (Electromagnetic Compatibility)

Guarantee

12 months Parts and Labour Guarantee

Your appliance has the benefit of our manufacturer's guarantee, which covers the cost of breakdown repairs for twelve months from the date of purchase.

This gives you the reassurance that if, within that time, your appliance is proven to be defective because of either workmanship or materials, we will, at our discretion, either repair or replace the appliance at no cost to you.

The guarantee is subject to the following conditions:

- The appliance has been installed and operated correctly and in accordance with our operating and maintenance instructions.
- The appliance is only used on the electricity or gas supply printed on the rating plate.
- The appliance has been used for normal domestic purposes only.
- The appliance has not been altered, serviced, maintained, dismantled or otherwise interfered with by any person not authorised by us.
- Any repair work must be undertaken by us or our appointed agent.
- Any parts removed during repair work or any appliance that is replaced become our property.
- The appliance is used in the United Kingdom or Republic of Ireland.

The guarantee does not cover:

- Damage resulting from transportation, improper use, neglect or interference or as a result of improper installation.
- Replacement of any consumable item or accessory. These include but are not limited to: plugs, cables, batteries, light bulbs, fluorescent tubes and starters, covers and filters.
- Replacement of any removable parts made of glass or plastic.

THE GUARANTEE WILL NOT APPLY IF THE APPLIANCE HAS BEEN USED IN COMMERCIAL OR NON-DOMESTIC PREMISES.

5 Year Parts Guarantee

Hotpoint also offers you a FREE 5 year parts guarantee. This additional guarantee is conditional on you registering your appliance with us and the parts being fitted by one of our authorised engineers. There will be a charge for our engineer's time.

To activate the extra parts warranty on your appliance, simply call our registered line on **08448 24 24 24 (Republic of Ireland 01 230 0800)**

Extended Guarantees

We offer a selection of protection plans that enable you to fully cover yourself against the expense of repair bills for the life of your policy. To find the ideal plan for you please call our advice line on **08448 226 226 (Republic of Ireland 01 230 0233)**

Free Helpdesk Service

We have a dedicated team who can provide free advice and assistance with your appliance if you experience any technical difficulties within the first 90 days of ownership. Simply call our Hotpoint Service Hotline on **08448 224 224 (Republic of Ireland 0818 313 413)** for telephone assistance, or, where necessary, to arrange for an engineer to call.
