Safety Instructions

Integrated circuits on computer boards are sensitive to static electricity. To avoid damaging chips from electrostatic discharge, observe the following precautions:

- Do not remove boards or integrated circuits from their anti-static packaging until you are ready to install them.
- Before handling a board or integrated circuit, touch an unpainted portion of the system unit chassis for a few seconds. This helps to discharge any static electricity on your body.
- Wear a wrist-grounding strap, available from most electronic component stores, when handling boards and components. Fasten the ALLIGATOR clip of the strap to the end of the shielded wire lead from a grounded object. Please wear and connect the strap before handling the HS-7238 to protect yourself from the discharge of any static electricity through the strap.
- Please use an anti-static pad when putting down any components or parts or tools outside the computer. You may also use an anti-static bag instead of the pad. Please inquire from your local supplier for additional assistance in finding the necessary anti-static gadgets.
- **NOTE:** DO NOT TOUCH THE BOARD OR ANY OTHER SENSITIVE COMPONENT WITHOUT ALL NECESSARY ANTI-STATIC PROTECTION.

Chapter 1

General Description

The HS-7238 is an Intel[®] 82845GV/82801DB chipset-based board designed for PCI-ISA Bus PGA 478 Intel[®] Pentium[®] 4 up to 2.8GHz CPU compatibility. The combination of these features makes the HS-7238 an ideal all-in-one industrial single board computer. Additional features include an enhanced I/O with DVI/CRT, dual LAN, wireless LAN, audio and USB2.0 port interface.

Its onboard ATA/33/66/100 connected to IDE drive interface architecture allows the HS-7238 to support data transfers of 33, 66 or 100MB/sec. for each IDE drive connection. Designed with the Intel[®] 82845GV/82801DB core logic chipset, the board supports all PGA 478 Pentium[®] 4 CPU series operating up to 2.8GHz. The display controller is Intel 82845GV with 1MB or 8MB (default) memory supporting CRT display up to 1920 x 1200 x 32-bit at 60Hz. It also provides DVI display interface.

System memory is also sufficient with the one DDR socket that can support up to 512MB.

Additional onboard connectors include an advanced USB2.0 port providing faster data transmission, and two external RJ-45 connectors for use of two 10/100 Base-TX Ethernet interfaces.

1.1 Major Features

The HS-7238 comes with the following features:

- > PGA 478 for Intel[®] Pentium[®] 4 up to 2.8GHz CPU
- Mini PCI Local Bus support (optional)
- > One DDR socket with a max. capacity of 512MB
- Intel 82845GV/82801DB system chipset
- Winbond W83627 and ITE IT8888 super I/O chipset
- Intel[®] 82845GV CRT display controller
- Intel[®] 82559 and Intel[®] 82562 10/100 Based LAN
- > AC97 3D audio controller
- Fast PCI ATA/33/66/100 IDE controller
- Two COM, two USB2.0 connectors
- Supports Hardware Monitor
- Supports DVI display (optional)
- Supports wireless LAN module (optional)

1.2 Specifications

- **CPU:** PGA 478 for Intel[®] Pentium[®] 4 up to 2.8GHz CPU
- Bus Interface: PCI-ISA Bus and Mini PCI Local Bus support (no 3.3V output through goldfinger)
- Memory: One DDR socket supporting up to 512MB
- Chipset: Intel[®] 82845GV/82801DB
- I/O Chipset: Winbond W83627, ITE IT8888
- VGA: Intel[®] 82845GV with 1MB or 8MB supporting CRT display up to 1920 x 1200 x 32-bit at 60Hz
- DVI: Supports DVI display (optional)
- LAN: Intel[®] 82559 and Intel[®] 82562 10/100 Based LAN
- Wireless LAN: Supports wireless LAN module (optional)
- Audio: AC97 3D audio controller
- IDE: Four IDE disk drives supporting ATA/33/66/100 with transfer rates of up to 33/66/100MB/sec.
- **FDD:** Supports up to two floppy disk drives
- Parallel: One enhanced bi-directional parallel port supporting SPP/ECP/EPP
- Serial Port: 16C550 UART-compatible RS-232 x 2 serial ports with 16-byte FIFO
- USB: Two USB2.0 connectors
- Keyboard/Mouse: PS/2 6-pin Mini DIN
- BIOS: Award PnP Flash BIOS
- Watchdog Timer: Software programmable time-out intervals from 1~256sec.
- **CMOS:** Battery backup
- Power Connector: One 4-pin and one 20-pin ATX power connectors
- **Temperature:** 0~60°C (operating)
- Hardware Monitor: Winbond W83627
- Board Size: 18.6 x 12.2 cm

1.3 Board Dimensions

Chapter 2

Unpacking

2.1 Opening the Delivery Package

The HS-7238 is packed in an anti-static bag. The board has components that are easily damaged by static electricity. Do not remove the anti-static wrapping until proper precautions have been taken. Safety Instructions in front of this manual describe anti-static precautions and procedures.

2.2 Inspection

After unpacking the board, place it on a raised surface and carefully inspect the board for any damage that might have occurred during shipment. Ground the board and exercise extreme care to prevent damage to the board from static electricity.

Integrated circuits will sometimes come out of their sockets during shipment. Make sure all integrated circuits, particularly the BIOS, processor, memory modules, ROM-Disk, and keyboard controller chip are firmly seated. The HS-7238 delivery package contains the following items:

- HS-7238 Board x 1
- Utility CD Disk x 1
- ATA/100 IDE flat cable x 2
- FDD flat cable x 1
- Printer cable with bracket x 1
- Two RS-232 COM Port cable with bracket x 1
- 8-pin USB split type cable with bracket x 1
- PS/2 KB/MS transfer cable x 1
- MIC/Audio 8-pin cable x 1
- Cooling Fan & HeatSink x 1
- Jumper Bag x 1
- User's Manual

It is recommended that you keep all the parts of the delivery package intact and store them in a safe/dry place for any unforeseen event requiring the return shipment of the product. In case you discover any missing and/or damaged items from the list of items, please contact your dealer immediately.

Chapter 3

Hardware Installation

This chapter provides the information on how to install the hardware using the HS-7238. This chapter also contains information related to jumper settings of switch, watchdog timer etc.

3.1 Before Installation

After confirming your package contents, you are now ready to install your hardware. The following are important reminders and steps to take before you begin with your installation process.

- 1. Make sure that all jumper settings match their default settings and CMOS setup correctly. Refer to the sections on this chapter for the default settings of each jumper. (Set JP2 1-2)
- 2. Go through the connections of all external devices and make sure that they are installed properly and configured correctly within the CMOS setup. Refer to the sections on this chapter for the detailed information on the connectors.
- 3. Keep the manual and diskette in good condition for future reference and use.
- 4. Make sure your power supply is using for P4 only. One of 4-pin connectors is for +12V lead which should connect to PW2 connector of HS-7238.
- **NOTE:** Since AD22 has been assigned for ISA bridge at HS-7238, please make sure do not use this address for other PCI cards to avoid confliction. In order to get detailed information, please contact technical support engineer.

3.2 Board Layout

3.3 Jumper List

Jumper	Default Setting	Setting	Page

3.5 Configuring the CPU

The HS-7238 offers the convenience in CPU installation with its auto-detect feature. After installing a new microprocessor onboard, the HS-7238 automatically identifies the frequency and clock speed of the installed microprocessor chip, thereby eliminating the need for user to do additional CPU configuration or hardware settings related to it.

• JP1: Clock Speed Select

Setting	Description
1-2 Short	Auto Select
2-3 Short	100MHz
None	133MHz

3.6 System Memory

The HS-7238 provides one DDR socket at location *DM1*. The maximum capacity of the onboard memory is 512MB.

3.7 VGA Controller

The onboard Intel 82845GV with 1MB or 8MB memory supports CRT display up to $1920 \times 1200 \times 32$ -bit at 60Hz. The HS-7238 provides two methods of connecting VGA device. *CN11* offers a single standard CRT connector (DB15), or DVI connector.

• CN11: 15-pin CRT Connector (DB15)

3.14 CMOS Data Clear

The HS-7238 has a Clear CMOS jumper on JP2.

• JP2: Clear CMOS

Options	Settings	
Normal Operation (default)	Short 1-2	1
Clear CMOS	Short 2-3	

IMPORTANT: Before you turn on the power of your system, please set JP2 to short 1-2 for normal operation.

3.15 Power and Fan Connectors

HS-7238 provides one 20-pin and one 4-pin ATX power connectors at *PW1* and *PW2*.

HS-7238 must use P4 power supply. One of 4-pin connectors is for +12V lead which should be connected to PW2.

20-pin ATX Power Connector can be connected to Backplane or to *PW1*.

3.19 Watchdog Timer

Once the Enable cycle is active, a Refresh cycle is requested before the time-out period. This restarts counting of the WDT period. When the time counting goes over the period preset of WDT, it will assume that the program operation is abnormal. A System Reset signal will re-start when such error happens.

The following sample programs show how to Enable, Disable and Refresh the Watchdog Timer:

	0	
,		n mode, interruptible double-write
, MOV MOV OUT	DX, 2EH AL, 87H DX, AL	
OUT MOV	DX, AL DX, 2EH	
MOV OUT MOV	AL, 07H DX, AL DX, 2FH	
MOV OUT	AL, 08H DX, AL	
MOV MOV OUT	DX, 2EH AL, F5H DX, AL	: select CRF0
MOV	DX, 2FH AL, 80H	, Select CAPU
	DX, AL DX, 2EH	
MOV OUT MOV	AL, F7H DX, AL DX, 2FH	
MOV OUT	AL, 00H DX, AL	

MOV	DX, 2EH	
MOV	AL, F6H	
OUT	DX, AL	
MOV	DX, 2FH	
MOV	AL, 00H	; * 00H=Disabled
OUT	DX, AL	
;		
; Exit extend	ed function mode	

, Exit extended function mode

MOV	DX, 2EH
MOV	AL, AAH
OUT	DX, AL

* User can also use AL, 00H's defined time for reset purposes, e.g.00H for Disable, 01H = 1sec, 02H = 2sec.....FFH = 255sec.

3.20 Audio Connectors

The HS-7238 has an onboard AC97 3D audio interface. The following tables list the pin assignments of the CD-ROM Analog Input, the Line In and the MIC In/Line Out connectors.

• CD1: CD-ROM Analog Input Connector

PIN	Description	1 2 3 4
1	CD_R	
2	CD_REF	
3	CD_REF	
4	CD_L

Chapter 4

Award BIOS Setup

The HS-7238 uses Award BIOS for the system configuration. The Award BIOS setup program is designed to provide the maximum flexibility in configuring the system by offering various options that could be selected for end-user requirements. This chapter is written to assist you in the proper usage of these features.

4.1 Starting Setup

The Award BIOS is immediately activated when you first power on the computer. The BIOS reads the system information contained in the CMOS and begins the process of checking out the system and configuring it. When it finishes, the BIOS will seek an operating system on one of the disks and then launch and turn control over to the operating system.

While the BIOS is in control, the Setup program can be activated in one of two ways:

- 1. By pressing immediately after switching the system on, or
- 2. By pressing the key when the following message appears briefly at the bottom of the screen during the POST (Power On Self Test).

Press DEL to enter SETUP.

If the message disappears before you respond and you still wish to enter Setup, restart the system to try again by turning it OFF then ON or pressing the "RESET" button on the system case. You may also restart by simultaneously pressing <Ctrl>, <Alt>, and <Delete> keys. If you do not press the keys at the correct time and the system does not boot, an error message will be displayed and you will again be asked to...

PRESS F1 TO CONTINUE, DEL TO ENTER SETUP

4.2 Using Setup

In general, you use the arrow keys to highlight items, press <Enter> to select, use the <PageUp> and <PageDown> keys to change entries, press <F1> for help and press <Esc> to quit. The following table provides more detail about how to navigate the Setup program using the keyboard.

Up arrow	Move to previous item
Down arrow	Move to next item
Left arrow	Move to the item in the left hand
Right arrow	Move to the item in the right hand
Esc key	Main Menu Quit and not save changes into CMOS
	Status Page Setup Menu and Option Page Setup Menu
	Exit current page and return to Main Menu
PgUp key	Increase the numeric value or make changes
PgDn key	Decrease the numeric value or make changes
+ key	Increase the numeric value or make changes
- key	Decrease the numeric value or make changes
F1 key	General help, only for Status Page Setup Menu and Option
	Page Setup Menu
(Shift)F2 key	Change color from total 16 colors. F2 to select color
	forward, (Shift) F2 to select color backward
F3 key	Calendar, only for Status Page Setup Menu
F4 key	Reserved
F5 key	Restore the previous CMOS value from CMOS, only for
	Option Page Setup Menu
F6 key	Load the default CMOS value from BIOS default table, only
	for Option Page Setup Menu
F7 key	Load the default
F8 key	Reserved
F9 key	Reserved
F10 key	Save all the CMOS changes, only for Main Menu

4.2.1 Getting Help

Press F1 to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item. To exit the Help Window press <Esc> or the F1 key again.

4.3 Main Menu

Once you enter the Award BIOS CMOS Setup Utility, the Main Menu will appear on the screen. The Main Menu allows you to select from several setup functions and two exit choices. Use the arrow keys to select among the items and press <Enter> to enter the sub-menu.

4.4 Standard CMOS Features

The Standard Setup is used for the basic hardware system configuration. The main function is for Data/Time and Floppy/Hard Disk Drive settings. Please refer to the following screen for the setup. When the IDE hard disk drive you are using is larger than 528MB, you must set the HDD mode to **LBA** mode. Please use the IDE Setup Utility in BIOS SETUP to install the HDD correctly.

4.6 Advanced Chipset Features

This section allows you to configure the system based on the specific features of the installed chipset. This chipset manages bus speeds and the access to the system memory resources, such as DRAM and the external cache. It also coordinates the communications between the conventional ISA and PCI buses. It must be stated that these items should never be altered. The default settings have been chosen because they provide the best operating conditions for your system. You might consider making any changes only if you discover that the data has been lost while using your system.

4.7 Integrated Peripherals

The IDE hard drive controllers can support up to two separate hard drives. These drives have a master/slave relationship that is determined by the cabling configuration used to attach them to the controller. Your system supports two IDE controllers--a primary and a secondary--so you can install up to four separate hard disks.

PIO means Programmed Input/Output. Rather than having the BIOS issue a series of commands to affect the transfer to or from the disk drive, PIO allows the BIOS to tell the controller what it wants and then let the controller and the CPU perform the complete task by themselves. This is much simpler and more efficient (also faster).

4.9 PnP/PCI Configurations

This section describes the configuration of the PCI bus system. PCI, or **P**eripheral **C**omponents Interconnect, is a system that allows I/O devices to operate at speeds nearing the speed the CPU itself uses when communicating with its own special components. This section covers some very technical items and it is strongly recommended that only experienced users should make any changes to the default settings.

4.12 Load Fail-Safe Defaults

When you press <Enter> on this item you will get a confirmation dialog box with a message shown below. This option allows you to load/restore the BIOS default values permanently stored in the BIOS ROM. Pressing 'Y' loads the BIOS default values for the most stable, minimal-performance system operations.

CMOS Setup Utility-Copyright ©1984-2001 Award Software

4.13 Load Optimized Defaults

When you press <Enter> on this item you get a confirmation dialog box with a message similar to the figure below. This option allows you to load/restore the default values to your system configuration, optimizing and enabling all high performance features. Pressing 'Y' loads the default values that are factory settings for optimal performance system operations.

CMOS Setup Utility-Copyright ©1984-2001 Award Software

4.14 Set Supervisor/User Password

CMOS Setup Utility-Copyright ©1984-2001 Award Software

Esc : Quit $\land \lor \to \leftarrow$: Select Item			
F10 : Save & Exit Setup			
Change / Set / Disable Password			

You can set either supervisor or user password, or both of them. The differences between are:

- supervisor password: can enter and change the options of the setup menus.
- user password: just can only enter but do not have the right to change the options of the setup menus.

When you select this function, the following message will appear at the center of the screen to assist you in creating a password.

ENTER PASSWORD:

Type the password, up to eight characters in length, and press <Enter>. The password typed now will clear any previously entered password from CMOS memory. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password.

To disable a password, just press <Enter> when you are prompted to enter the password. A message is confirmed and the password will be disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

PASSWORD DISABLED.

When a password has been enabled, you will be prompted to enter it every time you try to enter Setup. This prevents an unauthorized person from changing any part of your system configuration.

Additionally, when a password is enabled, you can also require the BIOS to request a password every time your system is rebooted. This would prevent unauthorized use of your computer.

You determine when the password is required within the BIOS Features Setup Menu and its Security option (see Section 3). If the Security option is set to "System", the password will be required both at boot and at entry to Setup. If set to "Setup", prompting only occurs when trying to enter Setup.

4.15 Save & Exit Setup

Press <Enter> on this item for confirmation:

Pressing "Y" stores the selections made in the menus in CMOS – a special section of memory that stays on after you turn your system off. The next time you boot your computer, the BIOS configures your system according to the Setup selections stored in CMOS. After saving the values the system is restarted again.

Chapter 5

Software Utilities

This chapter contains the detailed information of IDE, VGA, LAN and Audio driver installation procedures. The utility disk that come with the delivery package contains an auto-run program that invokes the installation programs for the IDE, VGA, LAN and Audio drivers. The following sections describe the installation procedures of each driver based on Win 95/98, Win 2000 and Win NT operating systems. It is recommended that you install the drivers matching the sections listed in this chapter.

5.1 IDE Driver Installation

5.1.1 Installing Intel Chipset Software Utility

1. Insert Utility CD Disk to your CD ROM drive. The main menu will pop up as shown below. Select on the **HS-7238** button to launch the installation program.

Click on the **ICH4 Driver** button to continue.

3. Immediately after clicking the IDE button in Step 1, the program launches the InstallShield Wizard that will assist you in the installation process. Click on the **Next** > button to proceed.

2.

5.5 USB2.0 Driver Installation

5.5.1 Win 98

 With the Utility CD Disk still in your CD ROM drive, right click on "My Computer" icon from the Windows menu. Select on System Properties and then proceed to the Device Manager from the main menu.

2. Select on Other Devices from the list of devices then double-click on PCI Universal Serial Bus.

3. The PCI Universal Serial Bus Properties screen then appears, allowing you to re-install the driver. Select Driver from the main menu to proceed.

 When the dialog box below appears, make sure you close all other Windows applications then click on the <u>Next</u> > button to proceed.

	This wizard searches for updated drivers for: PCI Universal Serial Bus
	A device driver is a software program that makes a hardware device work.
	Upgrading to a newer version of a device driver may improve the performance of your hardware device or add functionality.
<u> </u>	

5. Tick on the "Search for a better driver" once the following screen appears. Click on the **Next** to proceed.

 What do you want Windows to do? Search for a better driver than the one your device is using now. (Recommended) Display a list of all the drivers in a specific location, so you can select the driver you want.
 < <u>B</u> ack Next> Cancel

6. Once the program returns to the Add New Hardware Wizard screen, your specified location will appear. Press on the **Next** button to continue

	Windows will search for updated drivers in its driver database on your hard drive, and in any of the following selected locations. Click Next to start the search.
	Floppy disk drives
K	D-ROM drive
%	■ Microsoft Windows Update
	Specify a location:
	D:\USB20\WIN9X
\sim	Browse
	<back next=""> Cancel</back>

 When Setup finds the information it needs about the new driver, it will display the device it found on the following screen. Press on the <u>Next</u> button to accept and proceed.

8. Once the InstallShield Wizard completes the operation and update of your USB2.0 driver. Click on the **<u>F</u>inish** button to complete the installation process.

5.5.2 Win 2000

- With the Utility CD Disk still in your CD ROM drive, right click on "My Computer" icon from the Windows menu. Select on System Properties and then proceed to the Device Manager from the main menu.
- 2. Select on Other Devices from the list of devices then double-click on PCI Universal Serial Bus.

3. The PCI Universal Serial Bus Properties screen then appears, allowing you to re-install the driver. Select Driver from the main menu to proceed.

 When the dialog box below appears, make sure you close all other Windows applications then click on the <u>Next</u> > button to proceed.

5. Tick on the "Search for a suitable driver" once the following screen appears. Click on the **Next** to proceed.

 Once the program returns to the Add New Hardware Wizard screen, your specified location will appear. Press on the <u>Next</u> button to continue

Locate Driver Files Where do you want Windows to searc	h for diver files?
