## Standard Features

### Rack Airflow Requirements

#### Rack 10000 series Cabinets

The increasing power of new high-performance processor technology requires increased cooling efficiency for rack-mounted servers. The 10000 Series Racks provide enhanced airflow for maximum cooling, allowing these racks to be fully loaded with servers using the latest processors.

**CAUTION:** If a third-party rack is used, observe the following additional requirements to ensure adequate airflow and to prevent damage to the equipment:

- **Front and rear doors:** If your 42U server rack includes closing front and rear doors, you must allow 5,350 sq cm (830 square inches) of hole evenly distributed from top to bottom to permit adequate airflow (equivalent to the required 64 percent open area for ventilation).
- **Side:** The clearance between the installed rack component and the side panels of the rack must be a minimum of 7 cm (2.75 inches).

**CAUTION:** Always use blanking panels to fill all remaining empty front panel U-spaces in the rack. This arrangement ensures proper airflow. Using a rack without blanking panels results in improper cooling that can lead to thermal damage.

**NOTE:** For additional information, refer to the Setup and Installation Guide or the Documentation CD provided with the server, or to the server documentation located in the Support section at the following URL: <http://www5.hp.com/products/servers/proliantdl585/index.html>.

### Rack Mounting Requirements

HP ProLiant DL585 rack models provide tool-free support for square hole racks (including Compaq/HP 7000, 9000, 10000 and H9 series) with an adjustment range from 28" - 29" in depth.

## Memory

**NOTE:** Memory configurations listed do not apply to "Factory Integrated Models."

### HP ProLiant DL585 2P Models

#### Standard Memory

- 4GB PC3200 Double Data Rate (DDR) SDRAM (Registered SDRAM) memory running at 400MHz or
- 2GB PC2100 Double Data Rate (DDR) SDRAM (Registered SDRAM) memory running at 266MHz or
- 2GB PC2700 Double Data Rate (DDR) SDRAM (Registered SDRAM) memory running at 333MHz with Advanced ECC

#### Rules:

- Must install a minimum of 2 DIMMs in the processor memory board in slot 2
- DIMMs on a processor memory board must be installed in pairs and in bank order
- All DIMMs on a processor memory board must be of the same size (512 MB, 1 GB, or 2 GB)
- Each processor memory board can have different amounts of memory, ex. Processor memory board 2 = (4) 1 GB, Processor memory board 1 = (2) 512 MB, Processor memory board 4 = no memory
- PC2700 memory support requires -002 processor board
- 333MHz memory performance requires no more than 6 PC2700 DIMMs per processor board; any more will result in the memory slowing down to 266MHz
- PC3200 memory, running at 400MHz will be supported on a PC3200-only processor board (012567-001) with 4 DIMM slots, resulting in a system max of 32GB with 4 processors

The following memory options are available from HP:

1GB of PC2100 DDR SDRAM DIMM Memory Kit (2x512 MB)	300679-B21
